8   Prebuilt

A   Frequently Asked Questions

Preface

Audience

This document is intended for NetSuite Analytics Warehouse consumers and authors using the Services to run a business..

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at `http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc`.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit `http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info` or visit `http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs` if you are hearing impaired.

Diversity and Inclusion

Oracle is fully committed to diversity and inclusion. Oracle respects and values having a diverse workforce that increases thought leadership and innovation. As part of our initiative to build a more inclusive culture that positively impacts our employees, customers, and partners, we are working to remove insensitive terms from our products and documentation. We are also mindful of the necessity to maintain compatibility with our customers' existing technologies and the need to ensure continuity of service as Oracle's offerings and industry standards evolve. Because of these technical constraints, our effort to remove insensitive terms is ongoing and will take time and external cooperation.

Conventions

The following text conventions are used in this document.

Convention	Meaning
boldface	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.
italic	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
`monospace`	Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

1
Introduction

Overview

This guide lists the predefined objects in NetSuite Analytics Warehouse. You can find information about tables, entity relationships, subject area, duty roles, associated business questions, metric details, prebuilt analyses, prebuilt KPIs, and prebuilt decks and cards.

2

Tables

Overview

This section provides details of tables such as key columns, data types, and table descriptions. Use the "Referred Table" and "Referred Column" information to decide on the join condition between Fact and Dimension tables.

Download this ZIP file that contains available tables that apply to the current version of Oracle NetSuite Analytics Warehouse. Once the file downloads, extract the file, open the folder, and then open the release-specific Index.html file. For example, click **22.R3_Aug2022_Fusion_NS_Analytics_Tables.html**.

3

Relationship Diagrams

Overview

This chapter provides diagrams that define the logical relationship of a Fact table with different dimension tables. Refer to the Tables section for information regarding the join conditions between the Fact tables and dimensions.

Download this ZIP file that contains available diagrams that apply to the current version of Oracle NetSuite Analytics Warehouse. Once the file downloads, extract the file, open the folder, and then open the release-specific HTML file. For example, click **22.R3_Aug2022_Fusion_NS_Analytics_Diagrams.html**.

4

Data Store

Overview

Enrich your reports by choosing specific columns from various view objects (VOs) from the Oracle Applications Cloud data sources.

You can select various datasets (under functional areas) to create a data pipeline activation plan. That enables you to seamlessly extract and load data from NetSuite and make it readily available in the autonomous data warehouse tables. You can then use the data for visualization and analysis.

Data Store Spreadsheet

Use this spreadsheet that contains available BI Objects for extraction using Data Enrichment in NetSuite Analytics Warehouse.

5

Data Lineage

Overview

This section provides an end-to-end data lineage summary report for physical and logical relationships.

You can select the subject area for each of the NetSuite Analytics Warehouse products and review the data lineage details. This enables you to understand the column and table lineage from the presentation layer to physical layer.

Data Lineage Spreadsheet

Use this spreadsheet that contains NetSuite Analytics Warehouse Data Lineage details.

6

Data Augmentation

Overview

Entities are key concepts or building blocks for implementing business processes in any NetSuite application. NetSuite Analytics Warehouse extracts data for key entities and makes the data available in analysis-friendly data models (tables). Internally, NetSuite Analytics Warehouse keeps track of the tables that capture entity details, as well as tables with references for entities. When the data augmentation framework adds attributes that aren't part of the predefined data model, users see the new information as new attributes associated with the relevant tables. The Entity ID is the set of unique attributes that identifies the entity.

Data Augmentation Spreadsheet

Use this spreadsheet that contains Entities and Entity ID mapping details. Select "Entity" in the data augmentation flow.

7

Subject Areas

Subject Areas

Overview

This section provides information on the subject areas with data you maintain in NetSuite Analytics Warehouse.

Download this ZIP file that contains available subject area information that applies to the current version of NetSuite Analytics Warehouse. Once the file downloads, extract the file, open the folder, and then open the release-specific HTML file. For example, click **22.R3_Aug2022_Fusion_NS_Analytics_SubjectAreas.html**.

These subject areas, with their corresponding data, are available for you to use when creating and editing analyses and reports. The information for each subject area includes:

- Description of the subject area.

- Business questions that you can answer by data in the subject area, with a link to more detailed information about each business question.

- Duty roles that you can use to secure secure access to the subject area, with a link to more detailed information about each duty role.

- Primary navigation to the work area representing the subject area.

- Time reporting considerations for using the subject area, such as whether the subject area reports historical data or only the current data. Historical reporting refers to reporting on historical transactional data in a subject area. With a few exceptions, all dimensional data are current as of the primary transaction dates or system date.

- The lowest grain of transactional data in a subject area. The lowest transactional data grain determines how data are joined in a report.

- Special considerations, tips, and things to look out for when you use use the subject area to create analyses and reports.

Business Questions

Overview

For each business question in this section, links are provided for more detailed information about the subject areas and duty roles associated with the business question.

Download this ZIP file that contains available business questions that apply to the current version of NetSuite Analytics Warehouse. Once the file downloads, extract the file, open the

folder, and then open the release-specific HTML file. For example, click
22.R3_Aug2022_Fusion_NS_Analytics_BusinessQuestions.html.

Duty Roles

Overview

For each duty role in this section, links are provided for more detailed information about the subject areas and business questions associated with the duty role.

Download this ZIP file that contains available duty roles that apply to the current version of NetSuite Analytics Warehouse. Once the file downloads, extract the file, open the folder, and then open the release-specific HTML file. For example, click **22.R3_Aug2022_Fusion_NS_Analytics_DutyRoles.html**.

Subject Area Metric Details

Overview

These tables describe GL metrics.

NetSuite — Assembly Build

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. Exchange rate date basis is the assembly build date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Assembly Builds	This is a derived metric that is available to be used to describe a transaction under the Assembly Build subject area. This specific attribute is derived by count of the total number of assembly builds.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the Assembly Build subject area. This specific attribute can be used to describe the amount in total in transaction currency.
Outsourcing Charge Unit Price in Transaction Currency	This is a metric that can be used to describe a transaction under the Assembly Build subject area. Outsourcing charge is the cost associated with an outsourced step in a work order.This specific attribute can be used to describe the outsourcing charge per unit price in transaction currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the assembly builds subject area. This specific attribute can be used to describe the total amount in base currency.

Metric	Metric Definition
Outsourcing Charge Unit Price in Base Currency	This is a metric that can be used to describe a transaction under the Assembly Builds subject area. Outsourcing charge is the cost associated with an outsourced step in a work order. This specific attribute can be used to describe the total amount in analytics currency.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the assembly builds subject area. This specific attribute can be used to describe the total amount in analytics currency.
Outsourcing Charge Unit Price in Analytics Currency	This is a metric that can be used to describe a transaction under the assembly build subject area. Outsourcing charge is the cost associated with an outsourced step in a work order. This specific attribute can be used to describe the total amount in analytics currency.
Total Number of Assembly Build Lines	This is a derived metric that can be used to describe a transaction line under the assembly builds subject area. This specific attribute is derived by count of the total number of assembly builds for each line item.
Item Quantity	This is a metric that is available to be used to describe a transaction line under the assembly build subject area. This specific attribute can be used to describe the item quantity per transaction line
Item Rate in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the assembly build subject area. This specific attribute can be used to describe the item rate for each line item in transaction currency.
Item Net Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the assembly build subject area. This specific attribute can be used to describe the net amount for each line item in transaction currency.
Line Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the assembly build subject area. This specific attribute can be used to describe the amount for each line item in transaction currency.
Credit Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the assembly build subject area. This specific attribute can be used to describe the amount credited for each line item in transaction currency.
Debit Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the assembly build subject area. This specific attribute can be used to describe the amount debited for each line item in transaction currency.
Line Amount in Base Currency	This is a metric that is available to be used to describe a transaction line under the assembly build subject area. This specific attribute can be used to describe the line amount for each line item in base currency.
Item Net Amount in Base Currency	This is a metric that is available to be used to describe a transaction line under the assembly build subject area. This specific attribute can be used to describe the net amount for each line item in base currency.

ORACLE®

Metric	Metric Definition
Credit Amount in Base Currency	This is a metric that is available to be used to describe a transaction line under the assembly build subject area. This specific attribute can be used to describe the amount credited for each line item in base currency.
Debit Amount in Base Currency	This is a metric that is available to be used to describe a transaction line under the assembly build subject area. This specific attribute can be used to describe the amount debited for each line item in base currency.
Line Amount in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the assembly build subject area. This specific attribute can be used to describe the amount for each line item in analytics currency.
Item Net Amount in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the assembly build subject area. This specific attribute can be used to describe the net amount for each line item in analytics currency.
Credit Amount in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the assembly build subject area. This specific attribute can be used to describe the amount credited for each line item in analytics currency.
Debit Amount in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the assembly build subject area. This specific attribute can be used to describe the amount debited for each line item in analytics currency.
Accounting Book Credit Amount	This is a metric that is available to be used to describe a transaction line under the assembly build subject area. This specific attribute can be used to describe the accounting book credit amount for each line item in accounting book currency amounts.
Accounting Book Debit Amount	This is a metric that is available to be used to describe a transaction line under the assembly build subject area. This specific attribute can be used to describe the accounting book debit amount for each line item in accounting book currency amounts.

NetSuite — Assembly Unbuild

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. Exchange rate date basis is the assembly unbuild date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Assembly Unbuilds	This is a derived metric that is available to be used to describe a transaction under the Assembly unbuild subject area. This specific attribute is derived by count of the total number of assembly unbuilds.

Metric	Metric Definition
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the Assembly unbuild subject area. This specific attribute can be used to describe the amount in total in transaction currency.
Outsourcing Charge Unit Price in Transaction Currency	This is a metric that can be used to describe a transaction under the Assembly unbuild subject area. Outsourcing charge is the cost associated with an outsourced step in a work order. This specific attribute can be used to describe the outsourcing charge per unit price in transaction currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the assembly unbuilds subject area. This specific attribute can be used to describe the total amount in base currency.
Outsourcing Charge Unit Price in Base Currency	This is a metric that can be used to describe a transaction under the Assembly unbuild subject area. Outsourcing charge is the cost associated with an outsourced step in a work order. This specific attribute can be used to describe the outsourcing charge per unit price in base currency.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the Assembly unbuild subject area. This specific attribute can be used to describe the amount in total in analytics currency.
Outsourcing Charge Unit Price in Analytics Currency	This is a metric that can be used to describe a transaction under the Assembly unbuild subject area. Outsourcing charge is the cost associated with an outsourced step in a work order. This specific attribute can be used to describe the outsourcing charge per unit price in analytics currency.
Total Number of Assembly Unbuild Lines	This is a derived metric that can be used to describe a transaction line under the assembly unbuilds subject area. This specific attribute is derived by the count of the total number of assembly unbuilds for each line item.
Item Quantity	This is a metric that is available to be used to describe a transaction line under the assembly unbuild subject area. This specific attribute can be used to describe the item quantity per transaction line
Item Rate in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the assembly unbuild subject area. This specific attribute can be used to describe the item rate for each line item in transaction currency.
Item Net Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the assembly unbuild subject area. This specific attribute can be used to describe the net amount for each line item in transaction currency.
Line Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the assembly unbuild subject area. This specific attribute can be used to describe the amount for each line item in transaction currency.
Credit Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the assembly unbuild subject area. This specific attribute can be used to describe the amount credited for each line item in transaction currency.

Metric	Metric Definition
Debit Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the assembly unbuild subject area. This specific attribute can be used to describe the amount debited for each line item in transaction currency.
Item Net Amount in Base Currency	This is a metric that is available to be used to describe a transaction line under the assembly unbuild subject area. This specific attribute can be used to describe the net amount for each line item in base currency.
Line Amount in Base Currency	This is a metric that is available to be used to describe a transaction line under the assembly unbuild subject area. This specific attribute can be used to describe the amount for each line item in base currency.
Credit Amount in Base Currency	This is a metric that is available to be used to describe a transaction line under the assembly unbuild subject area. This specific attribute can be used to describe the amount credited for each line item in base currency.
Debit Amount in Base Currency	This is a metric that is available to be used to describe a transaction line under the assembly unbuild subject area. This specific attribute can be used to describe the amount debited for each line item in base currency.
Item Net Amount in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the assembly unbuild subject area. This specific attribute can be used to describe the net amount for each line item in analytics currency.
Line Amount in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the assembly unbuild subject area. This specific attribute can be used to describe the amount for each line item in analytics currency.
Credit Amount in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the assembly unbuild subject area. This specific attribute can be used to describe the amount credited for each line item in analytics currency.
Debit Amount in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the assembly unbuild subject area. This specific attribute can be used to describe the amount debited for each line item in base currency.
Accounting Book Credit Amount	This is a metric that is available to be used to describe a transaction line under the assembly unbuild subject area. This specific attribute can be used to describe the accounting book credit amount for each line item in accounting book currency amounts.
Accounting Book Debit Amount	This is a metric that is available to be used to describe a transaction line under the assembly unbuild subject area. This specific attribute can be used to describe the accounting book debit amount for each line item in accounting book currency amounts.

NetSuite — Bin Putaway Worksheet

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation.

Exchange rate date basis is the work order date to convert to analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Bin Putaway Worksheets	This is a metric that can be used to describe a transaction under the NetSuite - Bin Putaway Worksheet.This specific attribute can be used to describe the Total Number of Bin Putaway Worksheets.
Total Number of Bin Putaway Worksheet Inventory Assignments	This is a metric that can be used to describe a transaction under the NetSuite - Bin Putaway Worksheet.This specific attribute can be used to describe the Total Number of Bin Putaway Worksheet Inventory Assignments.
Bin Item Quantity	This is a metric that can be used to describe a transaction under the NetSuite - Bin Putaway Worksheet.This specific attribute can be used to describe the Bin Item Quantity.

NetSuite — Bin Transfer

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. Exchange rate date basis is the work order date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Bin Transfers	This is a metric that can be used to describe a transaction under the NetSuite - Bin Transfer.This specific attribute can be used to describe the Total Number of Bin Transfers.
Total Number of Bin Transfer Inventory Assignments	This is a metric that can be used to describe a transaction under the NetSuite - Bin Transfer.This specific attribute can be used to describe the Total Number of Bin Transfer Inventory Assignments.
From Bin Item Quantity	This is a metric that can be used to describe a transaction under the NetSuite - Bin Transfer.This specific attribute can be used to describe the From Bin Item Quantity.
To Bin Item Quantity	This is a metric that can be used to describe a transaction under the NetSuite - Bin Transfer.This specific attribute can be used to describe the To Bin Item Quantity.

NetSuite - Cash Refund

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. Exchange rate date basis

ORACLE

is the Invoice date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Cash Refunds	This is a derived metric that can be used to describe a transaction under the cash refund subject area. This specific attribute is derived by the count of the total number of cash refunds.
Estimated Gross Profit Percent	This is a metric that can be used to describe a transaction under the cash refund subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the estimated gross profit percent.
Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction under the cash refund subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transaction currency.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the cash refund subject area. This specific attribute can be used to describe the total amount in transaction currency.
Total Cost Estimate in Transaction Currency	This is a metric that can be used to describe a transaction under the cash refund subject area. This specific attribute can be used to describe the total cost estimated in transaction currency.
Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction under the cash refund subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit percent in base currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the cash refund subject area. This specific attribute can be used to describe the total amount in base currency.
Total Cost Estimate in Base Currency	This is a metric that can be used to describe a transaction under the cash refund subject area. This specific attribute can be used to describe the total cost estimated in base currency.
Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction under the cash refund subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit in analytics currency.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the cash refund subject area. This specific attribute can be used to describe the total amount in analytics currency.

Metric	Metric Definition
Total Cost Estimate in Analytics Currency	This is a metric that can be used to describe a transaction under the cash refund subject area. This specific attribute can be used to describe the total cost estimated in analytics currency.
Total Number of Cash Refund Lines	This is a derived metric that can be used to describe a transaction line under the cash refund subject area. This specific attribute is derived by the count of the total number of cash refunds for each line item.
Item Quantity	This is a metric that is available to be used to describe a transaction line under the cash refund subject area. This specific attribute can be used to describe the item quantity per transaction line
Line Estimated Gross Profit Percent	This is a metric that is available to be used to describe a transaction line under the cash refund subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the estimated gross profit percent for each line item.
Cost Estimate in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the cash refund subject area. This specific attribute can be used to describe the cost estimate for each line item in transaction currency.
Cost Estimate Rate in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the cash refund subject area. This specific attribute can be used to describe the cost estimate rate for each line item in transaction currency.
Credit Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the cash refund subject area. This specific attribute can be used to describe the amount credited for each line item in transaction currency.
Debit Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the cash refund subject area. This specific attribute can be used to describe the amount debited for each line item in transaction currency.
Line Estimated Gross Profit in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the cash refund subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for each line item in transaction currency.
Line Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the cash refund subject area. This specific attribute can be used to describe the amount for each line item in transaction currency.
Net Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the cash refund subject area. This specific attribute can be used to describe the net amount for each line item in transaction currency.
Item Rate in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the cash refund subject area. This specific attribute can be used to describe the item rate for each line item in transaction currency.

ORACLE®

Metric	Metric Definition
Accounting Line Credit Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the cash refund subject area. This specific attribute can be used to describe the accounting credit line amount for each line item in transaction currency.
Accounting Line Debit Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the cash refund subject area. This specific attribute can be used to describe the accounting debit line amount for each line item in transaction currency.
Line Amount in Base Currency	This is a metric that is available to be used to describe a transaction line under the cash refund subject area. This specific attribute can be used to describe the amount for each line item in base currency.
Cost Estimate in Base Currency	This is a metric that is available to be used to describe a transaction line under the cash refund subject area. This specific attribute can be used to describe the cost estimate for each line item in base currency.
Cost Estimate Rate in Base Currency	This is a metric that is available to be used to describe a transaction line under the cash refund subject area. This specific attribute can be used to describe the cost estimate rate for each line item in base currency.
Credit Amount in Base Currency	This is a metric that is available to be used to describe a transaction line under the cash refund subject area. This specific attribute can be used to describe the amount credited for each line item in base currency.
Debit Amount in Base Currency	This is a metric that is available to be used to describe a transaction line under the cash refund subject area. This specific attribute can be used to describe the amount debited for each line item in base currency.
Line Estimated Gross Profit in Base Currency	This is a metric that is available to be used to describe a transaction line under the cash refund subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for each line item in base currency.
Net Amount in Base Currency	This is a metric that is available to be used to describe a transaction line under the cash refund subject area. This specific attribute can be used to describe the net amount for each line item in base currency.
Item Rate in Base Currency	This is a metric that is available to be used to describe a transaction line under the cash refund subject area. This specific attribute can be used to describe the item rate for each line item in base currency.
Cost Estimate in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the cash refund subject area. This specific attribute can be used to describe the cost estimate for each line item in analytics currency.
Cost Estimate Rate in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the cash refund subject area. This specific attribute can be used to describe the cost estimate rate for each line item in analytics currency.

Metric	Metric Definition
Credit Amount in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the cash refund subject area. This specific attribute can be used to describe the amount credited for each line item in analytics currency.
Debit Amount in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the cash refund subject area. This specific attribute can be used to describe the amount debited for each line item in analytics currency.
Line Estimated Gross Profit in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the cash refund subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for each line item in analytics currency.
Line Amount in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the cash refund subject area. This specific attribute can be used to describe the amount for each line item in analytics currency.
Item Rate in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the cash refund subject area. This specific attribute can be used to describe the item rate for each line item in analytics currency.
Accounting Book Credit Amount	This is a metric that is available to be used to describe a transaction line under the cash refund subject area. This specific attribute can be used to describe the accounting book credit amount for each line item in accounting book currency amounts.
Accounting Book Debit Amount	This is a metric that is available to be used to describe a transaction line under the cash refund subject area. This specific attribute can be used to describe the accounting book debit amount for each line item in accounting book currency amounts.

NetSuite — Cash Sale

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics Currency and exchange rate type are configured during product implementation. Exchange rate date basis is the cash sales date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Cash Sales	This is a derived metric that can be used to describe a transaction under the cash sale subject area. This specific attribute is derived by the count of the total number of cash sales.

Metric	Metric Definition
Estimated Gross Profit Percent	This is a metric that can be used to describe a transaction under the cash sale subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the estimated gross profit percent.
Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction under the cash sales subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transaction currency.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the cash sales subject area. This specific attribute can be used to describe the total amount in transaction currency.
Total Cost Estimate in Transaction Currency	This is a metric that can be used to describe a transaction under the cash sales subject area. This specific attribute can be used to describe the total cost estimated in transaction currency.
Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction under the cash sales subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit percent in base currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the cash sales subject area. This specific attribute can be used to describe the total amount in base currency.
Total Cost Estimate in Base Currency	This is a metric that can be used to describe a transaction under the cash sales subject area. This specific attribute can be used to describe the total cost estimated in base currency.
Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction under the cash sales subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit in analytics currency.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the cash sales subject area. This specific attribute can be used to describe the total amount in analytics currency.
Total Cost Estimate in Analytics Currency	This is a metric that can be used to describe a transaction under the cash sales subject area. This specific attribute can be used to describe the total cost estimate in analytics currency.
Total Number of Cash Sale Lines	This is a derived metric that can be used to describe a transaction line under the cash sales subject area. This specific attribute is derived by the count of the total number of cash sales for each line item.

Metric	Metric Definition
Item Quantity	This is a metric that is available to be used to describe a transaction line under the cash sales subject area. This specific attribute can be used to describe the item quantity per transaction line
Line Estimated Gross Profit Percent	This is a metric that is available to be used to describe a transaction line under the cash sales subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the estimated gross profit percent for each line item.
Cost Estimate in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the cash sales subject area. This specific attribute can be used to describe the cost estimate for each line item in transaction currency.
Cost Estimate Rate in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the cash sales subject area. This specific attribute can be used to describe the cost estimate rate for each line item in transaction currency.
Credit Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the cash sales subject area. This specific attribute can be used to describe the amount credited for each line item in transaction currency.
Debit Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the cash sales subject area. This specific attribute can be used to describe the amount debited for each line item in transaction currency.
Line Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the cash sales subject area. This specific attribute can be used to describe the amount for each line item in transaction currency.
Net Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the cash sales subject area. This specific attribute can be used to describe the net amount for each line item in transaction currency.
Line Estimated Gross Profit in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the cash refund subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for each line item in transaction currency.
Item Rate in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the cash sales subject area. This specific attribute can be used to describe the item rate for each line item in transaction currency.
Accounting Line Credit Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the cash sales subject area. This specific attribute can be used to describe the accounting line credit amount for each line item in transaction currency.

ORACLE

Metric	Metric Definition
Accounting Line Debit Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the cash sales subject area. This specific attribute can be used to describe the accounting line debit amount for each line item in transaction currency.
Line Amount in Base Currency	This is a metric that is available to be used to describe a transaction line under the cash sales subject area. This specific attribute can be used to describe the amount for each line item in base currency.
Cost Estimate in Base Currency	This is a metric that is available to be used to describe a transaction line under the cash sales subject area. This specific attribute can be used to describe the cost estimate for each line item in base currency.
Cost Estimate Rate in Base Currency	This is a metric that is available to be used to describe a transaction line under the cash sales subject area. This specific attribute can be used to describe the cost estimate rate for each line item in base currency.
Credit Amount in Base Currency	This is a metric that is available to be used to describe a transaction line under the cash sales subject area. This specific attribute can be used to describe the amount credited for each line item in base currency.
Debit Amount in Base Currency	This is a metric that is available to be used to describe a transaction line under the cash sales subject area. This specific attribute can be used to describe the amount debited for each line item in base currency.
Line Estimated Gross Profit in Base Currency	This is a metric that is available to be used to describe a transaction line under the cash refund subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for each line item in base currency.
Net Amount in Base Currency	This is a metric that is available to be used to describe a transaction line under the cash sales subject area. This specific attribute can be used to describe the net amount for each line item in base currency.
Item Rate in Base Currency	This is a metric that is available to be used to describe a transaction line under the cash sales subject area. This specific attribute can be used to describe the item rate for each line item in base currency.
Cost Estimate in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the cash sales subject area. This specific attribute can be used to describe the cost estimate for each line item in analytics currency.
Cost Estimate Rate in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the cash sales subject area. This specific attribute can be used to describe the cost estimate rate for each line item in analytics currency.
Credit Amount in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the cash sales subject area. This specific attribute can be used to describe the amount credited for each line item in analytics currency.

Metric	Metric Definition
Debit Amount in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the cash sales subject area. This specific attribute can be used to describe the amount debited for each line item in analytics currency.
Line Amount in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the cash sales subject area. This specific attribute can be used to describe the amount for each line item in analytics currency.
Net Amount in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the cash sales subject area. This specific attribute can be used to describe the net amount for each line item in analytics currency.
Line Estimated Gross Profit in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the cash refund subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for each line item in analytics currency.
Item Rate in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the cash sales subject area. This specific attribute can be used to describe the item rate for each line item in analytics currency.
Accounting Book Credit Amount	This is a metric that is available to be used to describe a transaction line under the cash sales subject area. This specific attribute can be used to describe the accounting book credit amount for each line item in accounting book currency.
Accounting Book Debit Amount	This is a metric that is available to be used to describe a transaction line under the cash sales subject area. This specific attribute can be used to describe the accounting book debit amount for each line item in accounting book currency.

NetSuite — Charge

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. Exchange rate date basis is the work order date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Charges	This is a metric that can be used to describe a transaction under the NetSuite - Charge.This specific attribute can be used to describe the Total Number of Charges.
Total Charge Amount	This is a metric that can be used to describe a transaction under the NetSuite - Charge.This specific attribute can be used to describe the Total Charge Amount.

Metric	Metric Definition
Total Charge Quantity	This is a metric that can be used to describe a transaction under the NetSuite - Charge.This specific attribute can be used to describe the Total Charge Quantity.
Item Rate	This is a metric that can be used to describe a transaction under the NetSuite - Charge.This specific attribute can be used to describe the Item Rate.

NetSuite — Check

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. Exchange rate date basis are the work order date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Estimated Gross Profit in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Check subject area. This specific attribute is derived by count of Estimated Gross Profit in Transaction Currency at each line level.
Total Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Check subject area. This specific attribute is derived by Total Amount in Transaction Currency.
Estimated Gross Profit in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Check subject area. This specific attribute is derived by count of Estimated Gross Profit in Base Currency at each line level.
Total Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Check subject area. This specific attribute is derived by Total Amount in Base Currency.
Estimated Gross Profit in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Check subject area. This specific attribute is derived by count of Estimated Gross Profit in Analytics Currency at each line level.
Total Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Check subject area. This specific attribute is derived by Total Amount in Analytics Currency.
Line Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Check subject area. This specific attribute is derived by Line Amount in Transaction Currency.

Metric	Metric Definition
Accounting Line Credit Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Check subject area. This specific attribute is derived by Accounting Line Credit Amount in Transaction Currency.
Credit Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Check subject area. This specific attribute is derived by Credit Amount in Transaction Currency.
Accounting Line Debit Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Check subject area. This specific attribute is derived by Accounting Line Debit Amount in Transaction Currency.
Debit Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Check subject area. This specific attribute is derived by Debit Amount in Transaction Currency.
Line Estimated Gross Profit in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Check subject area. This specific attribute is derived by count of Line Estimated Gross Profit in Transaction Currency at each line level.
Item Net Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Check subject area. This specific attribute is derived by Item Net Amount in Transaction Currency.
Item Rate in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Check subject area. This specific attribute is derived by count of Item Rate in Transaction Currency at each line level.
Line Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Check subject area. This specific attribute is derived by count of the Line Amount in Base Currency.
Credit Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Check subject area. This specific attribute is derived by Credit Amount in Base Currency.
Debit Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Check subject area. This specific attribute is derived by Debit Amount in Base Currency.
Line Estimated Gross Profit in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Check subject area. This specific attribute is derived by count of Line Estimated Gross Profit in Base Currency at each line level.
Item Net Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Check subject area. This specific attribute is derived by Item Net Amount in Base Currency.
Item Rate in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Check subject area. This specific attribute is derived by count of Item Rate in Base Currency at each line level.

ORACLE

Metric	Metric Definition
Line Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Check subject area. This specific attribute is derived by count of the Line Amount in Analytics Currency.
Credit Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Check subject area. This specific attribute is derived by Credit Amount in Analytics Currency.
Debit Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Check subject area. This specific attribute is derived by Debit Amount in Analytics Currency.
Line Estimated Gross Profit in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Check subject area. This specific attribute is derived by count of Line Estimated Gross Profit in Analytics Currency at each line level.
Item Net Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Check subject area. This specific attribute is derived by Item Net Amount in Analytics Currency.
Item Rate in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Check subject area. This specific attribute is derived by count of Item Rate in Analytics Currency at each line level.
Accounting Book Credit Amount	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Check subject area. This specific attribute is derived by Accounting Book Credit Amount.
Accounting Book Debit Amount	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Check subject area. This specific attribute is derived by Accounting Book Debit Amount.

NetSuite — Commission

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. Exchange rate date basis are the work order date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Commission. This specific attribute can be used to describe the Total Amount in Transaction Currency.

Metric	Metric Definition
Paid Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Commission. This specific attribute can be used to describe the Paid Amount in Transaction Currency.
Unpaid Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Commission. This specific attribute can be used to describe the Unpaid Amount in Transaction Currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Commission. This specific attribute can be used to describe the Total Amount in Base Currency.
Paid Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Commission. This specific attribute can be used to describe the Paid Amount in Base Currency.
Unpaid Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Commission. This specific attribute can be used to describe the Unpaid Amount in Base Currency.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Commission. This specific attribute can be used to describe the Total Amount in Analytics Currency.
Paid Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Commission. This specific attribute can be used to describe the Paid Amount in Analytics Currency.
Unpaid Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Commission. This specific attribute can be used to describe the Unpaid Amount in Analytics Currency.
Item Net Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Commission. This specific attribute can be used to describe the Item Net Amount in Transaction Currency.
Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Commission. This specific attribute can be used to describe the Line Amount in Transaction Currency.
Linked Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Commission. This specific attribute can be used to describe the Linked Amount in Transaction Currency.
Line Amount Paid in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Commission. This specific attribute can be used to describe the Line Amount Paid in Transaction Currency.
Line Amount Unpaid in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Commission. This specific attribute can be used to describe the Line Amount Unpaid in Transaction Currency.

Item Net Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Credit Card Refund subject area. This specific attribute is derived by Item Net Amount in Transaction Currency.
Line Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Credit Card Refund subject area. This specific attribute is derived by count of the Line Amount in Transaction Currency.
Line Estimated Gross Profit in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Credit Card Refund subject area. This specific attribute is derived by count of Line Estimated Gross Profit in Transaction Currency at each line level.
Gross Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Credit Card Refund subject area. This specific attribute is derived by Gross Amount in Transaction Currency.
Tax Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Credit Card Refund subject area. This specific attribute is derived by Tax Amount in Transaction Currency.
Credit Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Credit Card Refund subject area. This specific attribute is derived by Credit Amount in Transaction Currency.
Debit Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Credit Card Refund subject area. This specific attribute is derived by Debit Amount in Transaction Currency.
Accounting Line Credit Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Credit Card Refund subject area. This specific attribute is derived by count of the Accounting Line Credit Amount in Transaction Currency.
Accounting Line Debit Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Credit Card Refund subject area. This specific attribute is derived by count of the Accounting Line Debit Amount in Transaction Currency.

ORACLE

Metric	Metric Definition
Item Rate in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Credit Card Refund subject area. This specific attribute is derived by count of Item Rate in Base Currency at each line level.
Item Net Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Credit Card Refund subject area. This specific attribute is derived by Item Net Amount in Base Currency.
Line Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Credit Card Refund subject area. This specific attribute is derived by count of the Line Amount in Base Currency.
Line Estimated Gross Profit in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Credit Card Refund subject area. This specific attribute is derived by count of Line Estimated Gross Profit in Base Currency at each line level.
Gross Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Credit Card Refund subject area. This specific attribute is derived by Gross Amount in Base Currency.
Tax Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Credit Card Refund subject area. This specific attribute is derived by Tax Amount in Base Currency.
Credit Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Credit Card Refund subject area. This specific attribute is derived by Credit Amount in Base Currency.
Debit Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Credit Card Refund subject area. This specific attribute is derived by Debit Amount in Base Currency.
Item Rate in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Credit Card Refund subject area. This specific attribute is derived by count of Item Rate in Analytics Currency at each line level.
Item Net Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Credit Card Refund subject area. This specific attribute is derived by Item Net Amount in Analytics Currency.
Line Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Credit Card Refund subject area. This specific attribute is derived by count of the Line Amount in Analytics Currency.
Line Estimated Gross Profit in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Credit Card Refund subject area. This specific attribute is derived by count of Line Estimated Gross Profit in Analytics Currency at each line level.

Metric	Metric Definition
Gross Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Credit Card Refund subject area. This specific attribute is derived by Gross Amount in Analytics Currency.
Tax Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Credit Card Refund subject area. This specific attribute is derived by Tax Amount in Analytics Currency.
Credit Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Credit Card Refund subject area. This specific attribute is derived by Credit Amount in Analytics Currency.
Debit Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Credit Card Refund subject area. This specific attribute is derived by Debit Amount in Analytics Currency.
Accounting Book Credit Amount	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Credit Card Refund subject area. This specific attribute is derived by Accounting Book Credit Amount.
Accounting Book Debit Amount	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Credit Card Refund subject area. This specific attribute is derived by Accounting Book Debit Amount.

NetSuite — Credit Memo

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date basis is the credit memo date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Credit Memos	This is a derived metric that can be used to describe a transaction under the credit memo subject area. This specific attribute is derived by the count of the total number of credit memos.
Estimated Gross Profit Percent	This is a metric that can be used to describe a transaction under the credit memo subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the estimated gross profit percent.

Metric	Metric Definition
Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction under the credit memo subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transaction currency.
Unused Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the credit memo subject area. This specific attribute can be used to describe the unused amount in transaction currency.
Used Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the credit memo subject area. This specific attribute can be used to describe the used amounts in transaction currency.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the credit memo subject area. This specific attribute can be used to describe the total amount in transaction currency.
Total Cost Estimate in Transaction Currency	This is a metric that can be used to describe a transaction under the credit memo subject area. This specific attribute can be used to describe the total cost estimate in transaction currency.
Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction under the credit memo subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit in base currency.
Unused Amount in Base Currency	This is a metric that can be used to describe a transaction under the credit memo subject area. This specific attribute can be used to describe the unused amount in base currency.
Used Amount in Base Currency	This is a metric that can be used to describe a transaction under the credit memo subject area. This specific attribute can be used to describe the used amount in base currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the credit memo subject area. This specific attribute can be used to describe the total amount in base currency.
Total Cost Estimate in Base Currency	This is a metric that can be used to describe a transaction under the credit memo subject area. This specific attribute can be used to describe the total cost estimate in base currency.
Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction under the credit memo subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit in analytics currency.
Unused Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the credit memo subject area. This specific attribute can be used to describe the unused amount in analytics currency.

Metric	Metric Definition
Used Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the credit memo subject area. This specific attribute can be used to describe the used amount in analytics currency.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the credit memo subject area. This specific attribute can be used to describe the total amount in analytics currency.
Total Cost Estimate in Analytics Currency	This is a metric that can be used to describe a transaction under the credit memo subject area. This specific attribute can be used to describe the total cost estimate in analytics currency.
Total Number of Credit Memo Lines	This is a derived metric that is available to be used to describe a transaction line under the credit memo subject area. This specific attribute is derived by the count of the total number of credit memos.
Item Quantity	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. This specific attribute can be used to describe the item quantity per transaction line
Line Estimated Gross Profit Percent	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the estimated gross profit percent per transaction line
Cost Estimate in Transaction Currency	This is a metric that can be used to describe a transaction line under the credit memo subject area. This specific attribute can be used to describe the cost estimated in transaction currency for each line item in transaction currency.
Cost Estimate Rate in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. This specific attribute can be used to describe the cost estimate rate for each line item in transaction currency.
Credit Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. This specific attribute can be used to describe the amount credited for each line item in transaction currency.
Debit Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. This specific attribute can be used to describe the amount debited for each line item in transaction currency.
Line Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. This specific attribute can be used to describe the amount for each line item in transaction currency.

Metric	Metric Definition
Unused Line Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. This specific attribute can be used to describe the unused amount for each line item in transaction currency.
Used Line Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. This specific attribute can be used to describe the used amount for each line item in transaction currency.
Net Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. This specific attribute can be used to describe the net amount for each line item in transaction currency.
Line Estimated Gross Profit in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for each line item in transaction currency.
Item Rate in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. This specific attribute can be used to describe the rate of item for each line item in transaction currency.
Linked Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. Linked amount is the amount that relates to a corresponding and related transaction. This specific attribute can be used to describe the linked amount for each line item in transaction currency.
Accounting Line Credit Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. This specific attribute can be used to describe the accounting line credit amount for each line item in transaction currency.
Accounting Line Debit Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. This specific attribute can be used to describe the accounting line debit amount for each line item in transaction currency.
Line Amount in Base Currency	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. This specific attribute can be used to describe the amount for each line item in base currency.
Cost Estimate in Base Currency	This is a metric that can be used to describe a transaction line under the credit memo subject area. This specific attribute can be used to describe the cost estimated in base currency for each line item in transaction currency.
Cost Estimate Rate in Base Currency	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. This specific attribute can be used to describe the cost estimate rate for each line item in base currency.

Metric	Metric Definition
Credit Amount in Base Currency	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. This specific attribute can be used to describe the amount credited for each line item in base currency.
Debit Amount in Base Currency	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. This specific attribute can be used to describe the amount debited for each line item in base currency.
Net Amount in Base Currency	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. This specific attribute can be used to describe the net amount for each line item in base currency.
Unused Line Amount in Base Currency	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. This specific attribute can be used to describe the unused amount for each line item in base currency.
Used Line Amount in Base Currency	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. This specific attribute can be used to describe the used amount for each line item in base currency.
Item Rate in Base Currency	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. This specific attribute can be used to describe the rate of item for each line item in base currency.
Line Estimated Gross Profit in Base Currency	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for each line item in base currency.
Linked Amount in Base Currency	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. Linked amount is the amount that relates to a corresponding and related transaction. This specific attribute can be used to describe the linked amount for each line item in base currency.
Cost Estimate in Analytics Currency	This is a metric that can be used to describe a transaction line under the credit memo subject area. This specific attribute can be used to describe the cost estimated in analytics currency for each line item in transaction currency.
Cost Estimate Rate in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. This specific attribute can be used to describe the cost estimate rate for each line item in analytics currency.
Credit Amount in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. This specific attribute can be used to describe the amount credited for each line item in analytics currency.
Debit Amount in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. This specific attribute can be used to describe the amount debited for each line item in base currency.

Metric	Metric Definition
Line Amount in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. This specific attribute can be used to describe the amount for each line item in analytics currency.
Unused Line Amount in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. This specific attribute can be used to describe the unused amount for each line item in analytics currency.
Used Line Amount in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. This specific attribute can be used to describe the used amount for each line item in analytics currency.
Net Amount in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. This specific attribute can be used to describe the net amount for each line item in analytics currency.
Line Estimated Gross Profit in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for each line item in analytics currency.
Item Rate in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. This specific attribute can be used to describe the rate of item for each line item in analytics currency.
Linked Amount in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. Linked amount is the amount that relates to a corresponding and related transaction. This specific attribute can be used to describe the linked amount for each line item in analytics currency.
Accounting Book Credit Amount	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. This specific attribute can be used to describe the accounting book credit amount for each line item in accounting book currency.
Accounting Book Debit Amount	This is a metric that is available to be used to describe a transaction line under the credit memo subject area. This specific attribute can be used to describe the accounting book debit amount for each line item in accounting book currency.

NetSuite — Cross Charge Journal

These metrics will be used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type will be configured during product implementation.

Exchange rate date basis will be work order date to convert to analytics currency. Metrics in these folders will show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Number of Days in Period	This is a metric that can be used to describe a transaction under NetSuite - Cross Charge Journal.This specific attribute can be used to describe the Number of Days in Period.
Total Number of Cross Charge Journals	This is a metric that can be used to describe a transaction under NetSuite - Cross Charge Journal.This specific attribute can be used to describe the Total Number of Cross Charge Journals.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under NetSuite - Cross Charge Journal.This specific attribute can be used to describe the Total Amount in Transaction Currency.
Paid Amount in Transaction Currency	This is a metric that can be used to describe a transaction under NetSuite - Cross Charge Journal.This specific attribute can be used to describe the Paid Amount in Transaction Currency.
Unpaid Amount in Transaction Currency	This is a metric that can be used to describe a transaction under NetSuite - Cross Charge Journal.This specific attribute can be used to describe the Unpaid Amount in Transaction Currency.
Recognized Revenue in Transaction Currency	This is a metric that can be used to describe a transaction under NetSuite - Cross Charge Journal.This specific attribute can be used to describe the Recognized Revenue in Transaction Currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under NetSuite - Cross Charge Journal.This specific attribute can be used to describe the Total Amount in Base Currency.
Paid Amount in Base Currency	This is a metric that can be used to describe a transaction under NetSuite - Cross Charge Journal.This specific attribute can be used to describe the Paid Amount in Base Currency.
Unpaid Amount in Base Currency	This is a metric that can be used to describe a transaction under NetSuite - Cross Charge Journal.This specific attribute can be used to describe the Unpaid Amount in Base Currency.
Recognized Revenue in Base Currency	This is a metric that can be used to describe a transaction under NetSuite - Cross Charge Journal.This specific attribute can be used to describe the Recognized Revenue in Base Currency.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under NetSuite - Cross Charge Journal.This specific attribute can be used to describe the Total Amount in Analytics Currency.
Paid Amount in Analytics Currency	This is a metric that can be used to describe a transaction under NetSuite - Cross Charge Journal.This specific attribute can be used to describe the Paid Amount in Analytics Currency.

Line Amount Paid in Analytics Currency	This is a metric that can be used to describe a transaction under NetSuite - Cross Charge Journal.This specific attribute can be used to describe the Line Amount Paid in Analytics Currency.
Line Amount Unpaid in Analytics Currency	This is a metric that can be used to describe a transaction under NetSuite - Cross Charge Journal.This specific attribute can be used to describe the Line Amount Unpaid in Analytics Currency.
Credit Amount in Analytics Currency	This is a metric that can be used to describe a transaction under NetSuite - Cross Charge Journal.This specific attribute can be used to describe the Credit Amount in Analytics Currency.
Debit Amount in Analytics Currency	This is a metric that can be used to describe a transaction under NetSuite - Cross Charge Journal.This specific attribute can be used to describe the Debit Amount in Analytics Currency.

Metric	Metric Definition
Accounting Book Credit Amount	This is a metric that can be used to describe a transaction under NetSuite - Cross Charge Journal.This specific attribute can be used to describe the Accounting Book Credit Amount.
Accounting Book Debit Amount	This is a metric that can be used to describe a transaction under NetSuite - Cross Charge Journal.This specific attribute can be used to describe the Accounting Book Debit Amount.

NetSuite — Currency Revaluation

These metrics will be used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type will be configured during product implementation. Exchange rate date basis will be currency revaluation date to convert to analytics currency. Metrics in these folders will show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Currency Revaluations	This is a derived metric that can be used to describe a transaction under the currency revaluation subject area. This specific attribute is derived by the count of the total number of currency revaluations.
Total Number of Currency Revaluation Lines	This is a derived metric that can be used to describe a transaction line under the currency revaluation subject area. This specific attribute is derived by the count of the total number of currency revaluations for every line transaction.
Linked Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the currency revaluation subject area. Linked amount is the amount that relates to a corresponding and related transaction. This specific attribute can be used to describe the linked amount in transaction currency for every line transaction.
Linked Amount in Base Currency	This is a metric that can be used to describe a transaction line under the currency revaluation subject area. Linked amount is the amount that relates to a corresponding and related transaction. This specific attribute can be used to describe the linked amount in base currency for every line transaction.
Linked Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the currency revaluation subject area. Linked amount is the amount that relates to a corresponding and related transaction. This specific attribute can be used to describe the linked amount in analytics currency for every line transaction.
Accounting Book Credit Amount	This is a metric that can be used to describe a transaction line under the currency revaluation subject area. This specific attribute can be used to describe the accounting book credit amount in accounting book currency for every line transaction.

Metric	Metric Definition
Accounting Book Debit Amount	This is a metric that can be used to describe a transaction line under the currency revaluation subject area. This specific attribute can be used to describe the accounting book debit amount in accounting book currency for every line transaction.

NetSuite — Customer Deposit

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date basis is the Invoice date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies. Currently only accounted payments are supported.

Metrics

Metric	Metric Definition
Total Number of Customer Deposits	This is a derived metric that can be used to describe a transaction under the customer deposit subject area. This specific attribute is derived by the count of the total number of customer deposits.
Unused Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the customer deposit subject area. This specific attribute can be used to describe the unused amount in transaction currency.
Used Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the customer deposit subject area. This specific attribute can be used to describe the used amount in transaction currency.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the customer deposit subject area. This specific attribute can be used to describe the total amount in transaction currency.
Unused Amount in Base Currency	This is a metric that can be used to describe a transaction under the customer deposit subject area. This specific attribute can be used to describe the unused amounts in base currency.
Used Amount in Base Currency	This is a metric that can be used to describe a transaction under the customer deposit subject area. This specific attribute can be used to describe the used amount in base currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the customer deposit subject area. This specific attribute can be used to describe the total amount in base currency.
Unused Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the customer deposit subject area. This specific attribute can be used to describe the unused amounts in analytics currency.

Metric	Metric Definition
Used Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the customer deposit subject area. This specific attribute can be used to describe the used amount in analytics currency.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the customer deposit subject area. This specific attribute can be used to describe the total amount in analytics currency.
Total Number of Customer Deposit Lines	This is a derived metric that is available to be used to describe a transaction line under the customer deposit subject area. This specific attribute is derived by the count of the total number of customer deposits per line item.
Credit Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the customer deposit subject area. This specific attribute can be used to describe the amount credited per line item in transaction currency.
Debit Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the customer deposit subject area. This specific attribute can be used to describe the amount debited per line item in transaction currency.
Line Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the customer deposit subject area. This specific attribute can be used to describe the line amount in transaction currency.
Net Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the customer deposit subject area. This specific attribute can be used to describe the net amount in transaction currency.
Accounting Line Credit Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the customer deposit subject area. This specific attribute can be used to describe the accounting line credit amount in transaction currency.
Accounting Line Debit Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the customer deposit subject area. This specific attribute can be used to describe the accounting line debit amount in transaction currency.
Line Amount in Base Currency	This is a metric that is available to be used to describe a transaction line under the customer deposit subject area. This specific attribute can be used to describe the line amount in base currency.
Credit Amount in Base Currency	This is a metric that is available to be used to describe a transaction line under the customer deposit subject area. This specific attribute can be used to describe the amount credited per line item in base currency.
Debit Amount in Base Currency	This is a metric that is available to be used to describe a transaction line under the customer deposit subject area. This specific attribute can be used to describe the amount debited per line item in base currency.
Net Amount in Base Currency	This is a metric that is available to be used to describe a transaction line under the customer deposit subject area. This specific attribute can be used to describe the net amount in base currency.

Metric	Metric Definition
Credit Amount in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the customer deposit subject area. This specific attribute can be used to describe the amount credited per line item in analytics currency.
Debit Amount in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the customer deposit subject area. This specific attribute can be used to describe the amount debited per line item in analytics currency.
Line Amount in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the customer deposit subject area. This specific attribute can be used to describe the line amount in analytics currency.
Net Amount in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the customer deposit subject area. This specific attribute can be used to describe the net amount in analytics currency.
Accounting Book Credit Amount	This is a metric that is available to be used to describe a transaction line under the customer deposit subject area. This specific attribute can be used to describe the accounting book credit amount in accounting book currency.
Accounting Book Debit Amount	This is a metric that is available to be used to describe a transaction line under the customer deposit subject area. This specific attribute can be used to describe the accounting book debit amount in accounting book currency.

NetSuite — Customer Invoice

These metrics will be used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder and Transaction Currency (TC) fact folder in Subject Areas. Analytics Currency and exchange rate type will be configured during product implementation. Exchange rate date basis will be Invoice date to convert to analytics currency. Metrics in these folders will show amounts in their respective currencies. Currently there's only support for accounted payments.

Metrics

Metric	Metric Definition
Total Number of Customer Invoices	This is a derived metric that can be used to describe a transaction under the customer invoices subject area. This specific attribute is derived by the count of the total number of customer invoices.
Total Number of Closed Invoices	This is a derived metric that can be used to describe a transaction under the customer invoices subject area. This specific attribute is derived by the count of the total number of invoices that are in closed status.
Total Number of Payment Days	This is a derived metric that can be used to describe a transaction under the customer invoices subject area. This specific attribute is derived by the count of the total number of payment days in a invoice transaction.

Metric	Metric Definition
Average Number of Payment Days	This is a derived metric that can be used to describe a transaction under the customer invoices subject area. This specific attribute is derived by the count of the average number of payment days in a invoice transaction.
Total Number of Invoices Paid After Due Date	This is a derived metric that can be used to describe a transaction under the customer invoices subject area. This specific attribute is derived by the count of the total number of invoices paid after the due date of the transaction.
Total Number of Invoices Paid By Due Date	This is a derived metric that can be used to describe a transaction under the customer invoices subject area. This specific attribute is derived by the count of the total number of invoices paid by the due date of the transaction.
Total Number of Overdue Invoices	This is a derived metric that can be used to describe a transaction under the customer invoices subject area. This specific attribute is derived by the count of the total number of overdue invoices.
Total Number of Open Invoices	This is a derived metric that can be used to describe a transaction under the customer invoices subject area. This specific attribute is derived by the count of the total number of invoices that are in open status.
Total Number of Days Until Due Date	This is a derived metric that can be used to describe a transaction under the customer invoices subject area. This specific attribute is derived by the count of the total number of days until due date.
Total Number of Days Overdue	This is a derived metric that can be used to describe a transaction under the customer invoices subject area. This specific attribute is derived by the count of the total number of days overdue.
Estimated Gross Profit Percent	This is a metric that can be used to describe a transaction under the customer invoice subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the estimated gross profit percent for a transaction.
Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction under the customer invoice subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit in transaction currency.
Paid Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the customer invoice subject area. This specific attribute can be used to describe the paid amount in transaction currency.
Unpaid Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the customer invoice subject area. This specific attribute can be used to describe the unpaid amount in transaction currency.

Metric	Metric Definition
Customer Invoice Total in Transaction Currency	This is a metric that can be used to describe a transaction under the customer invoice subject area. This specific attribute can be used to describe the total customer invoice amount in transaction currency.
Total Cost Estimate in Transaction Currency	This is a metric that can be used to describe a transaction under the customer invoice subject area. This specific attribute can be used to describe the total cost estimate in transaction currency.
Closed Invoice Amount in Transaction Currency	This is a derived metric that can be used to describe a transaction under the customer invoice subject area. This specific attribute is derived by the sum of the amount for invoices in closed state in transaction currency.
Remaining Amount Overdue in Transaction Currency	This is a derived metric that can be used to describe a transaction under the customer invoice subject area. This specific attribute is derived by the sum of the overdue amount remaining for invoices in transaction currency.
Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction under the customer invoice subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit in base currency.
Paid Amount in Base Currency	This is a metric that can be used to describe a transaction under the customer invoice subject area. This specific attribute can be used to describe the paid amount in base currency.
Unpaid Amount in Base Currency	This is a metric that can be used to describe a transaction under the customer invoice subject area. This specific attribute can be used to describe the unpaid amount in base currency.
Customer Invoice Total in Base Currency	This is a metric that can be used to describe a transaction under the customer invoice subject area. This specific attribute can be used to describe the total customer invoice amount in base currency.
Total Cost Estimate in Base Currency	This is a metric that can be used to describe a transaction under the customer invoice subject area. This specific attribute can be used to describe the total cost estimate in base currency.
Closed Invoice Amount in Base Currency	This is a derived metric that can be used to describe a transaction under the customer invoice subject area. This specific attribute is derived by the sum of the amount for invoices in closed state in base currency.
Remaining Amount Overdue in Base Currency	This is a derived metric that can be used to describe a transaction under the customer invoice subject area. This specific attribute is derived by the sum of the overdue amount remaining for invoices in base currency.
Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction under the customer invoice subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit in analytics currency.

Metric	Metric Definition
Paid Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the customer invoice subject area. This specific attribute can be used to describe the paid amount in analytics currency.
Unpaid Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the customer invoice subject area. This specific attribute can be used to describe the unpaid amount in analytics currency.
Customer Invoice Total in Analytics Currency	This is a metric that can be used to describe a transaction under the customer invoice subject area. This specific attribute can be used to describe the total customer invoice amount in analytics currency.
Total Cost Estimate in Analytics Currency	This is a metric that can be used to describe a transaction under the customer invoice subject area. This specific attribute can be used to describe the total cost estimate in analytics currency.
Closed Invoice Amount in Analytics Currency	This is a derived metric that can be used to describe a transaction under the customer invoice subject area. This specific attribute is derived by the sum of the amount for invoices in closed state in analytics currency.
Remaining Amount Overdue in Analytics Currency	This is a derived metric that can be used to describe a transaction under the customer invoice subject area. This specific attribute is derived by the sum of the overdue amount remaining for invoices in analytics currency.
Total Number of Customer Invoice Lines	This is a derived metric that is available to be used to describe a transaction line under the customer invoices subject area. This specific attribute is derived by the count of the total number of customer invoices per line item.
Item Quantity	This is a metric that is available to be used to describe a transaction line under the customer invoices subject area. This specific attribute can be used to describe the item quantity per line item.
Line Estimated Gross Profit Percent	This is a metric that is available to be used to describe a transaction line under the customer invoices subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the estimated gross profit percent per line item.
Cost Estimate in Transaction Currency	This is a metric that can be used to describe a transaction line under the customer invoice subject area. This specific attribute can be used to describe the cost estimated in transaction currency for each line item.
Cost Estimate Rate in Transaction Currency	This is a metric that can be used to describe a transaction line under the customer invoice subject area. This specific attribute can be used to describe the cost estimated rate in transaction currency for each line item.
Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the customer invoice subject area. This specific attribute can be used to describe the amount credited in transaction currency for each line item.

Metric	Metric Definition
Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the customer invoice subject area. This specific attribute can be used to describe the amount debited in transaction currency for each line item.
Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the customer invoice subject area. This specific attribute can be used to describe the amount in transaction currency for each line item.
Paid Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the customer invoice subject area. This specific attribute can be used to describe the paid amount in transaction currency for each line item.
Unpaid Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the customer invoice subject area. This specific attribute can be used to describe the unpaid amount in transaction currency for each line item.
Net Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the customer invoice subject area. This specific attribute can be used to describe the net amount in transaction currency for each line item.
Item Rate in Transaction Currency	This is a metric that can be used to describe a transaction line under the customer invoice subject area. This specific attribute can be used to describe the item rate in transaction currency for each line item.
Line Estimated Gross Profit in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the customer invoices subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit per line item in transaction currency.
Linked Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the customer invoices subject area. Linked amount is the amount that relates to a corresponding and related transaction. This specific attribute can be used to describe the linked amount per line item in transaction currency.
Accounting Line Credit Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the customer invoices subject area. This specific attribute can be used to describe the accounting line credit amount per line item in transaction currency.
Accounting Line Debit Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the customer invoices subject area. This specific attribute can be used to describe the accounting line debit amount per line item in transaction currency.
Cost Estimate in Base Currency	This is a metric that can be used to describe a transaction line under the customer invoice subject area. This specific attribute can be used to describe the cost estimated in base currency for each line item.

ORACLE

Metric	Metric Definition
Cost Estimate Rate in Base Currency	This is a metric that can be used to describe a transaction line under the customer invoice subject area. This specific attribute can be used to describe the cost estimate rate in base currency for each line item.
Credit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the customer invoice subject area. This specific attribute can be used to describe the amount credited in base currency for each line item.
Debit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the customer invoice subject area. This specific attribute can be used to describe the amount debited in base currency for each line item.
Line Amount in Base Currency	This is a metric that can be used to describe a transaction line under the customer invoice subject area. This specific attribute can be used to describe the amount in base currency for each line item.
Paid Line Amount in Base Currency	This is a metric that can be used to describe a transaction line under the customer invoice subject area. This specific attribute can be used to describe the paid amount in base currency for each line item.
Unpaid Line Amount in Base Currency	This is a metric that can be used to describe a transaction line under the customer invoice subject area. This specific attribute can be used to describe the unpaid amount in base currency for each line item.
Net Amount in Base Currency	This is a metric that can be used to describe a transaction line under the customer invoice subject area. This specific attribute can be used to describe the net amount in base currency for each line item.
Item Rate in Base Currency	This is a metric that can be used to describe a transaction line under the customer invoice subject area. This specific attribute can be used to describe the item rate in base currency for each line item.
Line Estimated Gross Profit in Base Currency	This is a metric that is available to be used to describe a transaction line under the customer invoices subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit per line item in base currency.
Linked Amount in Base Currency	This is a metric that is available to be used to describe a transaction line under the customer invoices subject area. Linked amount is the amount that relates to a corresponding and related transaction. This specific attribute can be used to describe the linked amount per line item in base currency.
Cost Estimate in Analytics Currency	This is a metric that can be used to describe a transaction line under the customer invoice subject area. This specific attribute can be used to describe the cost estimated in analytics currency for each line item.
Cost Estimate Rate in Analytics Currency	This is a metric that can be used to describe a transaction line under the customer invoice subject area. This specific attribute can be used to describe the cost estimate rate in analytics currency for each line item.

Metric	Metric Definition
Credit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the customer invoice subject area. This specific attribute can be used to describe the amount credited in analytics currency for each line item.
Debit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the customer invoice subject area. This specific attribute can be used to describe the amount debited in analytics currency for each line item.
Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the customer invoice subject area. This specific attribute can be used to describe the amount in analytics currency for each line item.
Paid Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the customer invoice subject area. This specific attribute can be used to describe the paid amount in analytics currency for each line item.
Unpaid Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the customer invoice subject area. This specific attribute can be used to describe the unpaid amount in analytics currency for each line item.

The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit per line item in analytics currency.
Linked Amount in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the customer invoices subject area. Linked amount is the amount that relates to a corresponding and related transaction. This specific attribute can be used to describe the linked amount per line item in analytics currency.
Accounting Book Credit Amount	This is a metric that is available to be used to describe a transaction line under the customer invoices subject area. This specific attribute can be used to describe the accounting book credit amount in accounting book currency.
Accounting Book Debit Amount	This is a metric that is available to be used to describe a transaction line under the customer invoices subject area. This specific attribute can be used to describe the accounting book debit amount in accounting book currency.

ORACLE®

NetSuite — Customer Invoice Snapshot

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date basis is the invoice accounting date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction under the customer invoice subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit in transaction currency.
Paid Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the customer invoice subject area. This specific attribute can be used to describe the paid amount in transaction currency.
Unpaid Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the customer invoice subject area. This specific attribute can be used to describe the unpaid amount in transaction currency.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the customer invoice subject area. This specific attribute can be used to describe the total customer invoice amount in transaction currency.
Total Cost Estimate in Transaction Currency	This is a metric that can be used to describe a transaction under the customer invoice subject area. This specific attribute can be used to describe the total cost estimate in transaction currency.
Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction under the customer invoice subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit in base currency.
Paid Amount in Base Currency	This is a metric that can be used to describe a transaction under the customer invoice subject area. This specific attribute can be used to describe the paid amount in base currency.
Unpaid Amount in Base Currency	This is a metric that can be used to describe a transaction under the customer invoice subject area. This specific attribute can be used to describe the unpaid amount in base currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the customer invoice subject area. This specific attribute can be used to describe the total customer invoice amount in base currency.
Total Cost Estimate in Base Currency	This is a metric that can be used to describe a transaction under the customer invoice subject area. This specific attribute can be used to describe the total cost estimate in base currency.

Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Customer Refund. This specific attribute can be used to describe the Credit Amount in Transaction Currency.
Accounting Line Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Customer Refund. This specific attribute can be used to describe the Accounting Line Debit Amount in Transaction Currency.

Metric	Metric Definition
Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Customer Refund. This specific attribute can be used to describe the Debit Amount in Transaction Currency.
Item Net Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Customer Refund. This specific attribute can be used to describe the Item Net Amount in Transaction Currency.
Linked Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Customer Refund. This specific attribute can be used to describe the Linked Amount in Transaction Currency.
Paid Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Customer Refund. This specific attribute can be used to describe the Paid Line Amount in Transaction Currency.
Unpaid Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Customer Refund. This specific attribute can be used to describe the Unpaid Line Amount in Transaction Currency.
Line Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Customer Refund. This specific attribute can be used to describe the Line Amount in Base Currency.
Credit Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Customer Refund. This specific attribute can be used to describe the Credit Amount in Base Currency.
Debit Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Customer Refund. This specific attribute can be used to describe the Debit Amount in Base Currency.
Item Net Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Customer Refund. This specific attribute can be used to describe the Item Net Amount in Base Currency.
Linked Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Customer Refund. This specific attribute can be used to describe the Linked Amount in Base Currency.
Paid Line Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Customer Refund. This specific attribute can be used to describe the Paid Line Amount in Base Currency.
Unpaid Line Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Customer Refund. This specific attribute can be used to describe the Unpaid Line Amount in Base Currency.
Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Customer Refund. This specific attribute can be used to describe the Line Amount in Analytics Currency.

Metric	Metric Definition
Credit Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Customer Refund. This specific attribute can be used to describe the Credit Amount in Analytics Currency.
Debit Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Customer Refund. This specific attribute can be used to describe the Debit Amount in Analytics Currency.
Item Net Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Customer Refund. This specific attribute can be used to describe the Item Net Amount in Analytics Currency.
Linked Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Customer Refund. This specific attribute can be used to describe the Linked Amount in Analytics Currency.
Paid Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Customer Refund. This specific attribute can be used to describe the Paid Line Amount in Analytics Currency.
Unpaid Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Customer Refund. This specific attribute can be used to describe the Unpaid Line Amount in Analytics Currency.
Accounting Book Credit Amount	This is a metric that can be used to describe a transaction under the NetSuite - Customer Refund. This specific attribute can be used to describe the Accounting Book Credit Amount.
Accounting Book Debit Amount	This is a metric that can be used to describe a transaction under the NetSuite - Customer Refund. This specific attribute can be used to describe the Accounting Book Debit Amount.

NetSuite — Deposit

These metrics will be used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type will be configured during product implementation. Exchange rate date basis will be work order date to convert to analytics currency. Metrics in these folders will show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Assembly Builds	This is a derived metric that is available to be used to describe a transaction under the Assembly Build subject area. This specific attribute is derived by count of the total number of assembly builds.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the Assembly Build subject area. This specific attribute can be used to describe the amount in total in transaction currency.

ORACLE

Metric	Metric Definition
Outsourcing Charge Unit Price in Transaction Currency	This is a metric that can be used to describe a transaction under the Assembly Build subject area. Outsourcing charge is the cost associated with an outsourced step in a work order.This specific attribute can be used to describe the outsourcing charge per unit price in transaction currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the assembly builds subject area. This specific attribute can be used to describe the total amount in base currency.
Outsourcing Charge Unit Price in Base Currency	This is a metric that can be used to describe a transaction under the Assembly Builds subject area. Outsourcing charge is the cost associated with an outsourced step in a work order. This specific attribute can be used to describe the total amount in analytics currency.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the assembly builds subject area. This specific attribute can be used to describe the total amount in analytics currency.
Outsourcing Charge Unit Price in Analytics Currency	This is a metric that can be used to describe a transaction under the assembly build subject area. Outsourcing charge is the cost associated with an outsourced step in a work order. This specific attribute can be used to describe the total amount in analytics currency.
Total Number of Assembly Build Lines	This is a derived metric that can be used to describe a transaction line under the assembly builds subject area. This specific attribute is derived by count of the total number of assembly builds for each line item.
Item Quantity	This is a metric that is available to be used to describe a transaction line under the assembly build subject area. This specific attribute can be used to describe the item quantity per transaction line
Item Rate in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the assembly build subject area. This specific attribute can be used to describe the item rate for each line item in transaction currency.
Item Net Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the assembly build subject area. This specific attribute can be used to describe the net amount for each line item in transaction currency.
Line Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the assembly build subject area. This specific attribute can be used to describe the amount for each line item in transaction currency.
Credit Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the assembly build subject area. This specific attribute can be used to describe the amount credited for each line item in transaction currency.

ORACLE®

Metric	Metric Definition
Debit Amount in Transaction Currency	This is a metric that is available to be used to describe a transaction line under the assembly build subject area. This specific attribute can be used to describe the amount debited for each line item in transaction currency.
Line Amount in Base Currency	This is a metric that is available to be used to describe a transaction line under the assembly build subject area. This specific attribute can be used to describe the line amount for each line item in base currency.
Item Net Amount in Base Currency	This is a metric that is available to be used to describe a transaction line under the assembly build subject area. This specific attribute can be used to describe the net amount for each line item in base currency.
Credit Amount in Base Currency	This is a metric that is available to be used to describe a transaction line under the assembly build subject area. This specific attribute can be used to describe the amount credited for each line item in base currency.
Debit Amount in Base Currency	This is a metric that is available to be used to describe a transaction line under the assembly build subject area. This specific attribute can be used to describe the amount debited for each line item in base currency.
Line Amount in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the assembly build subject area. This specific attribute can be used to describe the amount for each line item in analytics currency.
Item Net Amount in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the assembly build subject area. This specific attribute can be used to describe the net amount for each line item in analytics currency.
Credit Amount in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the assembly build subject area. This specific attribute can be used to describe the amount credited for each line item in analytics currency.
Debit Amount in Analytics Currency	This is a metric that is available to be used to describe a transaction line under the assembly build subject area. This specific attribute can be used to describe the amount debited for each line item in analytics currency.
Accounting Book Credit Amount	This is a metric that is available to be used to describe a transaction line under the assembly build subject area. This specific attribute can be used to describe the accounting book credit amount for each line item in accounting book currency amounts.
Accounting Book Debit Amount	This is a metric that is available to be used to describe a transaction line under the assembly build subject area. This specific attribute can be used to describe the accounting book debit amount for each line item in accounting book currency amounts.

Metric	Metric Definition
Total Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Deposit subject area. This specific attribute is derived by Total Amount in Transaction Currency

Metric	Metric Definition
Total Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Deposit subject area. This specific attribute is derived by Total Amount in Base Currency
Total Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Deposit subject area. This specific attribute is derived by Total Amount in Analytics Currency
Line Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Deposit subject area. This specific attribute is derived by count of the Line Amount in Transaction Currency
Accounting Line Credit Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Deposit subject area. This specific attribute is derived by count of the Accounting Line Credit Amount in Transaction Currency
Credit Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Deposit subject area. This specific attribute is derived by Credit Amount in Transaction Currency
Accounting Line Debit Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Deposit subject area. This specific attribute is derived by count of the Accounting Line Debit Amount in Transaction Currency
Debit Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Deposit subject area. This specific attribute is derived by Debit Amount in Transaction Currency
Item Net Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Deposit subject area. This specific attribute is derived by Item Net Amount in Transaction Currency
Line Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Deposit subject area. This specific attribute is derived by count of the Line Amount in Base Currency
Credit Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Deposit subject area. This specific attribute is derived by Credit Amount in Base Currency
Debit Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Deposit subject area. This specific attribute is derived by Debit Amount in Base Currency
Item Net Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Deposit subject area. This specific attribute is derived by Item Net Amount in Base Currency
Line Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Deposit subject area. This specific attribute is derived by count of the Line Amount in Analytics Currency

Metric	Metric Definition
Credit Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Deposit subject area. This specific attribute is derived by Credit Amount in Analytics Currency
Debit Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Deposit subject area. This specific attribute is derived by Debit Amount in Analytics Currency
Item Net Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Deposit subject area. This specific attribute is derived by Item Net Amount in Analytics Currency
Accounting Book Credit Amount	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Deposit subject area. This specific attribute is derived by Accounting Book Credit Amount
Accounting Book Debit Amount	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Deposit subject area. This specific attribute is derived by Accounting Book Debit Amount

NetSuite — Deposit Application

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date basis is the deposit application date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Deposit Applications	This is a derived metric that can be used to describe a transaction under the deposit application subject area. This specific attribute is derived by the count of the total number of deposit applications for transaction.
Unused Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the deposit application subject area. This specific attribute can be used to describe the unused amount in deposit applications for transactions in transaction currency.
Used Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the deposit application subject area. This specific attribute can be used to describe the used amount in deposit applications for transactions in transaction currency.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the deposit application subject area. This specific attribute can be used to describe the total amount in deposit applications for transactions in transaction currency.

ORACLE®

Metric	Metric Definition
Unused Amount in Base Currency	This is a metric that can be used to describe a transaction under the deposit application subject area. This specific attribute can be used to describe the unused amount in deposit applications for transactions in base currency.
Used Amount in Base Currency	This is a metric that can be used to describe a transaction under the deposit application subject area. This specific attribute can be used to describe the used amount in deposit applications for transactions in base currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the deposit application subject area. This specific attribute can be used to describe the total amount in deposit applications for transactions in base currency.
Unused Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the deposit application subject area. This specific attribute can be used to describe the unused amount in deposit applications for transactions in analytics currency.
Used Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the deposit application subject area. This specific attribute can be used to describe the used amount in deposit applications for transactions in analytics currency.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the deposit application subject area. This specific attribute can be used to describe the total amount in deposit applications for transactions in analytics currency.
Total Number of Deposit Application Lines	This is a derived metric that can be used to describe a transaction line under the deposit application subject area. This specific attribute is derived by the count of the total number of deposit applications for each transaction line.
Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the deposit application subject area. This specific attribute can be used to describe the amount credited for deposit applications for each transaction line in transaction currency.
Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the deposit application subject area. This specific attribute can be used to describe the amount debited for deposit applications for each transaction line in transaction currency.
Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the deposit application subject area. This specific attribute can be used to describe the line amount for deposit applications for each transaction line in transaction currency.
Unused Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the deposit application subject area. This specific attribute can be used to describe the unused line amount for deposit applications for each transaction line in transaction currency.

ORACLE®

Metric	Metric Definition
Used Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the deposit application subject area. This specific attribute can be used to describe the used line amount for deposit applications for each transaction line in transaction currency.
Net Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the deposit application subject area. This specific attribute can be used to describe the net amount for deposit applications for each transaction line in transaction currency.
Accounting Line Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the deposit application subject area. This specific attribute can be used to describe the accounting line credit amount for each transaction line in transaction currency.
Accounting Line Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the deposit application subject area. This specific attribute can be used to describe the accounting line debit amount for each transaction line in transaction currency.
Line Amount in Base Currency	This is a metric that can be used to describe a transaction line under the deposit application subject area. This specific attribute can be used to describe the line amount for deposit applications for each transaction line in base currency.
Credit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the deposit application subject area. This specific attribute can be used to describe the amount credited for deposit applications for each transaction line in base currency.
Debit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the deposit application subject area. This specific attribute can be used to describe the amount debited for deposit applications for each transaction line in base currency.
Net Amount in Base Currency	This is a metric that can be used to describe a transaction line under the deposit application subject area. This specific attribute can be used to describe the net amount for deposit applications for each transaction line in base currency.
Unused Line Amount in Base Currency	This is a metric that can be used to describe a transaction line under the deposit application subject area. This specific attribute can be used to describe the unused line amount for deposit applications for each transaction line in base currency.
Used Line Amount in Base Currency	This is a metric that can be used to describe a transaction line under the deposit application subject area. This specific attribute can be used to describe the used line amount for deposit applications for each transaction line in base currency.
Credit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the deposit application subject area. This specific attribute can be used to describe the amount credited for deposit applications for each transaction line in analytics currency.

ORACLE®

Metric	Metric Definition
Debit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the deposit application subject area. This specific attribute can be used to describe the amount debited for deposit applications for each transaction line in analytics currency.
Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the deposit application subject area. This specific attribute can be used to describe the line amount for deposit applications for each transaction line in analytics currency.
Unused Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the deposit application subject area. This specific attribute can be used to describe the unused line amount for deposit applications for each transaction line in analytics currency.
Used Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the deposit application subject area. This specific attribute can be used to describe the used line amount for deposit applications for each transaction line in analytics currency.
Net Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the deposit application subject area. This specific attribute can be used to describe the net amount for deposit applications for each transaction line in analytics currency.
Accounting Book Credit Amount	This is a metric that can be used to describe a transaction line under the deposit application subject area. This specific attribute can be used to describe the accounting book credit amount for each transaction line in accounting book currency.
Accounting Book Debit Amount	This is a metric that can be used to describe a transaction line under the deposit application subject area. This specific attribute can be used to describe the accounting book debit amount for each transaction line in accounting book currency.

NetSuite — Estimate

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date basis is the estimate creation date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies. .

Metrics

Metric	Metric Definition
Total Number of Estimates	This is a derived metric that can be used to describe a transaction under the estimate subject area. This specific attribute is derived by the count of the total number of estimates for transaction.

Metric	Metric Definition
Estimated Gross Profit Percent	This is a metric that can be used to describe a transaction under the estimate subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the estimated gross profit percent for transaction.
Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction under the estimate subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in transaction currency.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the estimate subject area. This specific attribute can be used to describe the total amount for transactions in transaction currency.
Total Cost Estimate in Transaction Currency	This is a metric that can be used to describe a transaction under the estimate subject area. This specific attribute can be used to describe the total cost estimate for transactions in transaction currency.
Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction under the estimate subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in base currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the estimate subject area. This specific attribute can be used to describe the total amount for transactions in base currency.
Total Cost Estimate in Base Currency	This is a metric that can be used to describe a transaction under the estimate subject area. This specific attribute can be used to describe the total cost estimate for transactions in base currency.
Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction under the estimate subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in analytics currency.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the estimate subject area. This specific attribute can be used to describe the total amount for transactions in analytics currency.
Total Cost Estimate in Analytics Currency	This is a metric that can be used to describe a transaction under the estimate subject area. This specific attribute can be used to describe the total cost estimate for transactions in analytics currency.
Total Number of Estimate Lines	This is a derived metric that can be used to describe a transaction line under the estimate subject area. This specific attribute is derived by the count of the total number of estimates for every transaction line.

ORACLE

Metric	Metric Definition
Item Quantity	This is a metric that can be used to describe a transaction line under the estimate subject area. This specific attribute can be used to describe the item quantity for every transaction line.
Line Estimated Gross Profit Percent	This is a metric that can be used to describe a transaction line under the estimate subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the estimated gross profit percent for every transaction line.
Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the estimate subject area. This specific attribute can be used to describe the line amount for every transaction line in transaction currency.
Cost Estimate in Transaction Currency	This is a metric that can be used to describe a transaction line under the estimate subject area. This specific attribute can be used to describe the cost estimate for every transaction line in transaction currency.
Cost Estimate Rate in Transaction Currency	This is a metric that can be used to describe a transaction line under the estimate subject area. This specific attribute can be used to describe the cost estimate rate for every transaction line in transaction currency.
Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the estimate subject area. This specific attribute can be used to describe the amount credited for every transaction line in transaction currency.
Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the estimate subject area. This specific attribute can be used to describe the amount debited for every transaction line in transaction currency.
Line Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction line under the estimate subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for every transaction line in transaction currency.
Item Net Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the estimate subject area. This specific attribute can be used to describe the item net amount for every transaction line in transaction currency.
Item Rate in Transaction Currency	This is a metric that can be used to describe a transaction line under the estimate subject area. This specific attribute can be used to describe the item rate for every transaction line in transaction currency.
Accounting Line Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the estimate subject area. This specific attribute can be used to describe the accounting line credit amount for every transaction line in transaction currency.

Metric	Metric Definition
Accounting Line Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the estimate subject area. This specific attribute can be used to describe the accounting line debit amount for every transaction line in transaction currency.
Line Amount in Base Currency	This is a metric that can be used to describe a transaction line under the estimate subject area. This specific attribute can be used to describe the line amount for every transaction line in base currency.
Cost Estimate in Base Currency	This is a metric that can be used to describe a transaction line under the estimate subject area. This specific attribute can be used to describe the cost estimate for every transaction line in base currency.
Cost Estimate Rate in Base Currency	This is a metric that can be used to describe a transaction line under the estimate subject area. This specific attribute can be used to describe the cost estimate rate for every transaction line in base currency.
Credit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the estimate subject area. This specific attribute can be used to describe the amount credited for every transaction line in base currency.
Debit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the estimate subject area. This specific attribute can be used to describe the amount debited for every transaction line in base currency.
Line Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction line under the estimate subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for every transaction line in base currency.
Item Net Amount in Base Currency	This is a metric that can be used to describe a transaction line under the estimate subject area. This specific attribute can be used to describe the item net amount for every transaction line in base currency.
Item Rate in Base Currency	This is a metric that can be used to describe a transaction line under the estimate subject area. This specific attribute can be used to describe the item rate for every transaction line in base currency.
Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the estimate subject area. This specific attribute can be used to describe the line amount for every transaction line in analytics currency.
Cost Estimate in Analytics Currency	This is a metric that can be used to describe a transaction line under the estimate subject area. This specific attribute can be used to describe the cost estimate for every transaction line in analytics currency.
Cost Estimate Rate in Analytics Currency	This is a metric that can be used to describe a transaction line under the estimate subject area. This specific attribute can be used to describe the cost estimate rate for every transaction line in analytics currency.

ORACLE®

Metric	Metric Definition
Credit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the estimate subject area. This specific attribute can be used to describe the amount credited for every transaction line in analytics currency.
Debit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the estimate subject area. This specific attribute can be used to describe the amount debited for every transaction line in analytics currency.
Line Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction line under the estimate subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for every transaction line in analytics currency.
Item Net Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the estimate subject area. This specific attribute can be used to describe the item net amount for every transaction line in analytics currency.
Item Rate in Analytics Currency	This is a metric that can be used to describe a transaction line under the estimate subject area. This specific attribute can be used to describe the item rate for every transaction line in analytics currency.
Accounting Book Credit Amount	This is a metric that can be used to describe a transaction line under the estimate subject area. This specific attribute can be used to describe the accounting book credit amount for every transaction line in accounting book currency.
Accounting Book Debit Amount	This is a metric that can be used to describe a transaction line under the estimate subject area. This specific attribute can be used to describe the accounting book debit amount for every transaction line in accounting book currency.

NetSuite — Expense Report

These metrics will be used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type will be configured during product implementation. Exchange rate date basis will be work order date to convert to analytics currency. Metrics in these folders will show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by Total Amount in Transaction Currency.
Paid Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by Paid Amount in Transaction Currency.

Metric	Metric Definition
Unpaid Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by Unpaid Amount in Transaction Currency.
Tax Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by Tax Amount in Transaction Currency.
Total Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by Total Amount in Base Currency.
Paid Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by Paid Amount in Base Currency
Unpaid Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by Unpaid Amount in Base Currency.
Tax Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by Tax Amount in Base Currency.
Total Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by Total Amount in Analytics Currency.
Paid Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by Paid Amount in Analytics Currency.
Unpaid Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by Unpaid Amount in Analytics Currency.
Tax Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by Tax Amount in Analytics Currency.
Net Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by Net Amount in Transaction Currency.
Line Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by count of the Line Amount in Transaction Currency.
Accounting Line Credit Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by count of the Accounting Line Credit Amount in Transaction Currency.

Metric	Metric Definition
Accounting Line Debit Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by count of the Accounting Line Debit Amount in Transaction Currency.
Credit Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by Credit Amount in Transaction Currency.
Debit Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by Debit Amount in Transaction Currency.
Gross Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by Gross Amount in Transaction Currency.
Linked Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by Linked Amount in Transaction Currency.
Paid Line Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by count of the Paid Line Amount in Transaction Currency.
Unpaid Line Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by count of the Unpaid Line Amount in Transaction Currency.
Tax Line Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by count of the Tax Line Amount in Transaction Currency.
Net Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by Net Amount in Base Currency.
Line Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by count of the Line Amount in Base Currency.
Credit Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by Credit Amount in Base Currency.
Debit Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by Debit Amount in Base Currency.
Gross Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by Gross Amount in Base Currency.

Metric	Metric Definition
Linked Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by Linked Amount in Base Currency.
Paid Line Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by count of the Paid Line Amount in Base Currency.
Unpaid Line Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by count of the Unpaid Line Amount in Base Currency.
Tax Line Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by count of the Tax Line Amount in Base Currency.
Net Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by Net Amount in Analytics Currency.
Line Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by count of the Line Amount in Analytics Currency.
Credit Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by Credit Amount in Analytics Currency.
Debit Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by Debit Amount in Analytics Currency.
Gross Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by Gross Amount in Analytics Currency.
Linked Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by Linked Amount in Analytics Currency.
Paid Line Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by count of the Paid Line Amount in Analytics Currency.
Unpaid Line Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by count of the Unpaid Line Amount in Analytics Currency.
Tax Line Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by count of the Tax Line Amount in Analytics Currency.

Metric	Metric Definition
Accounting Book Credit Amount	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by Accounting Book Credit Amount.
Accounting Book Debit Amount	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report subject area. This specific attribute is derived by Accounting Book Debit Amount.

NetSuite — Expense Report Snapshot

These metrics will be used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type will be configured during product implementation. Exchange rate date basis will be work order date to convert to analytics currency. Metrics in these folders will show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Expense Report Snapshots	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report Snapshot subject area. This specific attribute is derived by count of Total Number of Expense Report Snapshots at each line level.
Total Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report Snapshot subject area. This specific attribute is derived by Total Amount in Transaction Currency.
Total Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report Snapshot subject area. This specific attribute is derived by Total Amount in Base Currency.
Total Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Expense Report Snapshot subject area. This specific attribute is derived by Total Amount in Analytics Currency.

NetSuite — Fulfillment Request

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The

exchange rate date basis is the work order date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Fulfillment Requests	This is a metric that can be used to describe a transaction under the NetSuite - Fulfillment Request. This specific attribute can be used to describe the Total Number of Fulfillment Requests.

NetSuite — GL Impact Adjustment

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date basis is the GL impact adjustment date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of GL Impact Adjustments	This is a derived metric that can be used to describe a transaction under the GL Adjustment subject area. This specific attribute is derived by the count of the total number of GL Impact Adjustments for transaction.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the GL Adjustment subject area. This specific attribute can be used to describe the total amount of transactions in transaction currency.
Deferred Revenue in Transaction Currency	This is a metric that can be used to describe a transaction under the GL Adjustment subject area. Deferred revenue is the revenue associated with a contractual obligation that has not yet been delivered or fulfilled. This specific attribute can be used to describe the deferred revenue of transactions in transaction currency.
Recognized Revenue in Transaction Currency	This is a metric that can be used to describe a transaction under the GL Adjustment subject area. Recognized Revenue is the amount of revenue recognized after fulfilling contractual obligations. This specific attribute can be used to describe the recognized revenue of transactions in transaction currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the GL Adjustment subject area. This specific attribute can be used to describe the total amount of transactions in base currency.
Deferred Revenue in Base Currency	This is a metric that can be used to describe a transaction under the GL Adjustment subject area. Deferred revenue is the revenue associated with a contractual obligation that has not yet been delivered or fulfilled. This specific attribute can be used to describe the deferred revenue of transactions in base currency.

Metric	Metric Definition
Recognized Revenue in Base Currency	This is a metric that can be used to describe a transaction under the GL Adjustment subject area. Recognized Revenue is the amount of revenue recognized after fulfilling contractual obligations. This specific attribute can be used to describe the recognized revenue of transactions in base currency.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the GL Adjustment subject area. This specific attribute can be used to describe the total amount of transactions in analytics currency.
Deferred Revenue in Analytics Currency	This is a metric that can be used to describe a transaction under the GL Adjustment subject area. Deferred revenue is the revenue associated with a contractual obligation that has not yet been delivered or fulfilled. This specific attribute can be used to describe the deferred revenue of transactions in analytics currency.
Recognized Revenue in Analytics Currency	This is a metric that can be used to describe a transaction under the GL Adjustment subject area. Recognized Revenue is the amount of revenue recognized after fulfilling contractual obligations. This specific attribute can be used to describe the recognized revenue of transactions in analytics currency.
Total Number of GL Impact Adjustment Lines	This is a derived metric that can be used to describe a transaction line under the GL Adjustment subject area. This specific attribute is derived by the count of the total number of GL Impact Adjustments for transaction.
Net Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the GL Adjustment subject area. This specific attribute can be used to describe the net amount per transaction line in transaction currency.
Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the GL Adjustment subject area. This specific attribute can be used to describe the line amount per transaction line in transaction currency.
Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the GL Adjustment subject area. This specific attribute can be used to describe the credit amount per transaction line in transaction currency.
Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the GL Adjustment subject area. This specific attribute can be used to describe the debit amount per transaction line in transaction currency.
Net Amount in Base Currency	This is a metric that can be used to describe a transaction line under the GL Adjustment subject area. This specific attribute can be used to describe the net amount per transaction line in base currency.
Line Amount in Base Currency	This is a metric that can be used to describe a transaction line under the GL Adjustment subject area. This specific attribute can be used to describe the line amount per transaction line in base currency.
Credit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the GL Adjustment subject area. This specific attribute can be used to describe the credit amount per transaction line in base currency.

Metric	Metric Definition
Debit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the GL Adjustment subject area. This specific attribute can be used to describe the debit amount per transaction line in base currency.
Net Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the GL Adjustment subject area. This specific attribute can be used to describe the net amount per transaction line in analytics currency.
Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the GL Adjustment subject area. This specific attribute can be used to describe the line amount per transaction line in analytics currency.
Credit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the GL Adjustment subject area. This specific attribute can be used to describe the credit amount per transaction line in analytics currency.
Debit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the GL Adjustment subject area. This specific attribute can be used to describe the debit amount per transaction line in analytics currency.
Accounting Book Credit Amount	This is a metric that can be used to describe a transaction line under the GL Adjustment subject area. This specific attribute can be used to describe the accounting book credit amount per transaction line in accounting book currency.
Accounting Book Debit Amount	This is a metric that can be used to describe a transaction line under the GL Adjustment subject area. This specific attribute can be used to describe the accounting book debit amount per transaction line in accounting book currency.

NetSuite — Inbound Shipment

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date basis is the work order date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Shipment Item Amount	This is a metric that can be used to describe a transaction under the NetSuite - Inbound Shipment. This specific attribute can be used to describe the Shipment Item Amount.
Shipment Rate	This is a metric that can be used to describe a transaction under the NetSuite - Inbound Shipment. This specific attribute can be used to describe the Shipment Rate.

Metric	Metric Definition
Shipment Expected Rate	This is a metric that can be used to describe a transaction under the NetSuite - Inbound Shipment. This specific attribute can be used to describe the Shipment Expected Rate.
Shipment Total Unit Cost	This is a metric that can be used to describe a transaction under the NetSuite - Inbound Shipment. This specific attribute can be used to describe the Shipment Total Unit Cost.
Shipment Unit Landed Cost	This is a metric that can be used to describe a transaction under the NetSuite - Inbound Shipment. This specific attribute can be used to describe the Shipment Unit Landed Cost.
Purchase Order Item Amount	This is a metric that can be used to describe a transaction under the NetSuite - Inbound Shipment. This specific attribute can be used to describe the Purchase Order Item Amount.
Purchase Order Rate	This is a metric that can be used to describe a transaction under the NetSuite - Inbound Shipment. This specific attribute can be used to describe the Purchase Order Rate.
Purchase Order Expected Rate	This is a metric that can be used to describe a transaction under the NetSuite - Inbound Shipment. This specific attribute can be used to describe the Purchase Order Expected Rate.
Purchase Order Total Unit Cost	This is a metric that can be used to describe a transaction under the NetSuite - Inbound Shipment. This specific attribute can be used to describe the Purchase Order Total Unit Cost.
Purchase Order Unit Landed Cost	This is a metric that can be used to describe a transaction under the NetSuite - Inbound Shipment. This specific attribute can be used to describe the Purchase Order Unit Landed Cost.

NetSuite — Inventory Adjustment

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date basis is the inventory adjustment date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Inventory Adjustments	This is a derived metric that can be used to describe a transaction under the Inventory Adjustment subject area. This specific attribute is derived by the count of the total number of Inventory Adjustments for transaction.

Metric	Metric Definition
Estimated Gross Profit Percent	This is a metric that can be used to describe a transaction under the Inventory Adjustment subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the estimated gross profit percent for transaction.
Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction under the Inventory Adjustment subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in transaction currency.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the Inventory Adjustment subject area. This specific attribute can be used to describe the total amount of transactions in transaction currency.
Average Amount in Transaction Currency	This is a derived metric that can be used to describe a transaction under the Inventory Adjustment subject area. This specific attribute is derived by the sum of the average amount of transactions in transaction currency.
Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction under the Inventory Adjustment subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in base currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the Inventory Adjustment subject area. This specific attribute can be used to describe the total amount of transactions in base currency.
Average Amount in Base Currency	This is a derived metric that can be used to describe a transaction under the Inventory Adjustment subject area. This specific attribute is derived by the sum of the average amount of transactions in base currency.
Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction under the Inventory Adjustment subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in analytics currency.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the Inventory Adjustment subject area. This specific attribute can be used to describe the total amount of transactions in analytics currency.
Average Amount in Analytics Currency	This is a derived metric that can be used to describe a transaction under the Inventory Adjustment subject area. This specific attribute is derived by the sum of the average amount of transactions in analytics currency.
Total Number of Inventory Adjustment Lines	This is a derived metric that can be used to describe a transaction line under the Inventory Adjustment subject area. This specific attribute is derived by the count of the total number of Inventory Adjustments line for every transaction line.

ORACLE®

Metric	Metric Definition
Item Quantity	This is a metric that can be used to describe a transaction line under the Inventory Adjustment subject area. This specific attribute can be used to describe the item quantity for every transaction line.
Line Estimated Gross Profit Percent	This is a metric that can be used to describe a transaction line under the Inventory Adjustment subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the estimated gross profit percent for every transaction line.
Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Inventory Adjustment subject area. This specific attribute can be used to describe the amount credited for every transaction line in transaction currency.
Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Inventory Adjustment subject area. This specific attribute can be used to describe the amount debited for every transaction line in transaction currency.
Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Inventory Adjustment subject area. This specific attribute can be used to describe the line amount for every transaction line in transaction currency.
Item Net Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Inventory Adjustment subject area. This specific attribute can be used to describe the item net amount for every transaction line in transaction currency.
Line Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction line under the Inventory Adjustment subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every transaction line in transaction currency.
Item Rate in Transaction Currency	This is a metric that can be used to describe a transaction line under the Inventory Adjustment subject area. This specific attribute can be used to describe the item rate for every transaction line in transaction currency.
Accounting Line Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Inventory Adjustment subject area. This specific attribute can be used to describe the accounting line credit amount for every transaction line in transaction currency.
Accounting Line Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Inventory Adjustment subject area. This specific attribute can be used to describe the accounting line debit amount for every transaction line in transaction currency.

ORACLE®

Metric	Metric Definition
Credit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Inventory Adjustment subject area. This specific attribute can be used to describe the amount credited for every transaction line in base currency.
Debit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Inventory Adjustment subject area. This specific attribute can be used to describe the amount debited for every transaction line in base currency.
Line Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Inventory Adjustment subject area. This specific attribute can be used to describe the line amount for every transaction line in base currency.
Item Net Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Inventory Adjustment subject area. This specific attribute can be used to describe the item net amount for every transaction line in base currency.
Line Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction line under the Inventory Adjustment subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every transaction line in base currency.
Item Rate in Base Currency	This is a metric that can be used to describe a transaction line under the Inventory Adjustment subject area. This specific attribute can be used to describe the item rate for every transaction line in base currency.
Credit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Inventory Adjustment subject area. This specific attribute can be used to describe the amount credited for every transaction line in analytics currency.
Debit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Inventory Adjustment subject area. This specific attribute can be used to describe the amount debited for every transaction line in analytics currency.
Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Inventory Adjustment subject area. This specific attribute can be used to describe the line amount for every transaction line in analytics currency.
Item Net Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Inventory Adjustment subject area. This specific attribute can be used to describe the item net amount for every transaction line in analytics currency.

ORACLE

Metric	Metric Definition
Line Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction line under the Inventory Adjustment subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every transaction line in analytics currency.
Item Rate in Analytics Currency	This is a metric that can be used to describe a transaction line under the Inventory Adjustment subject area. This specific attribute can be used to describe the item rate for every transaction line in analytics currency.
Accounting Book Credit Amount	This is a metric that can be used to describe a transaction line under the Inventory Adjustment subject area. This specific attribute can be used to describe the accounting book credit amount for every transaction line in accounting book currency.
Accounting Book Debit Amount	This is a metric that can be used to describe a transaction line under the Inventory Adjustment subject area. This specific attribute can be used to describe the accounting book debit amount for every transaction line in accounting book currency.

NetSuite — Inventory Cost Revaluation

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date basis is the work order date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Inventory Cost Revaluations	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Total Number of Inventory Cost Revaluations.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Total Amount in Transaction Currency.
Adjustment Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Adjustment Amount in Transaction Currency.
Inventory Value in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Inventory Value in Transaction Currency.

Metric	Metric Definition
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Total Amount in Base Currency.
Adjustment Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Adjustment Amount in Base Currency.
Inventory Value in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Inventory Value in Base Currency.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Total Amount in Analytics Currency.
Adjustment Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Adjustment Amount in Analytics Currency.
Inventory Value in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Inventory Value in Analytics Currency.
Total Number of Inventory Cost Revaluation Lines	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Total Number of Inventory Cost Revaluation Lines.
Item Quantity	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Item Quantity.
Cost Component Quantity	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Cost Component Quantity.
Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Line Amount in Transaction Currency.
Item Net Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Item Net Amount in Transaction Currency.
Cost Component Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Cost Component Amount in Transaction Currency.

ORACLE

Metric	Metric Definition
Cost Component Standard Cost in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Cost Component Standard Cost in Transaction Currency.
Accounting Line Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Accounting Line Credit Amount in Transaction Currency.
Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Credit Amount in Transaction Currency.
Accounting Line Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Accounting Line Debit Amount in Transaction Currency.
Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Debit Amount in Transaction Currency.
Line Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Line Amount in Base Currency.
Item Net Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Item Net Amount in Base Currency.
Cost Component Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Cost Component Amount in Base Currency.
Cost Component Standard Cost in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Cost Component Standard Cost in Base Currency.
Credit Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Credit Amount in Base Currency.
Debit Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Debit Amount in Base Currency.
Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Line Amount in Analytics Currency.

ORACLE®

Metric	Metric Definition
Item Net Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Item Net Amount in Analytics Currency.
Cost Component Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Cost Component Amount in Analytics Currency.
Cost Component Standard Cost in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Cost Component Standard Cost in Analytics Currency.

Debit Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Debit Amount in Analytics Currency.
Accounting Book Credit Amount	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Accounting Book Credit Amount.
Accounting Book Debit Amount	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Accounting Book Debit Amount.
Accounting Book Cost Component Amount	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Accounting Book Cost Component Amount.
Accounting Book Cost Component Standard Cost	This is a metric that can be used to describe a transaction under the NetSuite - Inventory Cost Revaluation.This specific attribute can be used to describe the Accounting Book Cost Component Standard Cost.

NetSuite — Inventory Count

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date

basis is the inventory count date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Inventory Counts	This is a derived metric that can be used to describe a transaction under the Inventory Count subject area. This specific attribute is derived by the count of the total number of Inventory counts for transactions.
Total Number of Inventory Count Lines	This is a derived metric that can be used to describe a transaction line under the Inventory Count subject area. This specific attribute is derived by the count of the total number of Inventory counts for every transaction line.
Item Quantity	This is a metric that can be used to describe a transaction line under the Inventory Count subject area. This specific attribute can be used to describe the item quantity for every transaction line.
Snapshot Quantity	This is a derived metric that can be used to describe a transaction line under the Inventory Count subject area. This specific attribute is derived by the sum of the snapshot quantity for every transaction line.
Count Quantity	This is a derived metric that can be used to describe a transaction line under the Inventory Count subject area. This specific attribute is derived by the count of the count quantity for every transaction line.
Adjusted Quantity	This is a derived metric that can be used to describe a transaction line under the Inventory Count subject area. This specific attribute is derived by the sum of the adjusted quantity for every transaction line.
Item Rate in Transaction Currency	This is a metric that can be used to describe a transaction line under the Inventory Count subject area. This specific attribute can be used to describe the item rate for every transaction line in transaction currency.
Item Rate in Base Currency	This is a metric that can be used to describe a transaction line under the Inventory Count subject area. This specific attribute can be used to describe the item rate for every transaction line in base currency.
Item Rate in Analytics Currency	This is a metric that can be used to describe a transaction line under the Inventory Count subject area. This specific attribute can be used to describe the item rate for every transaction line in analytics currency.

NetSuite — Inventory Item Location Quantity

These metrics will be used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder and Transaction Currency (TC) fact folder in Subject Areas. Analytics

currency and exchange rate type will be configured during product implementation. Exchange rate date basis will be work order date to convert to analytics currency.

Metrics

Metric	Metric Definition
Available Quantity	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Item Location Quantity subject area. This specific attribute is derived by count of the Available Quantity.
On Hand Quantity	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Item Location Quantity subject area. This specific attribute is derived by count of the On Hand Quantity.
Backordered Quantity	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Item Location Quantity subject area. This specific attribute is derived by count of the Backordered Quantity.
Committed Quantity	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Item Location Quantity subject area. This specific attribute is derived by count of the Committed Quantity.
Quantity In Transit	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Item Location Quantity subject area. This specific attribute is derived by count of the Quantity In Transit.
Quantity On Order	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Item Location Quantity subject area. This specific attribute is derived by count of the Quantity On Order.

NetSuite — Inventory Snapshot

These metrics will be used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type will be configured during product implementation. Exchange rate date basis will be work order date to convert to analytics currency.

Metrics

Metric	Metric Definition
On Hand Quantity	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Snapshot subject area. This specific attribute is derived by count of the On Hand Quantity.
Number of Days	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Snapshot subject area. This specific attribute is derived by count of Number of Days at each line level.

NetSuite — Inventory Status Change

These metrics will be used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and

exchange rate type will be configured during product implementation. Exchange rate date basis will be work order date to convert to analytics currency. Metrics in these folders will show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Inventory Status Changes	This is a metric that can be used to describe a transaction under NetSuite - Inventory Status Change.This specific attribute can be used to describe the Total Number of Inventory Status Changes.
Total Number of Inventory Status Change Inventory Assignments	This is a metric that can be used to describe a transaction under NetSuite - Inventory Status Change.This specific attribute can be used to describe the Total Number of Inventory Status Change Inventory Assignments.
Item Quantity	This is a metric that can be used to describe a transaction under NetSuite - Inventory Status Change.This specific attribute can be used to describe the Item Quantity.

NetSuite — Inventory Transfer

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date basis is the inventory transfer date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metric	Metric Definition
Total Number of Inventory Transfers	This is a derived metric that can be used to describe a transaction under the Inventory Transfer subject area. This specific attribute is derived by the count of the total number of Inventory transfers for transactions.
Total Number of Inventory Transfer Lines	This is a derived metric that can be used to describe a transaction line under the Inventory Transfer subject area. This specific attribute is derived by the count of the total number of Inventory transfers line for every transaction line.
Line Estimated Gross Profit Percent	This is a metric that can be used to describe a transaction line under the Inventory Transfer subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the estimated gross profit percent for every transaction line.
Item Quantity	This is a metric that can be used to describe a transaction line under the Inventory Transfer subject area. This specific attribute can be used to describe the item quantity for every transaction line.

Metric	Metric Definition
Line Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction line under the Inventory Transfer subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every transaction line in transaction currency.
Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Inventory Transfer subject area. This specific attribute can be used to describe the line amount for every transaction line in transaction currency.
Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Inventory Transfer subject area. This specific attribute can be used to describe the amount credited for every transaction line in transaction currency.
Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Inventory Transfer subject area. This specific attribute can be used to describe the amount debited for every transaction line in transaction currency.
Item Net Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Inventory Transfer subject area. This specific attribute can be used to describe the item net amount for every transaction line in transaction currency.
Item Rate in Transaction Currency	This is a metric that can be used to describe a transaction line under the Inventory Transfer subject area. This specific attribute can be used to describe the item rate for every transaction line in transaction currency.
Accounting Line Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Inventory Transfer subject area. This specific attribute can be used to describe the accounting line credit amount for every transaction line in transaction currency.
Accounting Line Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Inventory Transfer subject area. This specific attribute can be used to describe the accounting line debit amount for every transaction line in transaction currency.
Line Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction line under the Inventory Transfer subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every transaction line in base currency.
Line Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Inventory Transfer subject area. This specific attribute can be used to describe the line amount for every transaction line in base currency.

ORACLE®

Metric	Metric Definition
Credit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Inventory Transfer subject area. This specific attribute can be used to describe the amount credited for every transaction line in base currency.
Debit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Inventory Transfer subject area. This specific attribute can be used to describe the amount debited for every transaction line in base currency.
Item Net Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Inventory Transfer subject area. This specific attribute can be used to describe the item net amount for every transaction line in base currency.
Item Rate in Base Currency	This is a metric that can be used to describe a transaction line under the Inventory Transfer subject area. This specific attribute can be used to describe the item rate for every transaction line in base currency.
Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Inventory Transfer subject area. This specific attribute can be used to describe the line amount for every transaction line in analytics currency.
Credit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Inventory Transfer subject area. This specific attribute can be used to describe the amount credited for every transaction line in analytics currency.
Debit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Inventory Transfer subject area. This specific attribute can be used to describe the amount debited for every transaction line in analytics currency.
Line Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction line under the Inventory Transfer subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every transaction line in analytics currency.
Item Net Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Inventory Transfer subject area. This specific attribute can be used to describe the item net amount for every transaction line in analytics currency.
Item Rate in Analytics Currency	This is a metric that can be used to describe a transaction line under the Inventory Transfer subject area. This specific attribute can be used to describe the item rate for every transaction line in analytics currency.
Accounting Book Credit Amount	This is a metric that can be used to describe a transaction line under the Inventory Transfer subject area. This specific attribute can be used to describe the accounting book credit amount for every transaction line in accounting book currency.

Metric	Metric Definition
Accounting Book Debit Amount	This is a metric that can be used to describe a transaction line under the Inventory Transfer subject area. This specific attribute can be used to describe the accounting book debit amount for every transaction line in accounting book currency.

NetSuite — Inventory Worksheet

These metrics will be used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type will be configured during product implementation. Exchange rate date basis will be work order date to convert to analytics currency. Metrics in these folders will show amounts in their respective currencies.

Metric	Metric Definition
Estimated Gross Profit in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Worksheet subject area. This specific attribute is derived by count of Estimated Gross Profit in Transaction Currency at each line level.
Total Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Worksheet subject area. This specific attribute is derived by Total Amount in Transaction Currency.
Average Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Worksheet subject area. This specific attribute is derived by Average Amount in Transaction Currency.
Estimated Gross Profit in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Worksheet subject area. This specific attribute is derived by count of Estimated Gross Profit in Base Currency at each line level.
Total Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Worksheet subject area. This specific attribute is derived by Total Amount in Base Currency.
Average Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Worksheet subject area. This specific attribute is derived by Average Amount in Base Currency.
Estimated Gross Profit in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Worksheet subject area. This specific attribute is derived by count of Estimated Gross Profit in Analytics Currency at each line level.
Total Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Worksheet subject area. This specific attribute is derived by Total Amount in Analytics Currency.

ORACLE®

Metric	Metric Definition
Average Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Worksheet subject area. This specific attribute is derived by Average Amount in Analytics Currency.
Credit Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Worksheet subject area. This specific attribute is derived by Credit Amount in Transaction Currency.
Debit Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Worksheet subject area. This specific attribute is derived by Debit Amount in Transaction Currency.
Line Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Worksheet subject area. This specific attribute is derived by count of the Line Amount in Transaction Currency.
Item Net Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Worksheet subject area. This specific attribute is derived by Item Net Amount in Transaction Currency.
Line Estimated Gross Profit in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Worksheet subject area. This specific attribute is derived by count of Line Estimated Gross Profit in Transaction Currency at each line level.
Item Rate in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Worksheet subject area. This specific attribute is derived by count of Item Rate in Transaction Currency at each line level.
Accounting Line Credit Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Worksheet subject area. This specific attribute is derived by count of the Accounting Line Credit Amount in Transaction Currency.
Accounting Line Debit Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Worksheet subject area. This specific attribute is derived by count of the Accounting Line Debit Amount in Transaction Currency.
Credit Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Worksheet subject area. This specific attribute is derived by Credit Amount in Base Currency.
Debit Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Worksheet subject area. This specific attribute is derived by Debit Amount in Base Currency.
Line Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Worksheet subject area. This specific attribute is derived by count of the Line Amount in Base Currency.

Metric	Metric Definition
Item Net Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Worksheet subject area. This specific attribute is derived by Item Net Amount in Base Currency.
Line Estimated Gross Profit in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Worksheet subject area. This specific attribute is derived by count of Line Estimated Gross Profit in Base Currency at each line level.
Item Rate in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Worksheet subject area. This specific attribute is derived by count of Item Rate in Base Currency at each line level.
Credit Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Worksheet subject area. This specific attribute is derived by Credit Amount in Analytics Currency.
Debit Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Worksheet subject area. This specific attribute is derived by Debit Amount in Analytics Currency.
Line Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Worksheet subject area. This specific attribute is derived by count of the Line Amount in Analytics Currency.
Item Net Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Worksheet subject area. This specific attribute is derived by Item Net Amount in Analytics Currency.
Line Estimated Gross Profit in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Worksheet subject area. This specific attribute is derived by count of Line Estimated Gross Profit in Analytics Currency at each line level.
Item Rate in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Worksheet subject area. This specific attribute is derived by count of Item Rate in Analytics Currency at each line level.
Accounting Book Credit Amount	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Worksheet subject area. This specific attribute is derived by Accounting Book Credit Amount.
Accounting Book Debit Amount	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Inventory Worksheet subject area. This specific attribute is derived by Accounting Book Debit Amount.

NetSuite — Item Fulfillment

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date

basis is the item fullfillment date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Item Fulfillments	This is a derived metric that can be used to describe a transaction under the Item Fulfillment subject area. This specific attribute is derived by the count of the total number of Item Fulfillments for transactions.
Shipping Cost in Transaction Currency	This is a metric that can be used to describe a transaction under the Item Fulfillment subject area. This specific attribute can be used to describe the shipping cost for transactions in transaction currency.
Shipping Cost in Base Currency	This is a metric that can be used to describe a transaction under the Item Fulfillment subject area. This specific attribute can be used to describe the shipping cost for transactions in base currency.
Shipping Cost in Analytics Currency	This is a metric that can be used to describe a transaction under the Item Fulfillment subject area. This specific attribute can be used to describe the shipping cost for transactions in analytics currency.
Total Number of Item Fulfillment Lines	This is a derived metric that can be used to describe a transaction line under the Item Fulfillment subject area. This specific attribute is derived by the count of the total number of Item Fulfillments line for every transaction line.
Item Quantity	This is a metric that can be used to describe a transaction line under the Item Fulfillment subject area. This specific attribute can be used to describe the item quantity for every transaction line.
Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Item Fulfillment subject area. This specific attribute can be used to describe the amount credited for every transaction line in transaction currency.
Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Item Fulfillment subject area. This specific attribute can be used to describe the amount debited for every transaction line in transaction currency.
Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Item Fulfillment subject area. This specific attribute can be used to describe the line amount for every transaction line in transaction currency.
Net Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Item Fulfillment subject area. This specific attribute can be used to describe the net amount for every transaction line in transaction currency.
Item Rate in Transaction Currency	This is a metric that can be used to describe a transaction line under the Item Fulfillment subject area. This specific attribute can be used to describe the item rate for every transaction line in transaction currency.

Metric	Metric Definition
Accounting Line Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Item Fulfillment subject area. This specific attribute can be used to describe the accounting line credit amount for every transaction line in transaction currency.
Accounting Line Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Item Fulfillment subject area. This specific attribute can be used to describe the accounting line debit amount for every transaction line in transaction currency.
Credit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Item Fulfillment subject area. This specific attribute can be used to describe the amount credited for every transaction line in base currency.
Debit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Item Fulfillment subject area. This specific attribute can be used to describe the amount debited for every transaction line in base currency.
Line Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Item Fulfillment subject area. This specific attribute can be used to describe the line amount for every transaction line in base currency.
Net Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Item Fulfillment subject area. This specific attribute can be used to describe the net amount for every transaction line in base currency.
Item Rate in Base Currency	This is a metric that can be used to describe a transaction line under the Item Fulfillment subject area. This specific attribute can be used to describe the item rate for every transaction line in base currency.
Credit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Item Fulfillment subject area. This specific attribute can be used to describe the amount credited for every transaction line in analytics currency.
Debit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Item Fulfillment subject area. This specific attribute can be used to describe the amount debited for every transaction line in analytics currency.
Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Item Fulfillment subject area. This specific attribute can be used to describe the line amount for every transaction line in analytics currency.
Net Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Item Fulfillment subject area. This specific attribute can be used to describe the net amount for every transaction line in analytics currency.
Item Rate in Analytics Currency	This is a metric that can be used to describe a transaction line under the Item Fulfillment subject area. This specific attribute can be used to describe the item rate for every transaction line in analytics currency.

ORACLE

Metric	Metric Definition
Accounting Book Credit Amount	This is a metric that can be used to describe a transaction line under the Item Fulfillment subject area. This specific attribute can be used to describe the accounting book credit amount for every transaction line in accounting book currency.
Accounting Book Debit Amount	This is a metric that can be used to describe a transaction line under the Item Fulfillment subject area. This specific attribute can be used to describe the accounting book debit amount for every transaction line in accounting book currency.

NetSuite — Item Fulfillment Snapshot

These metrics will be used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type will be configured during product implementation. Exchange rate date basis will be work order date to convert to analytics currency. Metrics in these folders will show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Item Fulfillment Snapshots	This is a metric that can be used to describe a transaction under NetSuite - Item Fulfillment Snapshot.This specific attribute can be used to describe the Total Number of Item Fulfillment Snapshots.
Shipping Cost in Transaction Currency	This is a metric that can be used to describe a transaction under NetSuite - Item Fulfillment Snapshot.This specific attribute can be used to describe the Shipping Cost in Transaction Currency.
Shipping Cost in Base Currency	This is a metric that can be used to describe a transaction under NetSuite - Item Fulfillment Snapshot.This specific attribute can be used to describe the Shipping Cost in Base Currency.
Shipping Cost in Analytics Currency	This is a metric that can be used to describe a transaction under NetSuite - Item Fulfillment Snapshot.This specific attribute can be used to describe the Shipping Cost in Analytics Currency.

NetSuite — Item Receipt

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The

exchange rate date basis is the item receipt date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Item Receipts	This is a derived metric that can be used to describe a transaction under the Item receipt subject area. This specific attribute is derived by the count of the total number of Item receipts for transactions.
Estimated Gross Profit Percent	This is a metric that can be used to describe a transaction under the Item receipt subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the estimated gross profit percent for transactions.
Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction under the Item receipt subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in transaction currency.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the Item receipt subject area. This specific attribute can be used to describe the total amount for transactions in transaction currency.
Estimated Gross Profit In Base Currency	This is a metric that can be used to describe a transaction under the Item receipt subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in base currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the Item receipt subject area. This specific attribute can be used to describe the total amount for transactions in base currency.
Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction under the Item receipt subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in analytics currency.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the Item receipt subject area. This specific attribute can be used to describe the total amount for transactions in analytics currency.
Total Number of Item Receipt Lines	This is a derived metric that can be used to describe a transaction line under the Item receipt subject area. This specific attribute is derived by the count of the total number of Item receipt line for every transaction line.
Item Quantity	This is a metric that can be used to describe a transaction line under the Item receipt subject area. This specific attribute can be used to describe the item quantity for every transaction line.

This specific attribute can be used to describe the estimated gross profit for every transaction line.
Line Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction line under the Item receipt subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross for every transaction line in transaction currency.
Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Item receipt subject area. This specific attribute can be used to describe the line amount for every transaction line in transaction currency.
Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Item receipt subject area. This specific attribute can be used to describe the amount credited for every transaction line in transaction currency.
Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Item receipt subject area. This specific attribute can be used to describe the amount debited for every transaction line in transaction currency.
Net Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Item receipt subject area. This specific attribute can be used to describe the net amount for every transaction line in transaction currency.
Item Rate in Transaction Currency	This is a metric that can be used to describe a transaction line under the Item receipt subject area. This specific attribute can be used to describe the item rate for every transaction line in transaction currency.
Accounting Line Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Item receipt subject area. This specific attribute can be used to describe the accounting line credit amount for every transaction line in transaction currency.
Accounting Line Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Item receipt subject area. This specific attribute can be used to describe the accounting line debit amount for every transaction line in transaction currency.
Line Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction line under the Item receipt subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross for every transaction line in base currency.
Line Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Item receipt subject area. This specific attribute can be used to describe the line amount for every transaction line in base currency.

Metric	Metric Definition
Credit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Item receipt subject area. This specific attribute can be used to describe the amount credited for every transaction line in base currency.
Debit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Item receipt subject area. This specific attribute can be used to describe the amount debited for every transaction line in base currency.
Net Amount In Base Currency	This is a metric that can be used to describe a transaction line under the Item receipt subject area. This specific attribute can be used to describe the net amount for every transaction line in base currency.
Item Rate In Base Currency	This is a metric that can be used to describe a transaction line under the Item receipt subject area. This specific attribute can be used to describe the item rate for every transaction line in base currency.
Line Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction line under the Item receipt subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross for every transaction line in analytics currency.
Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Item receipt subject area. This specific attribute can be used to describe the line amount for every transaction line in analytics currency.
Credit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Item receipt subject area. This specific attribute can be used to describe the amount credited for every transaction line in analytics currency.
Debit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Item receipt subject area. This specific attribute can be used to describe the amount debited for every transaction line in analytics currency.
Net Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Item receipt subject area. This specific attribute can be used to describe the net amount for every transaction line in analytics currency.
Item Rate in Analytics Currency	This is a metric that can be used to describe a transaction line under the Item receipt subject area. This specific attribute can be used to describe the item rate for every transaction line in analytics currency.
Accounting Book Credit Amount	This is a metric that can be used to describe a transaction line under the Item receipt subject area. This specific attribute can be used to describe the accounting book credit amount for every transaction line in accounting book currency.
Accounting Book Debit Amount	This is a metric that can be used to describe a transaction line under the Item receipt subject area. This specific attribute can be used to describe the accounting book debit amount for every transaction line in accounting book currency.

NetSuite — Journal

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date basis is the Journal accounting date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Journals	This is a derived metric that can be used to describe a transaction under the Journal subject area. This specific attribute is derived by the count of the total number of journals for transactions.
Total Number of Journal Lines	This is a derived metric that can be used to describe a transaction line under the Journal subject area. This specific attribute is derived by the count of the total number of journals for every transaction line.
Net Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Journal subject area. This specific attribute can be used to describe the net amount for every transaction line in transaction currency.
Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Journal subject area. This specific attribute can be used to describe the line amount for every transaction line in transaction currency.
Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Journal subject area. This specific attribute can be used to describe the amount credited for every transaction line in transaction currency.
Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Journal subject area. This specific attribute can be used to describe the amount debited for every transaction line in transaction currency.
Paid Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Journal subject area. This specific attribute can be used to describe the paid line amount for every transaction line in transaction currency.
Unpaid Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Journal subject area. This specific attribute can be used to describe the unpaid line amount for every transaction line in transaction currency.
Unused Foreign Payment Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Journal subject area. This specific attribute can be used to describe the unused foreign payment amount for every transaction line in transaction currency.
Used Foreign Payment Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Journal subject area. This specific attribute can be used to describe the used foreign payment amount for every transaction line in transaction currency.

Metric	Metric Definition
Net Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Journal subject area. This specific attribute can be used to describe the net amount for every transaction line in base currency.
Line Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Journal subject area. This specific attribute can be used to describe the line amount for every transaction line in base currency.
Credit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Journal subject area. This specific attribute can be used to describe the amount credited for every transaction line in base currency.
Debit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Journal subject area. This specific attribute can be used to describe the amount debited for every transaction line in base currency.
Net Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Journal subject area. This specific attribute can be used to describe the net amount for every transaction line in analytics currency.
Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Journal subject area. This specific attribute can be used to describe the line amount for every transaction line in analytics currency.
Credit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Journal subject area. This specific attribute can be used to describe the amount credited for every transaction line in analytics currency.
Debit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Journal subject area. This specific attribute can be used to describe the amount debited for every transaction line in analytics currency.
Accounting Book Credit Amount	This is a metric that can be used to describe a transaction line under the Journal subject area. This specific attribute can be used to describe the accounting book credit amount for every transaction line in accounting book currency.
Accounting Book Debit Amount	This is a metric that can be used to describe a transaction line under the Journal subject area. This specific attribute can be used to describe the accounting book debit amount for every transaction line in accounting book currency.

NetSuite — Opportunity

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date

basis is the opportunity creation date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Opportunities	This is a derived metric that can be used to describe a transaction under the Opportunity subject area. This specific attribute is derived by the count of the total number of opportunities for transactions.
Estimated Gross Profit Percent	This is a metric that can be used to describe a transaction under the Opportunity subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the estimated gross profit percent for transactions.
Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction under the Opportunity subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in transaction currency.
Estimated Budget in Transaction Currency	This is a metric that can be used to describe a transaction under the Opportunity subject area. The estimated budget is the prospect the customer has for this opportunity. This specific attribute can be used to describe the estimated budget for transactions in transaction currency.
Projected Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the Opportunity subject area. Projected total amount is the amount stemming from an Opportunity Record and recorded by a Sales Rep. This amount represents the forecasted amount of the Sales Opportunity. This specific attribute can be used to describe the projected total amount for transactions in transaction currency.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the Opportunity subject area. This specific attribute can be used to describe the total amount for transactions in transaction currency.
Total Cost Estimate in Transaction Currency	This is a metric that can be used to describe a transaction under the Opportunity subject area. This specific attribute can be used to describe the total cost estimate for transactions in transaction currency.
Weighted Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the Opportunity subject area. This specific attribute can be used to describe the weighted total amount for transactions in transaction currency.
Range High in Transaction Currency	This is a metric that can be used to describe a transaction under the Opportunity subject area. This is the value which is manually inserted to represent the realizable value of the Opportunity record. This specific attribute can be used to describe the range high in transaction currency.

Metric	Metric Definition
Range Low in Transaction Currency	This is a metric that can be used to describe a transaction under the Opportunity subject area. This is the value which is manually inserted to represent the realizable value of the Opportunity record. This specific attribute can be used to describe the range low in transaction currency.
Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction under the Opportunity subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in base currency.
Estimated Budget in Base Currency	This is a metric that can be used to describe a transaction under the Opportunity subject area. The estimated budget is the prospect the customer has for this opportunity. This specific attribute can be used to describe the estimated budget for transactions in base currency.
Projected Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the Opportunity subject area. Projected total amount is the amount stemming from an Opportunity Record and recorded by a Sales Rep. This amount represents the forecasted amount of the Sales Opportunity. This specific attribute can be used to describe the projected total amount for transactions in base currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the Opportunity subject area. This specific attribute can be used to describe the total amount for transactions in base currency.
Total Cost Estimate in Base Currency	This is a metric that can be used to describe a transaction under the Opportunity subject area. This specific attribute can be used to describe the total cost estimate for transactions in base currency.
Weighted Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the Opportunity subject area. This specific attribute can be used to describe the weighted total amount for transactions in base currency.
Range High in Base Currency	This is a metric that can be used to describe a transaction under the Opportunity subject area. This is the value which is manually inserted to represent the realizable value of the Opportunity record. This specific attribute can be used to describe the range high in base currency.
Range Low in Base Currency	This is a metric that can be used to describe a transaction under the Opportunity subject area. This is the value which is manually inserted to represent the realizable value of the Opportunity record. This value is manually inserted to represent the realizable value of the Opportunity record. This specific attribute can be used to describe the range low in base currency.

ORACLE

Metric	Metric Definition
Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction under the Opportunity subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in analytics currency.
Estimated Budget in Analytics Currency	This is a metric that can be used to describe a transaction under the Opportunity subject area. The estimated budget is the prospect the customer has for this opportunity. This specific attribute can be used to describe the estimated budget for transactions in analytics currency.
Projected Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the Opportunity subject area. Projected total amount is the amount stemming from an Opportunity Record and recorded by a Sales Rep. This amount represents the forecasted amount of the Sales Opportunity. This specific attribute can be used to describe the projected total amount for transactions in analytics currency.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the Opportunity subject area. This specific attribute can be used to describe the total amount for transactions in analytics currency.
Total Cost Estimate in Analytics Currency	This is a metric that can be used to describe a transaction under the Opportunity subject area. This specific attribute can be used to describe the total cost estimate for transactions in analytics currency.
Weighted Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the Opportunity subject area. This specific attribute can be used to describe the weighted total amount for transactions in analytics currency.
Range High in Analytics Currency	This is a metric that can be used to describe a transaction under the Opportunity subject area. This is the value which is manually inserted to represent the realizable value of the Opportunity record. This specific attribute can be used to describe the range high in analytics currency.
Range Low in Analytics Currency	This is a metric that can be used to describe a transaction under the Opportunity subject area. This is the value which is manually inserted to represent the realizable value of the Opportunity record. This specific attribute can be used to describe the range low in analytics currency.
Total Number of Opportunity Lines	This is a derived metric that can be used to describe a transaction line under the Opportunity subject area. This specific attribute is derived by the count of the total number of opportunities line for every transaction line.
Item Quantity	This is a metric that can be used to describe a transaction line under the Opportunity subject area. This specific attribute can be used to describe the item quantity per line item for every transaction line.

Metric	Metric Definition
Line Estimated Gross Profit Percent	This is a metric that can be used to describe a transaction line under the Opportunity subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the line estimated gross profit percent for every transaction line.
Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Opportunity subject area. This specific attribute can be used to describe the line amount for every transaction line in transaction currency.
Cost Estimate in Transaction Currency	This is a metric that can be used to describe a transaction line under the Opportunity subject area. This specific attribute can be used to describe the cost estimate for every transaction line in transaction currency.
Cost Estimate Rate in Transaction Currency	This is a metric that can be used to describe a transaction line under the Opportunity subject area. This specific attribute can be used to describe the cost estimate rate for every transaction line in transaction currency.
Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Opportunity subject area. This specific attribute can be used to describe the amount credited for every transaction line in transaction currency.
Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Opportunity subject area. This specific attribute can be used to describe the amount debited for every transaction line in transaction currency.
Line Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction line under the Opportunity subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every transaction line in transaction currency.
Item Net Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Opportunity subject area. This specific attribute can be used to describe the item net amount for every transaction line in transaction currency.
Item Rate in Transaction Currency	This is a metric that can be used to describe a transaction line under the Opportunity subject area. This specific attribute can be used to describe the item rate for every transaction line in transaction currency.
Accounting Line Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Opportunity subject area. This specific attribute can be used to describe the accounting line credit amount for every transaction line in transaction currency.

Metric	Metric Definition
Accounting Line Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Opportunity subject area. This specific attribute can be used to describe the accounting line debit amount for every transaction line in transaction currency.
Line Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Opportunity subject area. This specific attribute can be used to describe the line amount for every transaction line in base currency.
Cost Estimate in Base Currency	This is a metric that can be used to describe a transaction line under the Opportunity subject area. This specific attribute can be used to describe the cost estimate for every transaction line in base currency.
Cost Estimate Rate in Base Currency	This is a metric that can be used to describe a transaction line under the Opportunity subject area. This specific attribute can be used to describe the cost estimate rate for every transaction line in base currency.
Credit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Opportunity subject area. This specific attribute can be used to describe the amount credited for every transaction line in base currency.
Debit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Opportunity subject area. This specific attribute can be used to describe the amount debited for every transaction line in base currency.
Line Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction line under the Opportunity subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every transaction line in base currency.
Item Net Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Opportunity subject area. This specific attribute can be used to describe the item net amount for every transaction line in base currency.
Item Rate in Base Currency	This is a metric that can be used to describe a transaction line under the Opportunity subject area. This specific attribute can be used to describe the item rate for every transaction line in base currency.
Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Opportunity subject area. This specific attribute can be used to describe the line amount for every transaction line in analytics currency.
Cost Estimate in Analytics Currency	This is a metric that can be used to describe a transaction line under the Opportunity subject area. This specific attribute can be used to describe the cost estimate for every transaction line in analytics currency.
Cost Estimate Rate in Analytics Currency	This is a metric that can be used to describe a transaction line under the Opportunity subject area. This specific attribute can be used to describe the cost estimate rate for every transaction line in analytics currency.

Metric	Metric Definition
Credit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Opportunity subject area. This specific attribute can be used to describe the amount credited for every transaction line in analytics currency.
Debit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Opportunity subject area. This specific attribute can be used to describe the amount debited for every transaction line in analytics currency.
Line Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction line under the Opportunity subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every transaction line in analytics currency.
Item Net Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Opportunity subject area. This specific attribute can be used to describe the item net amount for every transaction line in analytics currency.
Item Rate in Analytics Currency	This is a metric that can be used to describe a transaction line under the Opportunity subject area. This specific attribute can be used to describe the item rate for every transaction line in analytics currency.
Accounting Book Credit Amount	This is a metric that can be used to describe a transaction line under the Opportunity subject area. This specific attribute can be used to describe the accounting book credit amount for every transaction line in accounting book currency.
Accounting Book Debit Amount	This is a metric that can be used to describe a transaction line under the Opportunity subject area. This specific attribute can be used to describe the accounting book debit amount for every transaction line in accounting book currency.

NetSuite — Opportunity Snapshot

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date basis is the work order date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Opportunity Snapshots	This is a metric that can be used to describe a transaction under the NetSuite - Opportunity Snapshot.This specific attribute can be used to describe the Total Number of Opportunity Snapshots.
Estimated Gross Profit Percent	This is a metric that can be used to describe a transaction under the NetSuite - Opportunity Snapshot.This specific attribute can be used to describe the Estimated Gross Profit Percent.

Metric	Metric Definition
Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Opportunity Snapshot.This specific attribute can be used to describe the Estimated Gross Profit in Transaction Currency.
Estimated Budget in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Opportunity Snapshot.This specific attribute can be used to describe the Estimated Budget in Transaction Currency.
Projected Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Opportunity Snapshot.This specific attribute can be used to describe the Projected Total Amount in Transaction Currency.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Opportunity Snapshot.This specific attribute can be used to describe the Total Amount in Transaction Currency.
Total Cost Estimate in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Opportunity Snapshot.This specific attribute can be used to describe the Total Cost Estimate in Transaction Currency.
Weighted Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Opportunity Snapshot.This specific attribute can be used to describe the Weighted Total Amount in Transaction Currency.
Range High in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Opportunity Snapshot.This specific attribute can be used to describe the Range High in Transaction Currency.
Range Low in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Opportunity Snapshot.This specific attribute can be used to describe the Range Low in Transaction Currency.
Projected Alt Sales Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Opportunity Snapshot.This specific attribute can be used to describe the Projected Alt Sales Amount in Transaction Currency.
Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Opportunity Snapshot.This specific attribute can be used to describe the Estimated Gross Profit in Base Currency.
Estimated Budget in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Opportunity Snapshot.This specific attribute can be used to describe the Estimated Budget in Base Currency.
Projected Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Opportunity Snapshot.This specific attribute can be used to describe the Projected Total Amount in Base Currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Opportunity Snapshot.This specific attribute can be used to describe the Total Amount in Base Currency.

Metric	Metric Definition
Total Cost Estimate in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Opportunity Snapshot.This specific attribute can be used to describe the Total Cost Estimate in Base Currency.
Weighted Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Opportunity Snapshot.This specific attribute can be used to describe the Weighted Total Amount in Base Currency.
Range High in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Opportunity Snapshot.This specific attribute can be used to describe the Range High in Base Currency.
Range Low in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Opportunity Snapshot.This specific attribute can be used to describe the Range Low in Base Currency.
Projected Alt Sales Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Opportunity Snapshot.This specific attribute can be used to describe the Projected Alt Sales Amount in Base Currency.
Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Opportunity Snapshot.This specific attribute can be used to describe the Estimated Gross Profit in Analytics Currency.
Estimated Budget in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Opportunity Snapshot.This specific attribute can be used to describe the Estimated Budget in Analytics Currency.
Projected Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Opportunity Snapshot.This specific attribute can be used to describe the Projected Total Amount in Analytics Currency.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Opportunity Snapshot.This specific attribute can be used to describe the Total Amount in Analytics Currency.
Total Cost Estimate in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Opportunity Snapshot.This specific attribute can be used to describe the Total Cost Estimate in Analytics Currency.
Weighted Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Opportunity Snapshot.This specific attribute can be used to describe the Weighted Total Amount in Analytics Currency.
Range High in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Opportunity Snapshot.This specific attribute can be used to describe the Range High in Analytics Currency.
Range Low in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Opportunity Snapshot.This specific attribute can be used to describe the Range Low in Analytics Currency.

ORACLE

Metric	Metric Definition
Projected Alt Sales Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Opportunity Snapshot.This specific attribute can be used to describe the Projected Alt Sales Amount in Analytics Currency.

NetSuite — Ownership Transfer

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date basis is the work order date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Ownership Transfers	This is a metric that can be used to describe a transaction under the NetSuite - Ownership Transfer.This specific attribute can be used to describe the Total Number of Ownership Transfers.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Ownership Transfer.This specific attribute can be used to describe the Total Amount in Transaction Currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Ownership Transfer.This specific attribute can be used to describe the Total Amount in Base Currency.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Ownership Transfer.This specific attribute can be used to describe the Total Amount in Analytics Currency.
Total Number of Ownership Transfer Lines	This is a metric that can be used to describe a transaction under the NetSuite - Ownership Transfer.This specific attribute can be used to describe the Total Number of Ownership Transfer Lines.
Item Quantity	This is a metric that can be used to describe a transaction under the NetSuite - Ownership Transfer.This specific attribute can be used to describe the Item Quantity.
Item Rate Percent	This is a metric that can be used to describe a transaction under the NetSuite - Ownership Transfer.This specific attribute can be used to describe the Item Rate Percent.
Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Ownership Transfer.This specific attribute can be used to describe the Line Amount in Transaction Currency.
Item Net Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Ownership Transfer.This specific attribute can be used to describe the Item Net Amount in Transaction Currency.

Metric	Metric Definition
Item Rate in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Ownership Transfer.This specific attribute can be used to describe the Item Rate in Transaction Currency.
Accounting Line Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Ownership Transfer.This specific attribute can be used to describe the Accounting Line Credit Amount in Transaction Currency.
Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Ownership Transfer.This specific attribute can be used to describe the Credit Amount in Transaction Currency.
Accounting Line Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Ownership Transfer.This specific attribute can be used to describe the Accounting Line Debit Amount in Transaction Currency.
Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Ownership Transfer.This specific attribute can be used to describe the Debit Amount in Transaction Currency.
Line Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Ownership Transfer.This specific attribute can be used to describe the Line Amount in Base Currency.
Item Net Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Ownership Transfer.This specific attribute can be used to describe the Item Net Amount in Base Currency.
Item Rate in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Ownership Transfer.This specific attribute can be used to describe the Item Rate in Base Currency.
Credit Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Ownership Transfer.This specific attribute can be used to describe the Credit Amount in Base Currency.
Debit Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Ownership Transfer.This specific attribute can be used to describe the Debit Amount in Base Currency.
Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Ownership Transfer.This specific attribute can be used to describe the Line Amount in Analytics Currency.
Item Net Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Ownership Transfer.This specific attribute can be used to describe the Item Net Amount in Analytics Currency.
Item Rate in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Ownership Transfer.This specific attribute can be used to describe the Item Rate in Analytics Currency.

Metric	Metric Definition
Credit Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Ownership Transfer.This specific attribute can be used to describe the Credit Amount in Analytics Currency.
Debit Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Ownership Transfer.This specific attribute can be used to describe the Debit Amount in Analytics Currency.
Accounting Book Credit Amount	This is a metric that can be used to describe a transaction under the NetSuite - Ownership Transfer.This specific attribute can be used to describe the Accounting Book Credit Amount.
Accounting Book Debit Amount	This is a metric that can be used to describe a transaction under the NetSuite - Ownership Transfer.This specific attribute can be used to describe the Accounting Book Debit Amount.

NetSuite — Paycheck

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date basis is the work order date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Paycheck. This specific attribute can be used to describe the Total Amount in Transaction Currency.
Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Paycheck. This specific attribute can be used to describe the Line Amount in Transaction Currency.
Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Paycheck. This specific attribute can be used to describe the Credit Amount in Transaction Currency.
Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Paycheck. This specific attribute can be used to describe the Debit Amount in Transaction Currency.
Item Net Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Paycheck. This specific attribute can be used to describe the Item Net Amount in Transaction Currency.
Item Rate in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Paycheck. This specific attribute can be used to describe the Item Rate in Transaction Currency.

NetSuite — Paycheck Journal

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date basis is the work order date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Paycheck Journal. This specific attribute can be used to describe the Total Amount in Transaction Currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Paycheck Journal. This specific attribute can be used to describe the Total Amount in Base Currency.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Paycheck Journal. This specific attribute can be used to describe the Total Amount in Analytics Currency.
Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Paycheck Journal. This specific attribute can be used to describe the Line Amount in Transaction Currency.
Accounting Line Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Paycheck Journal. This specific attribute can be used to describe the Accounting Line Credit Amount in Transaction Currency.
Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Paycheck Journal. This specific attribute can be used to describe the Credit Amount in Transaction Currency.
Accounting Line Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Paycheck Journal. This specific attribute can be used to describe the Accounting Line Debit Amount in Transaction Currency.
Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Paycheck Journal. This specific attribute can be used to describe the Debit Amount in Transaction Currency.
Item Net Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Paycheck Journal. This specific attribute can be used to describe the Item Net Amount in Transaction Currency.
Line Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Paycheck Journal. This specific attribute can be used to describe the Line Amount in Base Currency.

ORACLE

Metric	Metric Definition
Credit Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Paycheck Journal. This specific attribute can be used to describe the Credit Amount in Base Currency.
Debit Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Paycheck Journal. This specific attribute can be used to describe the Debit Amount in Base Currency.
Item Net Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Paycheck Journal. This specific attribute can be used to describe the Item Net Amount in Base Currency.
Item Net Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Paycheck Journal. This specific attribute can be used to describe the Item Net Amount in Analytics Currency.
Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Paycheck Journal. This specific attribute can be used to describe the Line Amount in Analytics Currency.

Accounting Book Credit Amount	This is a metric that can be used to describe a transaction under the NetSuite - Paycheck Journal. This specific attribute can be used to describe the Accounting Book Credit Amount.
Accounting Book Debit Amount	This is a metric that can be used to describe a transaction under the NetSuite - Paycheck Journal. This specific attribute can be used to describe the Accounting Book Debit Amount.

NetSuite — Purchase Contract

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date basis is the vendor bill date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Purchase Contracts	This is a derived metric that can be used to describe a transaction under the Purchase Contract subject area. This specific attribute is derived by the count of the total number of purchase contracts for transactions.

Metric	Metric Definition
Number of Days Until Expiration	This is a derived metric that can be used to describe a transaction under the Purchase Contract subject area. This specific attribute is derived by the count of the total number of days until expiration for transactions.
Number of Rejected Purchase Contracts	This is a derived metric that can be used to describe a transaction under the Purchase Contract subject area. This specific attribute is derived by the count of the total number of rejected purchase contracts for transactions.
Rejected Percent	This is a derived metric that can be used to describe a transaction under the Purchase Contract subject area. This specific attribute is derived by the count of the rejected percent for transactions.
Maximum Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the Purchase Contract subject area. The maximum amount is the currency amount used to determine the required approval level, if you use approval routing. This specific attribute can be used to describe the maximum amount for transactions in transaction currency.
Minimum Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the Purchase Contract subject area. The minimum amount is the minimum total currency amount that must be ordered for the vendor to honor the contract. This specific attribute can be used to describe the minimum amount for transactions in transaction currency.
Maximum Amount in Base Currency	This is a metric that can be used to describe a transaction under the Purchase Contract subject area. The maximum amount is the currency amount used to determine the required approval level, if you use approval routing. This specific attribute can be used to describe the maximum amount for transactions in base currency.
Minimum Amount in Base Currency	This is a metric that can be used to describe a transaction under the Purchase Contract subject area. The minimum amount is the minimum total currency amount that must be ordered for the vendor to honor the contract. This specific attribute can be used to describe the minimum amount for transactions in base currency.
Maximum Amount In Analytics Currency	This is a metric that can be used to describe a transaction under the Purchase Contract subject area. The maximum amount is the currency amount used to determine the required approval level, if you use approval routing. This specific attribute can be used to describe the maximum amount for transactions in analytics currency.
Total Number of Purchase Contract Lines	This is a derived metric that can be used to describe a transaction line under the Purchase Contract subject area. This specific attribute is derived by the count of the total number of purchase contracts for every transaction line.

Metric	Metric Definition
Item Rate in Transaction Currency	This is a metric that can be used to describe a transaction line under the Purchase Contract subject area. This specific attribute can be used to describe the item rate for every transaction line in transaction currency.
Item Rate in Base Currency	This is a metric that can be used to describe a transaction line under the Purchase Contract subject area. This specific attribute can be used to describe the item rate for every transaction line in base currency.
Item Rate in Analytics Currency	This is a metric that can be used to describe a transaction line under the Purchase Contract subject area. This specific attribute can be used to describe the item rate for every transaction line in analytics currency.

NetSuite — Purchase Order

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date basis is the purchase order date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Purchase Orders	This is a derived metric that can be used to describe a transaction under the Purchase Order subject area. This specific attribute is derived by the count of the total number of purchase orders for transactions.
Estimated Gross Profit Percent	This is a metric that can be used to describe a transaction under the Purchase Order subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the estimated gross profit percent for transactions.
Number of Days Overdue	This is a derived metric that can be used to describe a transaction under the Purchase Order subject area. This specific attribute is derived by the count of the number of days overdue for transactions.
Number of Days Until Due Date	This is a derived metric that can be used to describe a transaction under the Purchase Order subject area. This specific attribute is derived by the count of the number of days until due date for transactions.
Number of Rejected Purchase Orders	This is a derived metric that can be used to describe a transaction under the Purchase Order subject area. This specific attribute is derived by the count of the number of rejected purchase orders for transactions.
Rejected Percent	This is a derived metric that can be used to describe a transaction under the Purchase Order subject area. This specific attribute is derived by the count of the rejected percent for transactions.

Metric	Metric Definition
Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction under the Purchase Order subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in transaction currency.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the Purchase Order subject area. This specific attribute can be used to describe the total amount for transactions in transaction currency.
Average Amount in Transaction Currency	This is a derived metric that can be used to describe a transaction under the Purchase Order subject area. This specific attribute is derived by the sum of the average amount for transactions in transaction currency.
Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction under the Purchase Order subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in base currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the Purchase Order subject area. This specific attribute can be used to describe the total amount for transactions in base currency.
Average Amount in Base Currency	This is a derived metric that can be used to describe a transaction under the Purchase Order subject area. This specific attribute is derived by the sum of the average amount for transactions in base currency.
Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction under the Purchase Order subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in analytics currency.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the Purchase Order subject area. This specific attribute can be used to describe the total amount for transactions in analytics currency.
Average Amount in Analytics Currency	This is a derived metric that can be used to describe a transaction under the Purchase Order subject area. This specific attribute is derived by the sum of the average amount for transactions in analytics currency.
Total Number of Purchase Order Lines	This is a derived metric that can be used to describe a transaction line under the Purchase Order subject area. This specific attribute is derived by the count of the total number of purchase order lines for every transaction line.
Item Quantity	This is a metric that can be used to describe a transaction line under the Purchase Order subject area. This specific attribute can be used to describe the item quantity for every transaction line.
Quantity Billed	This is a metric that can be used to describe a transaction line under the Purchase Order subject area. This specific attribute can be used to describe the quantity billed for every transaction line.

ORACLE

Metric	Metric Definition
Quantity Shipped/Received/Picked Up	This is a metric that can be used to describe a transaction line under the Purchase Order subject area. This specific attribute can be used to describe the Quantity Shipped/Received/Picked Up for every transaction line.
Quantity On Shipment	This is a metric that can be used to describe a transaction line under the Purchase Order subject area. This specific attribute can be used to describe the Quantity On Shipment for every transaction line.
Line Estimated Gross Profit Percent	This is a metric that can be used to describe a transaction line under the Purchase Order subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the line estimated gross profit percent for every transaction line.
Line Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction line under the Purchase Order subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every transaction line in transaction currency.
Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Purchase Order subject area. This specific attribute can be used to describe the line amount for every transaction line in transaction currency.
Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Purchase Order subject area. This specific attribute can be used to describe the amount credited for every transaction line in transaction currency.
Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Purchase Order subject area. This specific attribute can be used to describe the amount debited for every transaction line in transaction currency.
Net Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Purchase Order subject area. This specific attribute can be used to describe the net amount for every transaction line in transaction currency.
Item Rate in Transaction Currency	This is a metric that can be used to describe a transaction line under the Purchase Order subject area. This specific attribute can be used to describe the item rate for every transaction line in transaction currency.
Accounting Line Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Purchase Order subject area. This specific attribute can be used to describe the accounting line credit amount for every transaction line in transaction currency.

Metric	Metric Definition
Accounting Line Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Purchase Order subject area. This specific attribute can be used to describe the accounting line debit amount for every transaction line in transaction currency.
Line Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction line under the Purchase Order subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every transaction line in base currency.
Line Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Purchase Order subject area. This specific attribute can be used to describe the line amount for every transaction line in base currency.
Credit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Purchase Order subject area. This specific attribute can be used to describe the amount credited for every transaction line in base currency.
Debit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Purchase Order subject area. This specific attribute can be used to describe the amount debited for every transaction line in base currency.
Net Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Purchase Order subject area. This specific attribute can be used to describe the net amount for every transaction line in base currency.
Item Rate in Base Currency	This is a metric that can be used to describe a transaction line under the Purchase Order subject area. This specific attribute can be used to describe the item rate for every transaction line in base currency.
Line Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction line under the Purchase Order subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every transaction line in analytics currency.
Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Purchase Order subject area. This specific attribute can be used to describe the line amount for every transaction line in analytics currency.
Credit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Purchase Order subject area. This specific attribute can be used to describe the amount credited for every transaction line in analytics currency.
Debit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Purchase Order subject area. This specific attribute can be used to describe the amount debited for every transaction line in analytics currency.

ORACLE®

Metric	Metric Definition
Net Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Purchase Order subject area. This specific attribute can be used to describe the net amount for every transaction line in analytics currency.
Item Rate in Analytics Currency	This is a metric that can be used to describe a transaction line under the Purchase Order subject area. This specific attribute can be used to describe the item rate for every transaction line in analytics currency.
Accounting Book Credit Amount	This is a metric that can be used to describe a transaction line under the Purchase Order subject area. This specific attribute can be used to describe the accounting book credit amount for every transaction line in accounting book currency.
Accounting Book Debit Amount	This is a metric that can be used to describe a transaction line under the Purchase Order subject area. This specific attribute can be used to describe the accounting book debit amount for every transaction line in accounting book currency.

NetSuite — Purchase Order Snapshot

These metrics will be used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type will be configured during product implementation. Exchange rate date basis will be purchase order date to convert to analytics currency. Metrics in these folders will show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Purchase Order Snapshots	This metric provides count of total number of snapshots taken for all the purchase orders starting from the time snapshots begin.
Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction under the Purchase Order subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in transaction currency.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the Purchase Order subject area. This specific attribute can be used to describe the total amount for transactions in transaction currency.
Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction under the Purchase Order subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in base currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the Purchase Order subject area. This specific attribute can be used to describe the total amount for transactions in base currency.

Metric	Metric Definition
Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction under the Purchase Order subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in analytics currency.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the Purchase Order subject area. This specific attribute can be used to describe the total amount for transactions in analytics currency.

NetSuite — Purchase Requisition

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date basis is the purchase requisition date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Purchase Requisitions	This is a derived metric that can be used to describe a transaction under the Purchase Requisition subject area. This specific attribute is derived by the count of the total number of purchase requisitions for transactions.
Estimated Gross Profit Percent	This is a metric that can be used to describe a transaction under the Purchase Requisition subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the estimated gross profit percent for transactions.
Number of Days Until Due Date	This is a derived metric that can be used to describe a transaction under the Purchase Requisition subject area. This specific attribute is derived by the count of the number of days until due date for transactions.
Number of Rejected Purchase Requisitions	This is a derived metric that can be used to describe a transaction under the Purchase Requisition subject area. This specific attribute is derived by the count of the number of rejected purchase requisitions for transactions.
Rejected Percent	This is a derived metric that can be used to describe a transaction under the Purchase Requisition subject area. This specific attribute is derived by the count of the rejected percent for transactions.

Metric	Metric Definition
Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction under the Purchase Requisition subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in transaction currency.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the Purchase Requisition subject area. This specific attribute can be used to describe the total amount for transactions in transaction currency.
Average Amount in Transaction Currency	This is a derived metric that can be used to describe a transaction under the Purchase Requisition subject area. This specific attribute is derived by the sum of the average amount for transactions in transaction currency.
Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction under the Purchase Requisition subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in base currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the Purchase Requisition subject area. This specific attribute can be used to describe the total amount for transactions in base currency.
Average Amount in Base Currency	This is a derived metric that can be used to describe a transaction under the Purchase Requisition subject area. This specific attribute is derived by the sum of the average amount for transactions in base currency.
Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction under the Purchase Requisition subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in analytics currency.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the Purchase Requisition subject area. This specific attribute can be used to describe the total amount for transactions in analytics currency.
Average Amount in Analytics Currency	This is a derived metric that can be used to describe a transaction under the Purchase Requisition subject area. This specific attribute is derived by the sum of the average amount for transactions in analytics currency.
Total Number of Purchase Requisitions Lines	This is a derived metric that can be used to describe a transaction line under the Purchase Requisition subject area. This specific attribute is derived by the count of the total number of purchase requisitions lines for every transaction line.

Metric	Metric Definition
Line Estimated Gross Profit Percent	This is a metric that can be used to describe a transaction line under the Purchase Requisition subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the line estimated gross profit percent for every transaction line.
Line Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction line under the Purchase Requisition subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every transaction line in transaction currency.
Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Purchase Requisition subject area. This specific attribute can be used to describe the line amount for every transaction line in transaction currency.
Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Purchase Requisition subject area. This specific attribute can be used to describe the amount credited for every transaction line in transaction currency.
Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Purchase Requisition subject area. This specific attribute can be used to describe the amount debited for every transaction line in transaction currency.
Net Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Purchase Requisition subject area. This specific attribute can be used to describe the net amount for every transaction line in transaction currency.
Accounting Line Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Purchase Requisition subject area. This specific attribute can be used to describe the accounting line credit amount for every transaction line in transaction currency.
Accounting Line Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Purchase Requisition subject area. This specific attribute can be used to describe the accounting line debit amount for every transaction line in transaction currency.
Item Rate in Transaction Currency	This is a metric that can be used to describe a transaction line under the Purchase Requisition subject area. This specific attribute can be used to describe the item rate for every transaction line in transaction currency.

Metric	Metric Definition
Line Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction line under the Purchase Requisition subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every transaction line in base currency.
Line Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Purchase Requisition subject area. This specific attribute can be used to describe the line amount for every transaction line in base currency.
Credit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Purchase Requisition subject area. This specific attribute can be used to describe the amount credited for every transaction line in base currency.
Debit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Purchase Requisition subject area. This specific attribute can be used to describe the amount debited for every transaction line in base currency.
Net Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Purchase Requisition subject area. This specific attribute can be used to describe the net amount for every transaction line in base currency.
Item Rate In Base Currency	This is a metric that can be used to describe a transaction line under the Purchase Requisition subject area. This specific attribute can be used to describe the item rate for every transaction line in base currency.
Line Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction line under the Purchase Requisition subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every transaction line in analytics currency.
Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Purchase Requisition subject area. This specific attribute can be used to describe the line amount for every transaction line in analytics currency.
Credit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Purchase Requisition subject area. This specific attribute can be used to describe the amount credited for every transaction line in analytics currency.
Debit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Purchase Requisition subject area. This specific attribute can be used to describe the amount debited for every transaction line in analytics currency.

Metric	Metric Definition
Net Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Purchase Requisition subject area. This specific attribute can be used to describe the net amount for every transaction line in analytics currency.
Item Rate In Analytics Currency	This is a metric that can be used to describe a transaction line under the Purchase Requisition subject area. This specific attribute can be used to describe the item rate for every transaction line in analytics currency.
Accounting Book Credit Amount	This is a metric that can be used to describe a transaction line under the Purchase Requisition subject area. This specific attribute can be used to describe the accounting book credit amount for every transaction line in accounting book currency.
Accounting Book Debit Amount	This is a metric that can be used to describe a transaction line under the Purchase Requisition subject area. This specific attribute can be used to describe the accounting book debit amount for every transaction line in accounting book currency.

NetSuite — Return Authorization

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date basis is the return authorization date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Return Authorizations	This is a derived metric that can be used to describe a transaction under the Return Authorization subject area. This specific attribute is derived by the count of the total number of return authorizations for transactions.
Estimated Gross Profit Percent	This is a metric that can be used to describe a transaction under the Return Authorization subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the estimated gross profit percent for transactions.
Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction under the Return Authorization subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit percent for transactions in transaction currency.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the Return Authorization subject area. This specific attribute can be used to describe the total amount for transactions in transaction currency.

Metric	Metric Definition
Total Cost Estimate in Transaction Currency	This is a metric that can be used to describe a transaction under the Return Authorization subject area. This specific attribute can be used to describe the total cost estimate for transactions in transaction currency.
Average Amount in Transaction Currency	This is a derived metric that can be used to describe a transaction under the Return Authorization subject area. This specific attribute is derived by the sum of the average amount for transactions in transaction currency.
Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction under the Return Authorization subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit percent for transactions in base currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the Return Authorization subject area. This specific attribute can be used to describe the total amount for transactions in base currency.
Total Cost Estimate in Base Currency	This is a metric that can be used to describe a transaction under the Return Authorization subject area. This specific attribute can be used to describe the total cost estimate for transactions in base currency.
Average Amount in Base Currency	This is a derived metric that can be used to describe a transaction under the Return Authorization subject area. This specific attribute is derived by the sum of the average amount for transactions in base currency.
Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction under the Return Authorization subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit percent for transactions in analytics currency.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the Return Authorization subject area. This specific attribute can be used to describe the total amount for transactions in analytics currency.
Total Cost Estimate in Analytics Currency	This is a metric that can be used to describe a transaction under the Return Authorization subject area. This specific attribute can be used to describe the total cost estimate for transactions in analytics currency.
Average Amount in Analytics Currency	This is a derived metric that can be used to describe a transaction under the Return Authorization subject area. This specific attribute is derived by the sum of the average amount for transactions in analytics currency.
Total Number of Return Authorization Lines	This is a derived metric that can be used to describe a transaction line under the Return Authorization subject area. This specific attribute is derived by the count of the total number of return authorizations for every transaction line.
Item Quantity	This is a metric that can be used to describe a transaction line under the Return Authorization subject area. This specific attribute can be used to describe the item quantity for every transaction line.

Metric	Metric Definition
Line Estimated Gross Profit Percent	This is a metric that can be used to describe a transaction line under the Return Authorization subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the estimated gross profit percent for every transaction line.
Cost Estimate in Transaction Currency	This is a metric that can be used to describe a transaction line under the Return Authorization subject area. This specific attribute can be used to describe the cost estimate for every transaction line in transaction currency.
Cost Estimate Rate in Transaction Currency	This is a metric that can be used to describe a transaction line under the Return Authorization subject area. This specific attribute can be used to describe the cost estimate rate for every transaction line in transaction currency.
Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Return Authorization subject area. This specific attribute can be used to describe the credit amount for every transaction line in transaction currency.
Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Return Authorization subject area. This specific attribute can be used to describe the debit amount for every transaction line in transaction currency.
Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Return Authorization subject area. This specific attribute can be used to describe the line amount for every transaction line in transaction currency.
Net Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Return Authorization subject area. This specific attribute can be used to describe the net amount for every transaction line in transaction currency.
Item Rate in Transaction Currency	This is a metric that can be used to describe a transaction line under the Return Authorization subject area. This specific attribute can be used to describe the item rate for every transaction line in transaction currency.
Line Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction line under the Return Authorization subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every transaction line in transaction currency.
Accounting Line Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Return Authorization subject area. This specific attribute can be used to describe the accounting line credit amount for every transaction line in transaction currency.

ORACLE®

Metric	Metric Definition
Accounting Line Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the Return Authorization subject area. This specific attribute can be used to describe the accounting line debit amount for every transaction line in transaction currency.
Line Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Return Authorization subject area. This specific attribute can be used to describe the line amount for every transaction line in base currency.
Cost Estimate in Base Currency	This is a metric that can be used to describe a transaction line under the Return Authorization subject area. This specific attribute can be used to describe the cost estimate for every transaction line in base currency.
Cost Estimate Rate in Base Currency	This is a metric that can be used to describe a transaction line under the Return Authorization subject area. This specific attribute can be used to describe the cost estimate rate for every transaction line in base currency.
Credit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Return Authorization subject area. This specific attribute can be used to describe the credit amount for every transaction line in base currency.
Debit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Return Authorization subject area. This specific attribute can be used to describe the debit amount for every transaction line in base currency.
Net Amount in Base Currency	This is a metric that can be used to describe a transaction line under the Return Authorization subject area. This specific attribute can be used to describe the net amount for every transaction line in base currency.
Item Rate in Base Currency	This is a metric that can be used to describe a transaction line under the Return Authorization subject area. This specific attribute can be used to describe the item rate for every transaction line in base currency.
Line Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction line under the Return Authorization subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every transaction line in base currency.
Cost Estimate in Analytics Currency	This is a metric that can be used to describe a transaction line under the Return Authorization subject area. This specific attribute can be used to describe the cost estimate for every transaction line in analytics currency.
Cost Estimate Rate in Analytics Currency	This is a metric that can be used to describe a transaction line under the Return Authorization subject area. This specific attribute can be used to describe the cost estimate rate for every transaction line in analytics currency.

Metric	Metric Definition
Credit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Return Authorization subject area. This specific attribute can be used to describe the credit amount for every transaction line in analytics currency.
Debit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Return Authorization subject area. This specific attribute can be used to describe the debit amount for every transaction line in analytics currency.
Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Return Authorization subject area. This specific attribute can be used to describe the line amount for every transaction line in analytics currency.
Net Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the Return Authorization subject area. This specific attribute can be used to describe the net amount for every transaction line in analytics currency.
Item Rate in Analytics Currency	This is a metric that can be used to describe a transaction line under the Return Authorization subject area. This specific attribute can be used to describe the item rate for every transaction line in analytics currency.
Line Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction line under the Return Authorization subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every transaction line in analytics currency.
Accounting Book Credit Amount	This is a metric that can be used to describe a transaction line under the Return Authorization subject area. This specific attribute can be used to describe the accounting book credit amount for every transaction line in accounting book currency.
Accounting Book Debit Amount	This is a metric that can be used to describe a transaction line under the Return Authorization subject area. This specific attribute can be used to describe the accounting book debit amount for every transaction line in accounting book currency.

NetSuite — Return Authorization Snapshot

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date

basis is the return authorization date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Return Authorization Snapshots	This metric provides count of total number of snapshots taken for all the return authorizations starting from the time snapshots begin.
Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction under the Return Authorization subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit percent for transactions in transaction currency.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the Return Authorization subject area. This specific attribute can be used to describe the total amount for transactions in transaction currency.
Total Cost Estimate in Transaction Currency	This is a metric that can be used to describe a transaction under the Return Authorization subject area. This specific attribute can be used to describe the total cost estimate for transactions in transaction currency.
Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction under the Return Authorization subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit percent for transactions in base currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the Return Authorization subject area. This specific attribute can be used to describe the total amount for transactions in base currency.
Total Cost Estimate in Base Currency	This is a metric that can be used to describe a transaction under the Return Authorization subject area. This specific attribute can be used to describe the total cost estimate for transactions in base currency.
Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction under the Return Authorization subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit percent for transactions in analytics currency.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the Return Authorization subject area. This specific attribute can be used to describe the total amount for transactions in analytics currency.
Total Cost Estimate in Analytics Currency	This is a metric that can be used to describe a transaction under the Return Authorization subject area. This specific attribute can be used to describe the total cost estimate for transactions in analytics currency.

NetSuite — Revenue Arrangement

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics

currency and exchange rate type are configured during product implementation. The exchange rate date basis is the return arrangement date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Revenue Arrangements	This is a derived metric that can be used to describe a transaction under the Revenue Arrangements subject area. This specific attribute is derived by the count of the total number of revenue arrangements for transactions.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the Revenue Arrangements subject area. This specific attribute can be used to describe the total amount for transactions in transaction currency.
Total Number of Revenue Arrangement Lines	This is a derived metric that can be used to describe a transaction under the Revenue Arrangements subject area. This specific attribute is derived by the count of the total number of revenue arrangements line for every transaction line.
Net Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the Revenue Arrangements subject area. This specific attribute can be used to describe the net amount for every transaction line in transaction currency.
Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the Revenue Arrangements subject area. This specific attribute can be used to describe the line amount for every transaction line in transaction currency.
Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the Revenue Arrangements subject area. This specific attribute can be used to describe the credit amount for every transaction line in transaction currency.
Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the Revenue Arrangements subject area. This specific attribute can be used to describe the debit amount for every transaction line in transaction currency.

NetSuite — Revenue Arrangement Snapshot

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date

basis is the work order date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Revenue Arrangement Snapshots	This is a metric that can be used to describe a transaction under the NetSuite - Revenue Arrangement Snapshot.This specific attribute can be used to describe the Total Number of Revenue Arrangement Snapshots.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Revenue Arrangement Snapshot.This specific attribute can be used to describe the Total Amount in Transaction Currency.

NetSuite — Revenue Commitment

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date basis is the work order date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Revenue Commitments	This is a metric that can be used to describe a transaction under the NetSuite - Revenue Commitment.This specific attribute can be used to describe the Total Number of Revenue Commitments.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Revenue Commitment.This specific attribute can be used to describe the Total Amount in Transaction Currency.
Recognized Revenue in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Revenue Commitment.This specific attribute can be used to describe the Recognized Revenue in Transaction Currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Revenue Commitment.This specific attribute can be used to describe the Total Amount in Base Currency.
Recognized Revenue in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Revenue Commitment.This specific attribute can be used to describe the Recognized Revenue in Base Currency.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Revenue Commitment.This specific attribute can be used to describe the Total Amount in Analytics Currency.

Metric	Metric Definition
Recognized Revenue in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Revenue Commitment.This specific attribute can be used to describe the Recognized Revenue in Analytics Currency.
Total Number of Revenue Commitment Lines	This is a metric that can be used to describe a transaction under the NetSuite - Revenue Commitment.This specific attribute can be used to describe the Total Number of Revenue Commitment Lines.
Item Quantity	This is a metric that can be used to describe a transaction under the NetSuite - Revenue Commitment.This specific attribute can be used to describe the Item Quantity.
Item Rate Percent	This is a metric that can be used to describe a transaction under the NetSuite - Revenue Commitment.This specific attribute can be used to describe the Item Rate Percent.
Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Revenue Commitment.This specific attribute can be used to describe the Line Amount in Transaction Currency.
Item Net Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Revenue Commitment.This specific attribute can be used to describe the Item Net Amount in Transaction Currency.
Item Rate in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Revenue Commitment.This specific attribute can be used to describe the Item Rate in Transaction Currency.
Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Revenue Commitment.This specific attribute can be used to describe the Credit Amount in Transaction Currency.
Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Revenue Commitment.This specific attribute can be used to describe the Debit Amount in Transaction Currency.
Accounting Line Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Revenue Commitment.This specific attribute can be used to describe the Accounting Line Credit Amount in Transaction Currency.
Accounting Line Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the NetSuite - Revenue Commitment.This specific attribute can be used to describe the Accounting Line Debit Amount in Transaction Currency.
Line Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Revenue Commitment.This specific attribute can be used to describe the Line Amount in Base Currency.

Metric	Metric Definition
Item Net Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Revenue Commitment.This specific attribute can be used to describe the Item Net Amount in Base Currency.
Item Rate in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Revenue Commitment.This specific attribute can be used to describe the Item Rate in Base Currency.
Credit Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Revenue Commitment.This specific attribute can be used to describe the Credit Amount in Base Currency.
Debit Amount in Base Currency	This is a metric that can be used to describe a transaction under the NetSuite - Revenue Commitment.This specific attribute can be used to describe the Debit Amount in Base Currency.
Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Revenue Commitment.This specific attribute can be used to describe the Line Amount in Analytics Currency.
Item Net Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Revenue Commitment.This specific attribute can be used to describe the Item Net Amount in Analytics Currency.
Item Rate in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Revenue Commitment.This specific attribute can be used to describe the Item Rate in Analytics Currency.
Credit Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Revenue Commitment.This specific attribute can be used to describe the Credit Amount in Analytics Currency.
Debit Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the NetSuite - Revenue Commitment.This specific attribute can be used to describe the Debit Amount in Analytics Currency.
Accounting Book Credit Amount	This is a metric that can be used to describe a transaction under the NetSuite - Revenue Commitment.This specific attribute can be used to describe the Accounting Book Credit Amount.
Accounting Book Debit Amount	This is a metric that can be used to describe a transaction under the NetSuite - Revenue Commitment.This specific attribute can be used to describe the Accounting Book Debit Amount.
Accounting Book Amount	This is a metric that can be used to describe a transaction under the NetSuite - Revenue Commitment.This specific attribute can be used to describe the Accounting Book Amount.

NetSuite — Sales Order

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics

currency and exchange rate type are configured during product implementation. The exchange rate date basis is the Sales Order date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Sales Orders	This is a derived metric that can be used to describe a transaction under the sales order subject area. This specific attribute is derived by the count of the total number of sales order for transactions.
Total Number of Late Shipped Orders	This is a derived metric that can be used to describe a transaction under the sales order subject area. This specific attribute is derived by the count of the total number of late shipped orders in transactions.
Total Number of On-Time Shipped Orders	This is a derived metric that can be used to describe a transaction under the sales order subject area. This specific attribute is derived by the count of the total number of on-time shipped orders in transactions.
Estimated Gross Profit Percent	This is a metric that can be used to describe a transaction under the sales order subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the estimated gross profit percent in transactions.
Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction under the sales order subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit percent in transaction currency.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the sales order subject area. This specific attribute can be used to describe the total amount in transaction currency.
Total Cost Estimate in Transaction Currency	This is a metric that can be used to describe a transaction under the sales order subject area. This specific attribute can be used to describe the total cost estimate in transaction currency.
Average Order Amount in Transaction Currency	This is a derived metric that can be used to describe a transaction under the sales order subject area. This specific attribute is derived by the sum of the average order amount in transaction currency.
Cancelled Sales Order Amount in Transaction Currency	This is a derived metric that can be used to describe a transaction under the sales order subject area. This specific attribute is derived by the sum of the cancelled sales order amount in transaction currency.
Net Order Amount in Transaction Currency	This is a derived metric that can be used to describe a transaction under the sales order subject area. This specific attribute is derived by the sum of the net order amount in transaction currency.

Metric	Metric Definition
Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction under the sales order subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit percent in base currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the sales order subject area. This specific attribute can be used to describe the total amount in base currency.
Total Cost Estimate in Base Currency	This is a metric that can be used to describe a transaction under the sales order subject area. This specific attribute can be used to describe the total cost estimate in base currency.
Average Order Amount in Base Currency	This is a derived metric that can be used to describe a transaction under the sales order subject area. This specific attribute is derived by the sum of the average order amount in base currency.
Cancelled Sales Order Amount in Base Currency	This is a derived metric that can be used to describe a transaction under the sales order subject area. This specific attribute is derived by the sum of the cancelled sales order amount in base currency.
Net Order Amount in Base Currency	This is a derived metric that can be used to describe a transaction under the sales order subject area. This specific attribute is derived by the sum of the net order amount in base currency.
Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction under the sales order subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit percent in analytics currency.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the sales order subject area. This specific attribute can be used to describe the total amount in analytics currency.
Total Cost Estimate in Analytics Currency	This is a metric that can be used to describe a transaction under the sales order subject area. This specific attribute can be used to describe the total cost estimate in analytics currency.
Average Order Amount in Analytics Currency	This is a derived metric that can be used to describe a transaction under the sales order subject area. This specific attribute is derived by the sum of the average order amount in analytics currency.
Cancelled Sales Order Amount in Analytics Currency	This is a derived metric that can be used to describe a transaction under the sales order subject area. This specific attribute is derived by the sum of the cancelled sales order amount in analytics currency.
Net Order Amount in Analytics Currency	This is a derived metric that can be used to describe a transaction under the sales order subject area. This specific attribute is derived by the sum of the net order amount in analytics currency.

Metric	Metric Definition
Total Number of Sales Order Lines	This is a derived metric that can be used to describe a transaction line under the sales order subject area. This specific attribute is derived by the count of the total number of sales order for every transaction line.
Item Quantity	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the item quantity for every transaction line.
Quantity Allocated	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the quantity allocated for every transaction line.
Quantity Backordered	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the quantity backordered for every transaction line.
Quantity Billed	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the quantity billed for every transaction line.
Quantity Committed	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the quantity committed for every transaction line.
Quantity Picked	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the quantity picked for every transaction line.
Quantity Requested to Fulfill	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the quantity requested to fulfill for every transaction line.
Quantity Shipped	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the quantity shipped for every transaction line.
Line Estimated Gross Profit Percent	This is a metric that can be used to describe a transaction line under the sales order subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the estimated gross profit for every transaction line.
Cost Estimate in Transaction Currency	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the cost estimated in transaction currency for every transaction line.
Cost Estimate Rate in Transaction Currency	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the cost estimated rate in transaction currency for every transaction line.

ORACLE

Metric	Metric Definition
Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the amount credited in transaction currency for every transaction line.
Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the amount debited in transaction currency for every transaction line.
Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the line amount in transaction currency for every transaction line.
Item Net Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the item net amount in transaction currency for every transaction line.
Discount Amount in Transaction Currency	This is a derived metric that can be used to describe a transaction line under the sales order subject area. Discount amount is the amount of the sales order after factoring in all discounts including volume and customer specific discounts as well as line item discounts. This specific attribute is derived by the sum of the discounted amount in transaction currency for every transaction line.
Line Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction line under the sales order subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit in transaction currency for every transaction line.
Item Rate in Transaction Currency	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the item rate in transaction currency for every transaction line.
Accounting Line Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the accounting line credit amount in transaction currency for every transaction line.
Accounting Line Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the accounting line debit amount in transaction currency for every transaction line.
Cost Estimate in Base Currency	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the cost estimated in base currency for every transaction line.
Cost Estimate Rate in Base Currency	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the cost estimated rate in base currency for every transaction line.

ORACLE®

Metric	Metric Definition
Credit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the amount credited in base currency for every transaction line.
Debit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the amount debited in base currency for every transaction line.
Line Amount in Base Currency	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the line amount in base currency for every transaction line.
Item Net Amount in Base Currency	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the item net amount in base currency for every transaction line.
Discount Amount in Base Currency	This is a derived metric that can be used to describe a transaction line under the sales order subject area. Discount amount is the amount of the sales order after factoring in all discounts including volume and customer specific discounts as well as line item discounts. This specific attribute is derived by the sum of the discounted amount in base currency for every transaction line.
Line Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction line under the sales order subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit in base currency for every transaction line.
Item Rate in Base Currency	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the item rate in base currency for every transaction line.
Cost Estimate in Analytics Currency	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the cost estimated in analytics currency for every transaction line.
Cost Estimate Rate in Analytics Currency	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the cost estimated rate in analytics currency for every transaction line.
Credit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the amount credited in analytics currency for every transaction line.
Debit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the amount debited in analytics currency for every transaction line.
Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the line amount in analytics currency for every transaction line.

Metric	Metric Definition
Item Net Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the item net amount in analytics currency for every transaction line.
Discount Amount in Analytics Currency	This is a derived metric that can be used to describe a transaction line under the sales order subject area. Discount amount is the amount of the sales order after factoring in all discounts including volume and customer specific discounts as well as line item discounts. This specific attribute is derived by the sum of the discounted amount in analytics currency for every transaction line.
Line Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction line under the sales order subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit in analytics currency for every transaction line.
Item Rate in Analytics Currency	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the item rate in analytics currency for every transaction line.
Accounting Book Credit Amount	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the accounting book credit amount in accounting book currency for every transaction line.
Accounting Book Debit Amount	This is a metric that can be used to describe a transaction line under the sales order subject area. This specific attribute can be used to describe the accounting book debit amount in accounting book currency for every transaction line.

NetSuite — Sales Order Snapshot

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date basis is the invoice accounting date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction under the sales order subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit percent in transaction currency.

Metric	Metric Definition
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the sales order subject area. This specific attribute can be used to describe the total amount in transaction currency.
Total Cost Estimate in Transaction Currency	This is a metric that can be used to describe a transaction under the sales order subject area. This specific attribute can be used to describe the total cost estimate in transaction currency.
Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction under the sales order subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit percent in base currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the sales order subject area. This specific attribute can be used to describe the total amount in base currency.
Total Cost Estimate in Base Currency	This is a metric that can be used to describe a transaction under the sales order subject area. This specific attribute can be used to describe the total cost estimate in base currency.
Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction under the sales order subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit percent in analytics currency.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the sales order subject area. This specific attribute can be used to describe the total amount in analytics currency.
Total Cost Estimate in Analytics Currency	This is a metric that can be used to describe a transaction under the sales order subject area. This specific attribute can be used to describe the total cost estimate in analytics currency.
Total Number of Sales Order Snapshot	This metric provides count of total number of snapshots taken for all the sales orders starting from the time snapshots begin.

NetSuite — Sales Tax Payment

These metrics will be used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type will be configured during product implementation. Exchange rate date basis will be work order date to convert to analytics currency. Metrics in these folders will show amounts in their respective currencies.

Metric	Metric Definition
Total Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Sales Tax Payment subject area. This specific attribute is derived by Total Amount in Transaction Currency.

Metric	Metric Definition
Total Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Sales Tax Payment subject area. This specific attribute is derived by Total Amount in Base Currency.
Total Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Sales Tax Payment subject area. This specific attribute is derived by Total Amount in Analytics Currency.
Line Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Sales Tax Payment subject area. This specific attribute is derived by count of the Line Amount in Transaction Currency.
Accounting Line Credit Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Sales Tax Payment subject area. This specific attribute is derived by count of the Accounting Line Credit Amount in Transaction Currency.
Credit Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Sales Tax Payment subject area. This specific attribute is derived by Credit Amount in Transaction Currency.
Accounting Line Debit Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Sales Tax Payment subject area. This specific attribute is derived by count of the Accounting Line Debit Amount in Transaction Currency.
Debit Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Sales Tax Payment subject area. This specific attribute is derived by Debit Amount in Transaction Currency.
Item Net Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Sales Tax Payment subject area. This specific attribute is derived by Item Net Amount in Transaction Currency.
Line Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Sales Tax Payment subject area. This specific attribute is derived by count of the Line Amount in Base Currency.
Credit Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Sales Tax Payment subject area. This specific attribute is derived by Credit Amount in Base Currency.
Debit Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Sales Tax Payment subject area. This specific attribute is derived by Debit Amount in Base Currency.
Item Net Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Sales Tax Payment subject area. This specific attribute is derived by Item Net Amount in Base Currency.
Line Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Sales Tax Payment subject area. This specific attribute is derived by count of the Line Amount in Analytics Currency.

Metric	Metric Definition
Credit Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Sales Tax Payment subject area. This specific attribute is derived by Credit Amount in Analytics Currency.
Debit Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Sales Tax Payment subject area. This specific attribute is derived by Debit Amount in Analytics Currency.
Item Net Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Sales Tax Payment subject area. This specific attribute is derived by Item Net Amount in Analytics Currency.
Accounting Book Credit Amount	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Sales Tax Payment subject area. This specific attribute is derived by Accounting Book Credit Amount.
Accounting Book Debit Amount	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Sales Tax Payment subject area. This specific attribute is derived by Accounting Book Debit Amount.

NetSuite — Statement Charge

These metrics will be used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type will be configured during product implementation. Exchange rate date basis will be work order date to convert to analytics currency. Metrics in these folders will show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Number of Days in Period	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Number of Days in Period.
Total Number of Statement Charges	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Total Number of Statement Charges.
Estimated Gross Profit Percent	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Estimated Gross Profit Percent.
Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Estimated Gross Profit in Transaction Currency.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Total Amount in Transaction Currency.

Metric	Metric Definition
Paid Amount in Transaction Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Paid Amount in Transaction Currency.
Unpaid Amount in Transaction Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Unpaid Amount in Transaction Currency.
Recognized Revenue in Transaction Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Recognized Revenue in Transaction Currency.
Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Estimated Gross Profit in Base Currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Total Amount in Base Currency.
Paid Amount in Base Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Paid Amount in Base Currency.
Unpaid Amount in Base Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Unpaid Amount in Base Currency.
Recognized Revenue in Base Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Recognized Revenue in Base Currency.
Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Estimated Gross Profit in Analytics Currency.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Total Amount in Analytics Currency.
Paid Amount in Analytics Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Paid Amount in Analytics Currency.
Unpaid Amount in Analytics Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Unpaid Amount in Analytics Currency.
Recognized Revenue in Analytics Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Recognized Revenue in Analytics Currency.

Metric	Metric Definition
Total Number of Statement Charge Lines	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Total Number of Statement Charge Lines.
Item Quantity	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Item Quantity.
Item Rate Percent	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Item Rate Percent.
Item Net Amount in Transaction Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Item Net Amount in Transaction Currency.
Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Line Amount in Transaction Currency.
Item Rate in Transaction Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Item Rate in Transaction Currency.
Line Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Line Estimated Gross Profit in Transaction Currency.
Linked Amount in Transaction Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Linked Amount in Transaction Currency.
Line Amount Paid in Transaction Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Line Amount Paid in Transaction Currency.
Line Amount Unpaid in Transaction Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Line Amount Unpaid in Transaction Currency.
Used Payment Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Used Payment Line Amount in Transaction Currency.
Unused Payment Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Unused Payment Line Amount in Transaction Currency.
Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Credit Amount in Transaction Currency.

ORACLE

Metric	Metric Definition
Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Debit Amount in Transaction Currency.
Accounting Line Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Accounting Line Credit Amount in Transaction Currency.
Accounting Line Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Accounting Line Debit Amount in Transaction Currency.
Item Net Amount in Base Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Item Net Amount in Base Currency.
Line Amount in Base Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Line Amount in Base Currency.
Item Rate in Base Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Item Rate in Base Currency.
Line Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Line Estimated Gross Profit in Base Currency.
Linked Amount in Base Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Linked Amount in Base Currency.
Line Amount Paid in Base Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Line Amount Paid in Base Currency.
Line Amount Unpaid in Base Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Line Amount Unpaid in Base Currency.
Used Payment Line Amount in Base Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Used Payment Line Amount in Base Currency.
Unused Payment Line Amount in Base Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Unused Payment Line Amount in Base Currency.
Credit Amount in Base Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Credit Amount in Base Currency.

Metric	Metric Definition
Debit Amount in Base Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Debit Amount in Base Currency.
Item Net Amount in Analytics Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Item Net Amount in Analytics Currency.
Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Line Amount in Analytics Currency.
Item Rate in Analytics Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Item Rate in Analytics Currency.
Line Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Line Estimated Gross Profit in Analytics Currency.
Linked Amount in Analytics Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Linked Amount in Analytics Currency.
Line Amount Paid in Analytics Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Line Amount Paid in Analytics Currency.
Line Amount Unpaid in Analytics Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Line Amount Unpaid in Analytics Currency.
Used Payment Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Used Payment Line Amount in Analytics Currency.
Unused Payment Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Unused Payment Line Amount in Analytics Currency.
Credit Amount in Analytics Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Credit Amount in Analytics Currency.
Debit Amount in Analytics Currency	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Debit Amount in Analytics Currency.
Accounting Book Credit Amount	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Accounting Book Credit Amount.

Metric	Metric Definition
Accounting Book Debit Amount	This is a metric that can be used to describe a transaction under NetSuite - Statement Charge.This specific attribute can be used to describe the Accounting Book Debit Amount.

NetSuite — Store Pickup Fulfillment

These metrics will be used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type will be configured during product implementation. Exchange rate date basis will be work order date to convert to analytics currency. Metrics in these folders will show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Number of Days in Period	This is a metric that can be used to describe a transaction under NetSuite - Store Pickup Fulfillment.This specific attribute can be used to describe the Number of Days in Period.
Total Number of Store Pickup Fulfillments	This is a metric that can be used to describe a transaction under NetSuite - Store Pickup Fulfillment.This specific attribute can be used to describe the Total Number of Store Pickup Fulfillments.
Total Number of Store Pickup Fulfillment Lines	This is a metric that can be used to describe a transaction under NetSuite - Store Pickup Fulfillment.This specific attribute can be used to describe the Total Number of Store Pickup Fulfillment Lines.
Item Quantity	This is a metric that can be used to describe a transaction under NetSuite - Store Pickup Fulfillment.This specific attribute can be used to describe the Item Quantity.
Item Rate Percent	This is a metric that can be used to describe a transaction under NetSuite - Store Pickup Fulfillment.This specific attribute can be used to describe the Item Rate Percent.
Accounting Line Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction under NetSuite - Store Pickup Fulfillment.This specific attribute can be used to describe the Accounting Line Credit Amount in Transaction Currency.
Accounting Line Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction under NetSuite - Store Pickup Fulfillment.This specific attribute can be used to describe the Accounting Line Debit Amount in Transaction Currency.
Item Rate in Transaction Currency	This is a metric that can be used to describe a transaction under NetSuite - Store Pickup Fulfillment.This specific attribute can be used to describe the Item Rate in Transaction Currency.

Metric	Metric Definition
Item Rate in Base Currency	This is a metric that can be used to describe a transaction under NetSuite - Store Pickup Fulfillment.This specific attribute can be used to describe the Item Rate in Base Currency.
Item Rate in Analytics Currency	This is a metric that can be used to describe a transaction under NetSuite - Store Pickup Fulfillment.This specific attribute can be used to describe the Item Rate in Analytics Currency.
Accounting Book Credit Amount	This is a metric that can be used to describe a transaction under NetSuite - Store Pickup Fulfillment.This specific attribute can be used to describe the Accounting Book Credit Amount.
Accounting Book Debit Amount	This is a metric that can be used to describe a transaction under NetSuite - Store Pickup Fulfillment.This specific attribute can be used to describe the Accounting Book Debit Amount.

NetSuite — Tax Liability Cheque

These metrics will be used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type will be configured during product implementation. Exchange rate date basis will be work order date to convert to analytics currency. Metrics in these folders will show amounts in their respective currencies.

Metric	Metric Definition
Total Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Tax Liability Cheque subject area. This specific attribute is derived by Total Amount in Transaction Currency.
Total Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Tax Liability Cheque subject area. This specific attribute is derived by Total Amount in Base Currency.
Total Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Tax Liability Cheque subject area. This specific attribute is derived by Total Amount in Analytics Currency.
Line Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Tax Liability Cheque subject area. This specific attribute is derived by count of the Line Amount in Transaction Currency.
Accounting Line Credit Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Tax Liability Cheque subject area. This specific attribute is derived by count of the Accounting Line Credit Amount in Transaction Currency.
Credit Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Tax Liability Cheque subject area. This specific attribute is derived by Credit Amount in Transaction Currency.

Metric	Metric Definition
Accounting Line Debit Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Tax Liability Cheque subject area. This specific attribute is derived by count of the Accounting Line Debit Amount in Transaction Currency.
Debit Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Tax Liability Cheque subject area. This specific attribute is derived by Debit Amount in Transaction Currency.
Item Net Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Tax Liability Cheque subject area. This specific attribute is derived by Item Net Amount in Transaction Currency.
Line Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Tax Liability Cheque subject area. This specific attribute is derived by count of the Line Amount in Base Currency.
Credit Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Tax Liability Cheque subject area. This specific attribute is derived by Credit Amount in Base Currency.
Debit Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Tax Liability Cheque subject area. This specific attribute is derived by Debit Amount in Base Currency.
Item Net Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Tax Liability Cheque subject area. This specific attribute is derived by Item Net Amount in Base Currency.
Line Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Tax Liability Cheque subject area. This specific attribute is derived by count of the Line Amount in Analytics Currency.
Credit Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Tax Liability Cheque subject area. This specific attribute is derived by Credit Amount in Analytics Currency.
Debit Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Tax Liability Cheque subject area. This specific attribute is derived by Debit Amount in Analytics Currency.
Item Net Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Tax Liability Cheque subject area. This specific attribute is derived by Item Net Amount in Analytics Currency.
Accounting Book Credit Amount	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Tax Liability Cheque subject area. This specific attribute is derived by Accounting Book Credit Amount.
Accounting Book Debit Amount	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Tax Liability Cheque subject area. This specific attribute is derived by Accounting Book Debit Amount.

NetSuite — Timesheet

These metrics will be used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type will be configured during product implementation. Exchange rate date basis will be work order date to convert to analytics currency. Metrics in these folders will show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Hours	This is a metric that can be used to describe a transaction under NetSuite - Timesheet.This specific attribute can be used to describe the Total Hours.
Allocated Hours	This is a metric that can be used to describe a transaction under NetSuite - Timesheet.This specific attribute can be used to describe the Allocated Hours.
Planned Hours	This is a metric that can be used to describe a transaction under NetSuite - Timesheet.This specific attribute can be used to describe the Planned Hours.
Submitted Hours	This is a metric that can be used to describe a transaction under NetSuite - Timesheet.This specific attribute can be used to describe the Submitted Hours.
Rejected Hours	This is a metric that can be used to describe a transaction under NetSuite - Timesheet.This specific attribute can be used to describe the Rejected Hours.
Work Calendar Hours	This is a metric that can be used to describe a transaction under NetSuite - Timesheet.This specific attribute can be used to describe the Work Calendar Hours.
Total Number of Timesheets	This is a metric that can be used to describe a transaction under NetSuite - Timesheet.This specific attribute can be used to describe the Total Number of Timesheets.
Hours	This is a metric that can be used to describe a transaction under NetSuite - Timesheet.This specific attribute can be used to describe the Hours.
Billing Rate	This is a metric that can be used to describe a transaction under NetSuite - Timesheet.This specific attribute can be used to describe the Billing Rate.
Total Number of Timesheet Details	This is a metric that can be used to describe a transaction under NetSuite - Timesheet.This specific attribute can be used to describe the Total Number of Timesheet Details.

NetSuite — Transfer

These metrics will be used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and

exchange rate type will be configured during product implementation. Exchange rate date basis will be work order date to convert to analytics currency.

Metric	Metric Definition
Total Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Transfer subject area. This specific attribute is derived by Total Amount in Transaction Currency
Total Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Transfer subject area. This specific attribute is derived by Total Amount in Base Currency
Total Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Transfer subject area. This specific attribute is derived by Total Amount in Analytics Currency
Line Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Transfer subject area. This specific attribute is derived by count of the Line Amount in Transaction Currency
Credit Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Transfer subject area. This specific attribute is derived by Credit Amount in Transaction Currency
Debit Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Transfer subject area. This specific attribute is derived by Debit Amount in Transaction Currency
Item Net Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Transfer subject area. This specific attribute is derived by Item Net Amount in Transaction Currency
Accounting Line Credit Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Transfer subject area. This specific attribute is derived by count of the Accounting Line Credit Amount in Transaction Currency
Accounting Line Debit Amount in Transaction Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Transfer subject area. This specific attribute is derived by count of the Accounting Line Debit Amount in Transaction Currency
Line Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Transfer subject area. This specific attribute is derived by count of the Line Amount in Base Currency
Credit Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Transfer subject area. This specific attribute is derived by Credit Amount in Base Currency
Debit Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Transfer subject area. This specific attribute is derived by Debit Amount in Base Currency

Metric	Metric Definition
Item Net Amount in Base Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Transfer subject area. This specific attribute is derived by Item Net Amount in Base Currency
Line Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Transfer subject area. This specific attribute is derived by count of the Line Amount in Analytics Currency
Credit Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Transfer subject area. This specific attribute is derived by Credit Amount in Analytics Currency
Debit Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Transfer subject area. This specific attribute is derived by Debit Amount in Analytics Currency
Item Net Amount in Analytics Currency	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Transfer subject area. This specific attribute is derived by Item Net Amount in Analytics Currency
Accounting Book Credit Amount	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Transfer subject area. This specific attribute is derived by Accounting Book Credit Amount
Accounting Book Debit Amount	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Transfer subject area. This specific attribute is derived by Accounting Book Debit Amount

NetSuite — Transfer Order

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date basis is the transfer order date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Transfer Orders	This is a derived metric that can be used to describe a transaction under the transfer orders subject area. This specific attribute is derived by the count of the total number of transfer order for transactions.
Estimated Gross Profit Percent	This is a metric that can be used to describe a transaction under the transfer orders subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the estimated gross profit percent of transfer order for transactions.

Metric	Metric Definition
Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction under the transfer orders subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit of transfer order in transaction currency for transactions.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the transfer orders subject area. This specific attribute can be used to describe the estimated gross profit of transfer order in transaction currency for transactions.
Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction under the transfer orders subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit of transfer order in base currency for transactions.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the transfer orders subject area. This specific attribute can be used to describe the estimated gross profit of transfer order in base currency for transactions.
Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction under the transfer orders subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit of transfer order in analytics currency for transactions.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the transfer orders subject area. This specific attribute can be used to describe the estimated gross profit of transfer order in analytics currency for transactions.
Total Number of Transfer Order Lines	This is a derived metric that can be used to describe a transaction line under the transfer order subject area. This specific attribute is derived by the count of the total number of transfer order lines for every transaction line.
Item Quantity	This is a metric that can be used to describe a transaction line under the transfer orders subject area. This specific attribute can be used to describe the item quantity for every transaction line.
Quantity Allocated	This is a metric that can be used to describe a transaction line under the transfer orders subject area. This specific attribute can be used to describe the quantity allocated for every transaction line.
Quantity Back Ordered	This is a metric that can be used to describe a transaction line under the transfer orders subject area. This specific attribute can be used to describe the quantity backordered for every transaction line.
Quantity Committed	This is a metric that can be used to describe a transaction line under the transfer orders subject area. This specific attribute can be used to describe the quantity committed for every transaction line.

Metric	Metric Definition
Quantity Picked	This is a metric that can be used to describe a transaction line under the transfer orders subject area. This specific attribute can be used to describe the quantity picked for every transaction line.
Quantity Shipped/Received/Picked Up	This is a metric that can be used to describe a transaction line under the transfer orders subject area. This specific attribute can be used to describe the quantity shipped for every transaction line.
Line Estimated Gross Profit Percent	This is a metric that can be used to describe a transaction line under the transfer orders subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the line estimated gross profit percent for every transaction line.
Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the transfer orders subject area. This specific attribute can be used to describe the amount credited for every transaction line in transaction currency.
Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the transfer orders subject area. This specific attribute can be used to describe the amount debited for every transaction line in transaction currency.
Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the transfer orders subject area. This specific attribute can be used to describe the line amount for every transaction line in transaction currency.
Item Net Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the transfer orders subject area. This specific attribute can be used to describe the item net amount for every transaction line in transaction currency.
Line Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction line under the transfer orders subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every transaction line in transaction currency.
Item Rate in Transaction Currency	This is a metric that can be used to describe a transaction line under the transfer orders subject area. This specific attribute can be used to describe the item rate for every transaction line in transaction currency.
Accounting Line Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the transfer orders subject area. This specific attribute can be used to describe the accounting line credit amount for every transaction line in transaction currency.

ORACLE®

Metric	Metric Definition
Accounting Line Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the transfer orders subject area. This specific attribute can be used to describe the accounting line debit amount for every transaction line in transaction currency.
Credit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the transfer orders subject area. This specific attribute can be used to describe the amount credited for every transaction line in base currency.
Debit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the transfer orders subject area. This specific attribute can be used to describe the amount debited for every transaction line in base currency.
Line Amount in Base Currency	This is a metric that can be used to describe a transaction line under the transfer orders subject area. This specific attribute can be used to describe the line amount for every transaction line in base currency.
Item Net Amount in Base Currency	This is a metric that can be used to describe a transaction line under the transfer orders subject area. This specific attribute can be used to describe the item net amount for every transaction line in base currency.
Line Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction line under the transfer orders subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every transaction line in base currency.
Item Rate in Base Currency	This is a metric that can be used to describe a transaction line under the transfer orders subject area. This specific attribute can be used to describe the item rate for every transaction line in base currency.
Credit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the transfer orders subject area. This specific attribute can be used to describe the amount credited for every transaction line in analytics currency.
Debit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the transfer orders subject area. This specific attribute can be used to describe the amount debited for every transaction line in analytics currency.
Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the transfer orders subject area. This specific attribute can be used to describe the line amount for every transaction line in analytics currency.
Item Net Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the transfer orders subject area. This specific attribute can be used to describe the item net amount for every transaction line in analytics currency.

Metric	Metric Definition
Line Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction line under the transfer orders subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every transaction line in analytics currency.
Item Rate in Analytics Currency	This is a metric that can be used to describe a transaction line under the transfer orders subject area. This specific attribute can be used to describe the item rate for every transaction line in analytics currency.
Accounting Book Credit Amount	This is a metric that can be used to describe a transaction line under the transfer orders subject area. This specific attribute can be used to describe the accounting book credit amount for every transaction line in accounting book currency.
Accounting Book Debit Amount	This is a metric that can be used to describe a transaction line under the transfer orders subject area. This specific attribute can be used to describe the accounting book debit amount for every transaction line in accounting book currency.

NetSuite — Vendor Bill

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date basis is the vendor bill date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Vendor Bills	This is a derived metric that can be used to describe a transaction under the vendor bill subject area. This specific attribute is derived by the count of the total number of vendor bills for transactions.
Estimated Gross Profit Percent	This is a metric that can be used to describe a transaction under the vendor bill subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the estimated gross profit percent for transactions.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the vendor bill subject area. This specific attribute can be used to describe the total amount for transactions in transaction currency.

Metric	Metric Definition
Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction under the vendor bill subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in transaction currency.
Paid Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the vendor bill subject area. This specific attribute can be used to describe the paid amount for transactions in transaction currency.
Unpaid Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the vendor bill subject area. This specific attribute can be used to describe the unpaid amount for transactions in transaction currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the vendor bill subject area. This specific attribute can be used to describe the total amount for transactions in base currency.
Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction under the vendor bill subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in base currency.
Paid Amount in Base Currency	This is a metric that can be used to describe a transaction under the vendor bill subject area. This specific attribute can be used to describe the paid amount for transactions in base currency.
Unpaid Amount in Base Currency	This is a metric that can be used to describe a transaction under the vendor bill subject area. This specific attribute can be used to describe the unpaid amount for transactions in base currency.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the vendor bill subject area. This specific attribute can be used to describe the total amount for transactions in analytics currency.
Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction under the vendor bill subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in analytics currency.
Paid Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the vendor bill subject area. This specific attribute can be used to describe the paid amount for transactions in analytics currency.
Unpaid Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the vendor bill subject area. This specific attribute can be used to describe the unpaid amount for transactions in analytics currency.
Total Number of Vendor Bill Lines	This is a derived metric that can be used to describe a transaction line under the vendor bill subject area. This specific attribute is derived by the count of the total number of vendor bills for every transaction line.

Metric	Metric Definition
Item Quantity	This is a metric that can be used to describe a transaction line under the vendor bill subject area. This specific attribute can be used to describe the item quantity for every transaction line.
Line Estimated Gross Profit Percent	This is a metric that can be used to describe a transaction line under the vendor bill subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the line estimated gross profit percent for every transaction line.
Item Rate in Transaction Currency	This is a metric that can be used to describe a transaction line under the vendor bill subject area. This specific attribute can be used to describe the item rate for every transaction line in transaction currency.
Net Amount in Transacton Currency	This is a metric that can be used to describe a transaction line under the vendor bill subject area. This specific attribute can be used to describe the net amount for every transaction line in transaction currency.
Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the vendor bill subject area. This specific attribute can be used to describe the line amount for every transaction line in transaction currency.
Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the vendor bill subject area. This specific attribute can be used to describe the amount credited for every transaction line in transaction currency.
Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the vendor bill subject area. This specific attribute can be used to describe the amount debited for every transaction line in transaction currency.
Line Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction line under the vendor bill subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every transaction line in transaction currency.
Paid Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the vendor bill subject area. This specific attribute can be used to describe the paid line amount for every transaction line in transaction currency.
Unpaid Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the vendor bill subject area. This specific attribute can be used to describe the unpaid line amount for every transaction line in transaction currency.
Linked Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the vendor bill subject area. Linked amount is the amount that relates to a corresponding and related transaction. This specific attribute can be used to describe the linked amount for every transaction line in transaction currency.

ORACLE®

Metric	Metric Definition
Accounting Line Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the vendor bill subject area. This specific attribute can be used to describe the accounting line credit amount for every transaction line in transaction currency.
Accounting Line Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the vendor bill subject area. This specific attribute can be used to describe the accounting line debit amount for every transaction line in transaction currency.
Item Rate in Base Currency	This is a metric that can be used to describe a transaction line under the vendor bill subject area. This specific attribute can be used to describe the item rate for every transaction line in base currency.
Net Amount in Base Currency	This is a metric that can be used to describe a transaction line under the vendor bill subject area. This specific attribute can be used to describe the net amount for every transaction line in base currency.
Line Amount in Base Currency	This is a metric that can be used to describe a transaction line under the vendor bill subject area. This specific attribute can be used to describe the line amount for every transaction line in base currency.
Credit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the vendor bill subject area. This specific attribute can be used to describe the amount credited for every transaction line in base currency.
Debit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the vendor bill subject area. This specific attribute can be used to describe the amount debited for every transaction line in base currency.
Line Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction line under the vendor bill subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every transaction line in base currency.
Paid Line Amount in Base Currency	This is a metric that can be used to describe a transaction line under the vendor bill subject area. This specific attribute can be used to describe the paid line amount for every transaction line in base currency.
Unpaid Line Amount in Base Currency	This is a metric that can be used to describe a transaction line under the vendor bill subject area. This specific attribute can be used to describe the unpaid line amount for every transaction line in base currency.
Linked Amount in Base Currency	This is a metric that can be used to describe a transaction line under the vendor bill subject area. Linked amount is the amount that relates to a corresponding and related transaction. This specific attribute can be used to describe the linked amount for every transaction line in base currency.
Item Rate in Analytics Currency	This is a metric that can be used to describe a transaction line under the vendor bill subject area. This specific attribute can be used to describe the item rate for every transaction line in analytics currency.

Metric	Metric Definition
Net Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the vendor bill subject area. This specific attribute can be used to describe the net amount for every transaction line in analytics currency.
Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the vendor bill subject area. This specific attribute can be used to describe the line amount for every transaction line in analytics currency.
Credit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the vendor bill subject area. This specific attribute can be used to describe the amount credited for every transaction line in analytics currency.
Debit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the vendor bill subject area. This specific attribute can be used to describe the amount debited for every transaction line in analytics currency.
Line Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction line under the vendor bill subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every transaction line in analytics currency.
Paid Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the vendor bill subject area. This specific attribute can be used to describe the paid line amount for every transaction line in analytics currency.
Unpaid Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the vendor bill subject area. This specific attribute can be used to describe the unpaid line amount for every transaction line in analytics currency.
Linked Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the vendor bill subject area. Linked amount is the amount that relates to a corresponding and related transaction. This specific attribute can be used to describe the linked amount for every transaction line in analytics currency.
Accounting Book Credit Amount	This is a metric that can be used to describe a transaction line under the vendor bill subject area. This specific attribute can be used to describe the accounting book credit amount for every transaction line in accounting book currency.
Accounting Book Debit Amount	This is a metric that can be used to describe a transaction line under the vendor bill subject area. This specific attribute can be used to describe the accounting book debit amount for every transaction line in accounting book currency.

NetSuite — Vendor Bill Credit

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date

basis is the vendor bill credit date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Vendor Bill Credits	This is a derived metric that can be used to describe a transaction under the vendor bill credit subject area. This specific attribute is derived by the count of the total number of vendor bill credits for transactions.
Estimated Gross Profit Percent	This is a metric that can be used to describe a transaction under the vendor bill credit subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the estimated gross profit percent for transactions.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the vendor bill credit subject area. This specific attribute can be used to describe the total amount for transactions in transaction currency.
Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction under the vendor bill credit subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in transaction currency.
Unused Payment Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the vendor bill credit subject area. This specific attribute can be used to describe the unused payment amount for transactions in transaction currency.
Used Payment Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the vendor bill credit subject area. This specific attribute can be used to describe the used payment amount for transactions in transaction currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the vendor bill credit subject area. This specific attribute can be used to describe the total amount for transactions in base currency.
Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction under the vendor bill credit subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in base currency.
Unused Payment Amount in Base Currency	This is a metric that can be used to describe a transaction under the vendor bill credit subject area. This specific attribute can be used to describe the unused payment amount for transactions in base currency.
Used Payment Amount in Base Currency	This is a metric that can be used to describe a transaction under the vendor bill credit subject area. This specific attribute can be used to describe the used payment amount for transactions in base currency.

The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in analytics currency.
Used Payment Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the vendor bill credit subject area. This specific attribute can be used to describe the unused payment amount for transactions in analytics currency.
Unused Payment Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the vendor bill credit subject area. This specific attribute can be used to describe the used payment amount for transactions in analytics currency.
Total Number of Vendor Bill Credit Lines	This is a derived metric that can be used to describe a transaction line under the vendor bill credit subject area. This specific attribute is derived by the count of the total number of vendor bill credits for every transaction line.
Item Quantity	This is a metric that can be used to describe a transaction line under the vendor bill credit subject area. This specific attribute can be used to describe the item quantity for every transaction line.
Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the vendor bill credit subject area. This specific attribute can be used to describe the line amount for every transaction line in transaction currency.
Item Net Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the vendor bill credit subject area. This specific attribute can be used to describe the item net amount for every transaction line in transaction currency.
Used Payment Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the vendor bill credit subject area. This specific attribute can be used to describe the used payment line amount for every transaction line in transaction currency.
Unused Payment Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the vendor bill credit subject area. This specific attribute can be used to describe the unused payment line amount for every transaction line in transaction currency.
Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the vendor bill credit subject area. This specific attribute can be used to describe the credit amount for every transaction line in transaction currency.
Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the vendor bill credit subject area. This specific attribute can be used to describe the debit amount for every transaction line in transaction currency.

ORACLE

Metric	Metric Definition
Accounting Line Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the vendor bill credit subject area. This specific attribute can be used to describe the accounting line credit amount for every transaction line in transaction currency.
Accounting Line Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the vendor bill credit subject area. This specific attribute can be used to describe the accounting line debit amount for every transaction line in transaction currency.
Item Rate in Transaction Currency	This is a metric that can be used to describe a transaction line under the vendor bill credit subject area. This specific attribute can be used to describe the item rate for every transaction line in transaction currency.
Line Amount in Base Currency	This is a metric that can be used to describe a transaction line under the vendor bill credit subject area. This specific attribute can be used to describe the line amount for every transaction line in base currency.
Item Net Amount in Base Currency	This is a metric that can be used to describe a transaction line under the vendor bill credit subject area. This specific attribute can be used to describe the item net amount for every transaction line in base currency.
Used Payment Line Amount in Base Currency	This is a metric that can be used to describe a transaction line under the vendor bill credit subject area. This specific attribute can be used to describe the used payment line amount for every transaction line in base currency.
Unused Payment Line Amount in Base Currency	This is a metric that can be used to describe a transaction line under the vendor bill credit subject area. This specific attribute can be used to describe the unused payment line amount for every transaction line in base currency.
Credit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the vendor bill credit subject area. This specific attribute can be used to describe the credit amount for every transaction line in base currency.
Debit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the vendor bill credit subject area. This specific attribute can be used to describe the debit amount for every transaction line in base currency.
Item Rate in Base Currency	This is a metric that can be used to describe a transaction line under the vendor bill credit subject area. This specific attribute can be used to describe the item rate for every transaction line in base currency.
Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the vendor bill credit subject area. This specific attribute can be used to describe the line amount for every transaction line in analytics currency.
Item Net Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the vendor bill credit subject area. This specific attribute can be used to describe the item net amount for every transaction line in analytics currency.

Metric	Metric Definition
Used Payment Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the vendor bill credit subject area. This specific attribute can be used to describe the used payment line amount for every transaction line in analytics currency.
Unused Payment Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the vendor bill credit subject area. This specific attribute can be used to describe the unused payment line amount for every transaction line in analytics currency.
Credit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the vendor bill credit subject area. This specific attribute can be used to describe the credit amount for every transaction line in analytics currency.
Debit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the vendor bill credit subject area. This specific attribute can be used to describe the debit amount for every transaction line in analytics currency.
Item Rate in Analytics Currency	This is a metric that can be used to describe a transaction line under the vendor bill credit subject area. This specific attribute can be used to describe the item rate for every transaction line in analytics currency.
Accounting Book Credit Amount	This is a metric that can be used to describe a transaction line under the vendor bill credit subject area. This specific attribute can be used to describe the accounting book credit amount for every transaction line in accounting book currency.
Accounting Book Debit Amount	This is a metric that can be used to describe a transaction line under the vendor bill credit subject area. This specific attribute can be used to describe the accounting book debit amount for every transaction line in accounting book currency.

NetSuite — Vendor Bill Payment

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction under NetSuite - Vendor Prepayment Application.This specific attribute can be used to describe the Debit Amount in Transaction Currency.
Line Amount in Base Currency	This is a metric that can be used to describe a transaction under NetSuite - Vendor Prepayment Application.This specific attribute can be used to describe the Line Amount in Base Currency.
Net Amount in Base Currency	This is a metric that can be used to describe a transaction under NetSuite - Vendor Prepayment Application.This specific attribute can be used to describe the Net Amount in Base Currency.
Linked Amount in Base Currency	This is a metric that can be used to describe a transaction under NetSuite - Vendor Prepayment Application.This specific attribute can be used to describe the Linked Amount in Base Currency.

ORACLE

Metric	Metric Definition
Used Line Amount in Base Currency	This is a metric that can be used to describe a transaction under NetSuite - Vendor Prepayment Application.This specific attribute can be used to describe the Used Line Amount in Base Currency.
Unused Line Amount in Base Currency	This is a metric that can be used to describe a transaction under NetSuite - Vendor Prepayment Application.This specific attribute can be used to describe the Unused Line Amount in Base Currency.
Credit Amount in Base Currency	This is a metric that can be used to describe a transaction under NetSuite - Vendor Prepayment Application.This specific attribute can be used to describe the Credit Amount in Base Currency.
Debit Amount in Base Currency	This is a metric that can be used to describe a transaction under NetSuite - Vendor Prepayment Application.This specific attribute can be used to describe the Debit Amount in Base Currency.
Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction under NetSuite - Vendor Prepayment Application.This specific attribute can be used to describe the Line Amount in Analytics Currency.
Net Amount in Analytics Currency	This is a metric that can be used to describe a transaction under NetSuite - Vendor Prepayment Application.This specific attribute can be used to describe the Net Amount in Analytics Currency.
Linked Amount in Analytics Currency	This is a metric that can be used to describe a transaction under NetSuite - Vendor Prepayment Application.This specific attribute can be used to describe the Linked Amount in Analytics Currency.
Used Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction under NetSuite - Vendor Prepayment Application.This specific attribute can be used to describe the Used Line Amount in Analytics Currency.
Unused Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction under NetSuite - Vendor Prepayment Application.This specific attribute can be used to describe the Unused Line Amount in Analytics Currency.
Credit Amount in Analytics Currency	This is a metric that can be used to describe a transaction under NetSuite - Vendor Prepayment Application.This specific attribute can be used to describe the Credit Amount in Analytics Currency.
Debit Amount in Analytics Currency	This is a metric that can be used to describe a transaction under NetSuite - Vendor Prepayment Application.This specific attribute can be used to describe the Debit Amount in Analytics Currency.
Accounting Book Credit Amount	This is a metric that can be used to describe a transaction under NetSuite - Vendor Prepayment Application.This specific attribute can be used to describe the Accounting Book Credit Amount.
Accounting Book Debit Amount	This is a metric that can be used to describe a transaction under NetSuite - Vendor Prepayment Application.This specific attribute can be used to describe the Accounting Book Debit Amount.

ORACLE

NetSuite — Vendor Return Authorization

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date basis is the vendor return authorization date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Vendor Return Authorizations	This is a derived metric that can be used to describe a transaction under the vendor return authorization subject area. This specific attribute is derived by the count of the total number of vendor return authorizations for transactions.
Estimated Gross Profit Percent	This is a metric that can be used to describe a transaction under the vendor return authorization subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the estimated gross profit percent for transactions.
Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction under the vendor return authorization subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in transaction currency.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the vendor return authorization subject area. This specific attribute can be used to describe the total amount for transactions in transaction currency.
Average Amount in Transaction Currency	This is a derived metric that can be used to describe a transaction under the vendor return authorization subject area. This specific attribute is derived by the sum of the average amount for transactions in transaction currency.
Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction under the vendor return authorization subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in base currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the vendor return authorization subject area. This specific attribute can be used to describe the total amount for transactions in base currency.
Average Amount in Base Currency	This is a derived metric that can be used to describe a transaction under the vendor return authorization subject area. This specific attribute is derived by the sum of the average amount for transactions in base currency.

Metric	Metric Definition
Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction under the vendor return authorization subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in analytics currency.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the vendor return authorization subject area. This specific attribute can be used to describe the total amount for transactions in analytics currency.
Average Amount in Analytics Currency	This is a derived metric that can be used to describe a transaction under the vendor return authorization subject area. This specific attribute is derived by the sum of the average amount for transactions in analytics currency.
Total Number of Vendor Return Authorization Lines	This is a derived metric that can be used to describe a transaction line under the vendor return authorization subject area. This specific attribute is derived by the count of the total number of vendor return authorizations lines for every transaction line.
Item Quantity	This is a metric that can be used to describe a transaction line under the vendor return authorization subject area. This specific attribute can be used to describe the item quantity for every transaction line.
Quantity Billed	This is a metric that can be used to describe a transaction line under the vendor return authorization subject area. This specific attribute can be used to describe the quantity billed for every transaction line.
Quantity Shipped/Received/Picked Up	This is a metric that can be used to describe a transaction line under the vendor return authorization subject area. This specific attribute can be used to describe the Quantity Shipped/Received/Picked Up for every transaction line.
Line Estimated Gross Profit Percent	This is a metric that can be used to describe a transaction line under the vendor return authorization subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the line estimated gross profit percent for every transaction line.
Line Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction line under the vendor return authorization subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every transaction line in transaction currency.
Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the vendor return authorization subject area. This specific attribute can be used to describe the line amount for every transaction line in transaction currency.

Metric	Metric Definition
Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the vendor return authorization subject area. This specific attribute can be used to describe the amount credited for every transaction line in transaction currency.
Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the vendor return authorization subject area. This specific attribute can be used to describe the amount debited for every transaction line in transaction currency.
Net Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the vendor return authorization subject area. This specific attribute can be used to describe the net amount for every transaction line in transaction currency.
Accounting Line Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the vendor return authorization subject area. This specific attribute can be used to describe the accounting line credit amount for every transaction line in transaction currency.
Accounting Line Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the vendor return authorization subject area. This specific attribute can be used to describe the accounting line debit amount for every transaction line in transaction currency.
Item Rate in Transaction Currency	This is a metric that can be used to describe a transaction line under the vendor return authorization subject area. This specific attribute can be used to describe the item rate for every transaction line in transaction currency.
Line Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction line under the vendor return authorization subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every transaction line in base currency.
Line Amount in Base Currency	This is a metric that can be used to describe a transaction line under the vendor return authorization subject area. This specific attribute can be used to describe the line amount for every transaction line in base currency.
Credit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the vendor return authorization subject area. This specific attribute can be used to describe the amount credited for every transaction line in base currency.
Debit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the vendor return authorization subject area. This specific attribute can be used to describe the amount debited for every transaction line in base currency.

ORACLE®

Metric	Metric Definition
Net Amount in Base Currency	This is a metric that can be used to describe a transaction line under the vendor return authorization subject area. This specific attribute can be used to describe the net amount for every transaction line in base currency.
Item Rate in Base Currency	This is a metric that can be used to describe a transaction line under the vendor return authorization subject area. This specific attribute can be used to describe the item rate for every transaction line in base currency.
Line Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction line under the vendor return authorization subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every transaction line in analytics currency.
Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the vendor return authorization subject area. This specific attribute can be used to describe the line amount for every transaction line in analytics currency.
Credit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the vendor return authorization subject area. This specific attribute can be used to describe the amount credited for every transaction line in analytics currency.
Debit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the vendor return authorization subject area. This specific attribute can be used to describe the amount debited for every transaction line in analytics currency.
Net Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the vendor return authorization subject area. This specific attribute can be used to describe the net amount for every transaction line in analytics currency.
Item Rate in Analytics Currency	This is a metric that can be used to describe a transaction line under the vendor return authorization subject area. This specific attribute can be used to describe the item rate for every transaction line in analytics currency.
Accounting Book Credit Amount	This is a metric that can be used to describe a transaction line under the vendor return authorization subject area. This specific attribute can be used to describe the accounting book credit amount for every transaction line in accounting book currency.
Accounting Book Debit Amount	This is a metric that can be used to describe a transaction line under the vendor return authorization subject area. This specific attribute can be used to describe the accounting book debit amount for every transaction line in accounting book currency.

ORACLE®

NetSuite — Vendor Return Authorization Snapshot

These metrics will be used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type will be configured during product implementation. Exchange rate date basis will be vendor return authorization date to convert to analytics currency. Metrics in these folders will show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Vendor Return Authorizations Snapshots	This metric provides count of total number of snapshots taken for all the vendor return authorizations starting from the time snapshots begin.
Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction under the vendor return authorization subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in transaction currency.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the vendor return authorization subject area. This specific attribute can be used to describe the total amount for transactions in transaction currency.
Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction under the vendor return authorization subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in base currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the vendor return authorization subject area. This specific attribute can be used to describe the total amount for transactions in base currency.
Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction under the vendor return authorization subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the estimated gross profit for transactions in analytics currency.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the vendor return authorization subject area. This specific attribute can be used to describe the total amount for transactions in analytics currency.

NetSuite — Work Order

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date

basis is the work order date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Work Orders	This is a derived metric that can be used to describe a transaction under the work order subject area. This specific attribute is derived by the count of the total number of work orders for transactions.
Total Number of Work Order Lines	This is a derived metric that can be used to describe a transaction line under the work order subject area. This specific attribute is derived by the count of the total number of work order line for every transaction line.
Item Quantity	This is a metric that can be used to describe a transaction line under the work order subject area. This specific attribute can be used to describe the item quantity for every transaction line.

NetSuite — Work Order Close

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date basis is the work order close date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the work order close subject area. This specific attribute can be used to describe the total amount for transactions in transaction currency.
Total Amount in Base Currency	Total Amount in Base Currency This is a metric that can be used to describe a transaction under the work order close subject area. This specific attribute can be used to describe the total amount for transactions in base currency.
Total Amount in Analytics Currency	Total Amount in Analytics Currency This is a metric that can be used to describe a transaction under the work order close subject area. This specific attribute can be used to describe the total amount for transactions in analytics currency.
Total Number Of Work Order Closes	This is a derived metric that can be used to describe a transaction under the work order close subject area. This specific attribute is derived by the count of the total number of work order closes for transactions.
Build Quantity	This is a metric that can be used to describe a transaction under the work order close subject area. This specific attribute can be used to describe the build quantity for transactions.

Metric	Metric Definition
Total Number of Work Order Close Lines	This is a derived metric that can be used to describe a transaction line under the work order closes subject area. This specific attribute is derived by the count of the total number of work order close line for every transaction line.
Item Quantity	This is a metric that can be used to describe a transaction line under the work order closes subject area. This specific attribute can be used to describe the item quantity for every transaction line.
Line Estimated Gross Profit Percent	This is a metric that can be used to describe a transaction line under the work order closes subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the line estimated gross profit percent for every transaction line.
Item Rate in Transaction Currency	This is a metric that can be used to describe a transaction line under the work order closes subject area. This specific attribute can be used to describe the item rate for every transaction line in transaction currency.
Item Net Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the work order closes subject area. This specific attribute can be used to describe the item net amount for every transaction line in transaction currency.
Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the work order closes subject area. This specific attribute can be used to describe the line amount for every transaction line in transaction currency.
Line Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction line under the work order closes subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the item rate for every transaction line in transaction currency.
Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the work order closes subject area. This specific attribute can be used to describe the item net amount for every transaction line in transaction currency.
Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the work order closes subject area. This specific attribute can be used to describe the line amount for every transaction line in transaction currency.
Item Rate in Base Currency	This is a metric that can be used to describe a transaction line under the work order closes subject area. This specific attribute can be used to describe the item rate for every transaction line in base currency.

Metric	Metric Definition
Item Net Amount in Base Currency	This is a metric that can be used to describe a transaction line under the work order closes subject area. This specific attribute can be used to describe the item net amount for every transaction line in base currency.
Line Amount in Base Currency	This is a metric that can be used to describe a transaction line under the work order closes subject area. This specific attribute can be used to describe the line amount for every transaction line in base currency.
Line Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction line under the work order closes subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the item rate for every transaction line in base currency.
Credit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the work order closes subject area. This specific attribute can be used to describe the item net amount for every transaction line in base currency.
Debit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the work order closes subject area. This specific attribute can be used to describe the line amount for every transaction line in base currency.
Item Rate in Analytics Currency	This is a metric that can be used to describe a transaction line under the work order closes subject area. This specific attribute can be used to describe the item rate for every transaction line in analytics currency.
Item Net Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the work order closes subject area. This specific attribute can be used to describe the item net amount for every transaction line in analytics currency.
Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the work order closes subject area. This specific attribute can be used to describe the line amount for every transaction line in analytics currency.
Line Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction line under the work order closes subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the item rate for every transaction line in analytics currency.
Credit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the work order closes subject area. This specific attribute can be used to describe the item net amount for every transaction line in analytics currency.
Debit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the work order closes subject area. This specific attribute can be used to describe the line amount for every transaction line in analytics currency.

Metric	Metric Definition
Accounting Book Credit Amount	This is a metric that can be used to describe a transaction line under the work order closes subject area. This specific attribute can be used to describe the accounting book credit amount for every transaction line in accounting book currency.
Accounting Book Debit Amount	This is a metric that can be used to describe a transaction line under the work order closes subject area. This specific attribute can be used to describe the accounting book debit amount for every transaction line in accounting book currency.

NetSuite — Work Order Completion

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date basis is the work order completion date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Work Order Completions	This is a derived metric that can be used to describe a transaction under the work order completion subject area. This specific attribute is derived by the count of the total number of work order completions for transactions.
Total Amount in Transaction Currency	This is a metric that can be used to describe a transaction under the work order completion subject area. This specific attribute can be used to describe the total amount for transactions in transaction currency.
Total Amount in Base Currency	This is a metric that can be used to describe a transaction under the work order completion subject area. This specific attribute can be used to describe the total amount for transactions in base currency.
Total Amount in Analytics Currency	This is a metric that can be used to describe a transaction under the work order completion subject area. This specific attribute can be used to describe the total amount for transactions in analytics currency.
Total Number of Work Order Completion Lines	This is a derived metric that can be used to describe a transaction line under the work order completion subject area. This specific attribute is derived by the count of the total number of work order completion lines for every transaction line.
Item Quantity	This is a metric that can be used to describe a transaction line under the work order completion subject area. This specific attribute can be used to describe the item quantity for every transaction line.

Metric	Metric Definition
Line Estimated Gross Profit Percent	This is a metric that can be used to describe a transaction line under the work order completion subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the line estimated gross profit percent for every transaction line.
Item Rate in Transaction Currency	This is a metric that can be used to describe a transaction line under the work order completion subject area. This specific attribute can be used to describe the item rate for every transaction line in transaction currency.
Item Net Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the work order completion subject area. This specific attribute can be used to describe the item net amount for every transaction line in transaction currency.
Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the work order completion subject area. This specific attribute can be used to describe the line amount for every transaction line in transaction currency.
Line Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction line under the work order completion subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every transaction line in transaction currency.
Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the work order completion subject area. This specific attribute can be used to describe the amount credited for every transaction line in transaction currency.
Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the work order completion subject area. This specific attribute can be used to describe the amount debited for every transaction line in transaction currency.
Item Rate in Base Currency	This is a metric that can be used to describe a transaction line under the work order completion subject area. This specific attribute can be used to describe the item rate for every transaction line in transaction currency.
Item Net Amount in Base Currency	This is a metric that can be used to describe a transaction line under the work order completion subject area. This specific attribute can be used to describe the item net amount for every transaction line in transaction currency.
Line Amount in Base Currency	This is a metric that can be used to describe a transaction line under the work order completion subject area. This specific attribute can be used to describe the line amount for every transaction line in transaction currency.

Metric	Metric Definition
Line Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction line under the work order completion subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every base line in transaction currency.
Credit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the work order completion subject area. This specific attribute can be used to describe the amount credited for every transaction line in base currency.
Debit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the work order completion subject area. This specific attribute can be used to describe the amount debited for every transaction line in base currency.
Item Rate in Analytics Currency	This is a metric that can be used to describe a transaction line under the work order completion subject area. This specific attribute can be used to describe the item rate for every transaction line in analytics currency.
Item Net Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the work order completion subject area. This specific attribute can be used to describe the item net amount for every transaction line in analytics currency.
Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the work order completion subject area. This specific attribute can be used to describe the line amount for every transaction line in analytics currency.
Line Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction line under the work order completion subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every base line in analytics currency.
Credit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the work order completion subject area. This specific attribute can be used to describe the amount credited for every transaction line in analytics currency.
Debit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the work order completion subject area. This specific attribute can be used to describe the amount debited for every transaction line in analytics currency.
Accounting Book Credit Amount	This is a metric that can be used to describe a transaction line under the work order completion subject area. This specific attribute can be used to describe the accounting book credit amount for every transaction line in accounting book currency.

Metric	Metric Definition
Accounting Book Debit Amount	This is a metric that can be used to describe a transaction line under the work order completion subject area. This specific attribute can be used to describe the accounting book debit amount for every transaction line in accounting book currency.

NetSuite — Work Order Issue

These metrics are used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder, and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type are configured during product implementation. The exchange rate date basis is the workd orderissue date to convert to the analytics currency. Metrics in these folders show amounts in their respective currencies.

Metrics

Metric	Metric Definition
Total Number of Work Order Issues	This is a derived metric that can be used to describe a transaction under the work order issues subject area. This specific attribute is derived by the count of the total number of work order issues for transactions.
Total Number of Work Order Issue Lines	This is a derived metric that can be used to describe a transaction line under the work order issue subject area. This specific attribute is derived by the count of the total number of work order issue lines for every transaction line.
Item Quantity	This is a metric that can be used to describe a transaction line under the work order issue subject area. This specific attribute can be used to describe the item quantity for every transaction line.
Line Estimated Gross Profit Percent	This is a metric that can be used to describe a transaction line under the work order issue subject area. The estimated gross profit percent is calculated by subtracting the cost of goods sold from the total sales. This figure is then divided by net sales, to calculate the estimated gross profit margin in percentage terms. This specific attribute can be used to describe the line estimated gross profit percent for every transaction line.
Item Rate in Transaction Currency	This is a metric that can be used to describe a transaction line under the work order issue subject area. This specific attribute can be used to describe the item rate for every transaction line in transaction currency.
Item Net Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the work order issue subject area. This specific attribute can be used to describe the item net amount for every transaction line in transaction currency.
Line Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the work order issue subject area. This specific attribute can be used to describe the line amount for every transaction line in transaction currency.

Metric	Metric Definition
Line Estimated Gross Profit in Transaction Currency	This is a metric that can be used to describe a transaction line under the work order issue subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every transaction line in transaction currency.
Credit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the work order issue subject area. This specific attribute can be used to describe the amount credited for every transaction line in transaction currency.
Debit Amount in Transaction Currency	This is a metric that can be used to describe a transaction line under the work order issue subject area. This specific attribute can be used to describe the amount debited for every transaction line in transaction currency.
Item Rate in Base Currency	This is a metric that can be used to describe a transaction line under the work order issue subject area. This specific attribute can be used to describe the item rate for every transaction line in base currency.
Item Net Amount in Base Currency	This is a metric that can be used to describe a transaction line under the work order issue subject area. This specific attribute can be used to describe the item net amount for every transaction line in base currency.
Line Amount in Base Currency	This is a metric that can be used to describe a transaction line under the work order issue subject area. This specific attribute can be used to describe the line amount for every transaction line in base currency.
Line Estimated Gross Profit in Base Currency	This is a metric that can be used to describe a transaction line under the work order issue subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every transaction line in base currency.
Credit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the work order issue subject area. This specific attribute can be used to describe the amount credited for every transaction line in base currency.
Debit Amount in Base Currency	This is a metric that can be used to describe a transaction line under the work order issue subject area. This specific attribute can be used to describe the amount debited for every transaction line in base currency.
Item Rate in Analytics Currency	This is a metric that can be used to describe a transaction line under the work order issue subject area. This specific attribute can be used to describe the item rate for every transaction line in analytics currency.
Item Net Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the work order issue subject area. This specific attribute can be used to describe the item net amount for every transaction line in analytics currency.

Metric	Metric Definition
Line Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the work order issue subject area. This specific attribute can be used to describe the line amount for every transaction line in analytics currency.
Line Estimated Gross Profit in Analytics Currency	This is a metric that can be used to describe a transaction line under the work order issue subject area. The estimated gross profit is calculated by subtracting the cost of goods sold from the total sales. This specific attribute can be used to describe the line estimated gross profit for every transaction line in analytics currency.
Credit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the work order issue subject area. This specific attribute can be used to describe the amount credited for every transaction line in analytics currency.
Debit Amount in Analytics Currency	This is a metric that can be used to describe a transaction line under the work order issue subject area. This specific attribute can be used to describe the amount debited for every transaction line in analytics currency.
Accounting Book Credit Amount	This is a metric that can be used to describe a transaction line under the work order issue subject area. This specific attribute can be used to describe the accounting book credit for every transaction line in accounting book currency.
Accounting Book Debit Amount	This is a metric that can be used to describe a transaction line under the work order issue subject area. This specific attribute can be used to describe the accounting book debit for every transaction line in accounting book currency.

NetSuite — Work Order Snapshot

These metrics will be used in the Analytics Currency (AC) fact folder, Base Currency (BC) fact folder and Transaction Currency (TC) fact folder in Subject Areas. Analytics currency and exchange rate type will be configured during product implementation. Exchange rate date basis will be work order date to convert to analytics currency. Metrics in these folders will show amounts in their respective currencies.

Metric	Metric Definition
Total Number of Work Order Snapshots	This is a derived metric that is available to be used to describe a transaction under the NetSuite - Work Order Snapshot subject area. This specific attribute is derived by count of Total Number of Work Order Snapshots at each line level.

8
Prebuilt

Overview

This chapter provides information on all the prebuilt KPI's, decks, cards and analyses that are shipped as the standard offering along with the product.

Prebuilt Analyses

Overview

Prebuilt Analyses are the functional analysis defined using the data visualization functionality in Oracle Analytics Cloud (OAC).

These analyses only use Analytic Currency metrics. These tables show the summary of predefined analyses available for each module.

Financials

Analyses Detail	Analyses Description	Related Subject Areas
Spend	This workbook displays key sources of corporate spending by major category. Additional granularity is provided for supplier purchasing, department spend and for employee expenses.	NetSuite - Sales Order,NetSuite - Opportunity
Gross Margin	This workbook provides Gross Margin detail from Customer Invoice and Item Fulfillment transactions providing additional detail by subsidiary and product line.	
Project/s status	Project metrics are available in this workbook through the use of the charge type transaction. The visualizations display charge stages and charge forecasts in weekly and monthly increments.	

Industry Metrics

Analyses Detail	Analyses Description	Related Subject Areas
Services	This workbook displays Revenue analysis by class, subsidiary, and location. Additional insights are available about MRR, LTV, LTV to CAC, Churn, renewal rate, and monthly acquisition cost.	NetSuite - Revenue Arrangement, NetSuite - Sales Order, NetSuite - Journal

Inventory

Analyses Detail	Analyses Description	Related Subject Areas
Inventory Analysis	Helps to understand state of accuracy of inventory, transfer order and inventory transfers by location and adjustment amounts.	NetSuite - Inventory count, NetSuite - Inventory adjustment, NetSuite - Transfer order, NetSuite - Inventory transfer
Inventory Detailed Analysis	Provides visibility into inventory and its value by various statuses as well as inventory count details by location, subsidiary, class, etc.	NetSuite - Inventory Count, NetSuite-Sales Orders, NetSuite - Inventory Item Location Quantity,NetSuite - Item Fulfillment,NetSuite - Item Receipt,NetSuite - Purchase Order
Inventory Turnover Analysis	Displaying key insights into Cost of inventory, Inventory Turnover, Sold inventory, Ordered inventory by key dimensions such as subsidiary, location, From (location), To (location) etc.	NetSuite - Inventory Count, NetSuite-Sales Orders
Inventory Turnover Detailed Analysis	Displaying key insights into Cost of inventory, Inventory Turnover, Sold inventory, Ordered inventory by key dimensions such as subsidiary, location, From (location), To (location) etc.	NetSuite - Inventory Count, NetSuite-Customer Invoice,NetSuite - Inventory Snapshot,NetSuite - Inventory Item Location Quantity
Back Order Analysis Detail	Displays all the key metrics for back ordered items at item level and location level	NetSuite - Inventory Count, NetSuite-Sales Orders, NetSuite - Inventory Item Location Quantity
Back Order Detailed Analysis	Displays all the key metrics for back ordered items at item level and location level including backordered quantity and value	NetSuite - Inventory Count, NetSuite-Sales Orders, NetSuite - Inventory Item Location Quantity
Inventory Count Analysis	Shows all the inventory by classification along with other details.	NetSuite - Inventory Count
Inventory Count Detailed Analysis	Shows all the inventory by classification along with other details about inventory count at item and location level	NetSuite - Inventory Count
Inventory Transfer Detail	Displays all the inventory transfers by subsidiary	NetSuite - Transfer Order, NetSuite - Inventory Transfer

Analyses Detail	Analyses Description	Related Subject Areas
Inventory Transfer Detailed Analysis	Displays all the inventory transfers by subsidiary and other details such as transfer order amounts,location, etc.	NetSuite - Transfer Order, NetSuite - Inventory Transfer
Item Cost Detail	Shows Item cost vs purchase price as well as cost by various costing methods	NetSuite - Inventory Count,NetSuite - Purchase Order,NetSuite - Item Receipt
Item Cost Detailed Analysis	Shows Item cost vs purchase price as well as cost by various costing methods and other details around item cost	NetSuite - Inventory Count,NetSuite - Purchase Order,NetSuite - Item Receipt

Purchasing

Analyses Detail	Analyses Description	Related Subject Areas
Purchasing Analysis	Records what are the top vendors for purchase orders, top items for which returns are requested, rejected purchase contracts as well as requisitions that need approval.	NetSuite - Purchase order
Purchase Order Analysis	Displays trending of open purchase orders, Quarterly average costs and details about all purchase orders	NetSuite - Purchase Order
Purchase Order Detailed Analysis	Displays trending of open purchase orders, Quarterly average costs and details about all purchase orders	NetSuite - Purchase Order
Procurement Analysis Detail	Displays open Purchase Order amount by status and other PO details by Item	NetSuite - Purchase Order,NetSuite - Item Receipt,NetSuite - Vendor Bill,NetSuite - Vendor Bill Credit
Procurement Detailed Analysis	Displays open Purchase Order amount by status and other PO details at line level	NetSuite - Purchase Order,NetSuite - Item Receipt,NetSuite - Vendor Bill,NetSuite - Vendor Bill Credit
Requisition Analysis	Shows requisitions by subsidiary and location with time trending	NetSuite - Purchase Requisition
Requisition Detailed Analysis	Shows requisitions by subsidiary and location with time trending and details at line level	NetSuite - Purchase Requisition
Vendor Delivery Detail	Provides insight into vendor performance in terms of late deleiveries as well as POs received by location	NetSuite - Purchase Order
Vendor Delivery Detailed Analysis	Provides insight into vendor performance in terms of late deleiveries as well as other PO details at line level	NetSuite - Purchase Order
Vendor Payment Detail	Shows trends in vendor bill payments received and overdue vendor bills by location	NetSuite - Vendor Bill, NetSuite - Vendor Bill Payment
Vendor Payment Detailed Analysis	Shows trends in vendor bill payments received and overdue vendor bills by location and other details	NetSuite - Vendor Bill, NetSuite - Vendor Bill Payment

ORACLE®

Analyses Detail	Analyses Description	Related Subject Areas
Vendor Return Detailed Analysis	Compare vendor returns, return amount by location , item and time	NetSuite - Purchase Order,NetSuite - Vendor Return Authorization
Vendor Spend Analysis Details	Displays top 10 vendors spends by category, location and other details at Vendor bill line level	NetSuite - Vendor Bill, NetSuite - Vendor Bill Credit,NetSuite - Credit Card Charge
Vendor Spend Detailed Analysis	Displays top 10 vendors spends by category, location and other details	

Sales

Analyses Detail	Analyses Description	Related Subject Areas
Gross Margin	This workbook provides Gross Margin detail from Customer Invoice and Item Fulfillment transactions providing additional detail by subsidiary and product line.	NetSuite - Customer Invoice,NetSuite - Item Fulfillment

Prebuilt KPIs

Overview

KPIs are measurements that define and track specific business goals and objectives that often roll up into larger organizational strategies that require monitoring, improvement, and evaluation. You can use KPIs as an analysis in cards and decks so that users can view KPI performance and drill into the details to understand why a KPI value may be off the target. You can also use KPIs to automatically trigger alerts to specific users when KPI target values reach critical status levels. The Prebuilt KPIs only use Analytic Currency metrics.

Financials

KPI Name	KPI Description	Related Subject Areas
Payable Analysis	Records the amounts owed by the business to its creditors or suppliers. It appears on the balance sheet under current liabilities. It uses the Accounts Payable metric from GL Balance Sheet Subject Area.	NetSuite - Vendor Bill, NetSuite - Vendor Bill Credit
Receivable Analysis	Records the aggregate amount owed to the business by its customers, based on due amounts against underlying invoices.	NetSuite - Customer Invoice,NetSuite - Credit Memo

KPI Name	KPI Description	Related Subject Areas
COGS Analysis	Displays the operating expenses incurred by the business in day-to-day operations.	NetSuite - Vendor Bill, NetSuite - Vendor Bill Credit,NetSuite - Journal,NetSuite - GL Impact Adjustment,NetSuite - Item Receipt,NetSuite - Expense Report,NetSuite - Credit Card Charge
Cash Forecast	Displays forecasted cash receipts and outlays based on recorded GL transactions from the Balance Sheet.	NetSuite - Vendor Bill,NetSuite - Vendor Bill Payment,NetSuite - Vendor Bill Credit,NetSuite - Customer Invoice,NetSuite - Credit Memo,NetSuite - Credit Card Refund,NetSuite - Customer Payment,NetSuite - Credit Card Charge
DSO/DPO Analysis	Provides visibility into key financial metrics and the combined impact to cash conversion. The included metrics are: DSO, DPO, and DIO.	NetSuite - Vendor Bill, NetSuite - Vendor Bill Credit,NetSuite - Inventory Snapshot,NetSuite - Customer Payment,NetSuite - Vendor Bill Payment,NetSuite - Credit Memo,NetSuite - Customer Invoice

Sales

KPI Name	KPI Description	Related Subject Areas
Inventory Counts and Adjustments	This card summarizes the Inventory Counts and other Inventory Adjustments.	NetSuite - Inventory Count, NetSuite - Inventory Adjustment, NetSuite - Inventory Worksheet
Forecast Accuracy by Sales Rep	Compares the forecasted and actual goal accomplished by sales representatives.	NetSuite - Opportunity,NetSuite - Sales Order
Pipeline Analysis	Understanding the efficiency of sales function by analysing $$ amount and number of prospects at in various stages of conversion funnel	NetSuite - Opportunity,NetSuite - Sales Order
Top 10 Sold Items	Displays what are the top 10 sold Items	NetSuite - Customer Invoice,NetSuite - Sales Order
Sales by Top 10 Customers	Displays the volume and amount of sales for top 10 customers	NetSuite - Sales Order
Opportunity Win/Loss	Total amount and number of opportunities by status	NetSuite - Opportunity,NetSuite - Sales Order
Closed Sales Orders	This KPI tracks Sales Orders closed in the current period.	NetSuite - Return Authorization,NetSuite - Sales Order
Customer Payments	Shows the total amount in austomer Payments by subsidiary and company.	NetSuite - Customer Invoice,NetSuite - Customer Payment
Customer Return Authorizations	Displays Customer Return Authorizations by location.	NetSuite - Return Authorization,NetSuite - Sales Order
Overdue Customer Invoices	Displays total reamining balance from the Customer Invoices.	NetSuite - Customer Invoice

ORACLE

KPI Name	KPI Description	Related Subject Areas
Open Customer Invoices	Displays amounts and number of Open Customer Invoices	NetSuite - Customer Invoice,NetSuite - Sales Order
Item Fulfillments	Tracks the total number of item fulfillments by location	NetSuite - Item Fulfillment,NetSuite - Sales Order
Net Sales Orders	Net Sales Orders Closed/ Won and Open Order Status	NetSuite - Return Authorization,NetSuite - Sales Order

Purchasing

KPI Name	KPI Description	Related Subject Areas
Procurement Analysis	Displays a summary of key purchasing KPI cards related to core business operations including Purchase Orders and Vendor Bills.	Netsuite - Purchase Order,NetSuite - Item Receipt,Netsuite - Vendor Bill, NetSuite - Vendor Bill Credit,NetSuite - Credit Card Charge
Vendor Payments	Displays amount and timing of vendor payments.	NetSuite - Vendor Bill, NetSuite - Vendor Bill Payment,NetSuite - Credit Card Charge
Vendor Returns	Shows total amount corresponding to vendor returns	NetSuite - Vendor Return Authorization, NetSuite - Purchase Order
Purchase Orders	Total amount corresponding to open purchase orders and actual number of open purchase orders	NetSuite - Vendor Bill, NetSuite - Purchase Order,NetSuite - Item Receipt
Requisitions	Displays total amount of purchase requisitions	NetSuite - Vendor Bill, NetSuite - purchase Order,NetSuite - Purchase Requisition
Vendor Spend Analysis	Review overall vendor spend for all purchase types.	NetSuite - Vendor Bill,NetSuite - Vendor Bill Credit,NetSuite - Credit Card Charge
Back Order Analysis	Review Open Sales Orders where Back Ordering of Items is required	NetSuite - Sales Order
Vendor Delivery Timing	Measure and review vendor delivery timing.	NetSuite - Purchase Order

Inventory

KPI Name	KPI Description	Related Subject Areas
Item Cost Analysis	Track historic costs of inventory items	NetSuite - Item Receipt,NetSuite - Purchase Order
Shipments Geo Map	Displays the total number of items shipment by GEO	NetSuite - Item Fulfillment,NetSuite - Sales Order
Inventory Turnover	How much inventory we sold vs ordered in a given period of time	NetSuite - Customer Invoice,NetSuite - Sales Order,NetSuite - Item Fulfillment,NetSuite - Inventory Snapshot, NetSuite - Inventory Item Location Quantity

KPI Name	KPI Description	Related Subject Areas
Available Inventory	Total number of items available and corresponding value of each item	NetSuite - Inventory Item Location Quantity
Inventory Transfers	This card tracks inventory transfers between locations and subsidiaries.	NetSuite - Inventory Transfer,NetSuite - Transfer Order

Prebuilt Decks and Cards

Overview

Decks are composed of cards, and like physical cards, can be organized in ways that make the most sense based on the card contents. You can add as many as eight cards to a deck. Cards are the presentation medium for KPI data. Key Performance Indicators (KPIs) represent a comprehensive view of performance against a specific organization objective.

Prebuilt Decks and Cards - Financials

Deck Name	Deck Description
Financial	Provides visibility into the top-level KPI cards associated with the Posting things real time to Ledgers.

Prebuilt Decks and Cards - Inventory

Deck Name	Deck Description
Inventory	Provides visibility into top-level KPI cards associated with management of inventory.

Prebuilt Decks and Cards - NetSuite

Deck Name	Deck Description
Order Management	Provides visibility into top-level KPI cards associated with Order to Cash, Fulfillment workflow.
Sales Overview	Provides visibility into top-level KPI cards associated with Lead to order workflow.
Procurement	Provides visibility into top-level KPI cards associated with buying goods and services from vendors.
Inventory	Provides visibility into top-level KPI cards associated with management of inventory.
Financial	Provides visibility into the top-level KPI cards associated with the Posting things real time to Ledgers.

Prebuilt Decks and Cards - Purchasing

Deck Name	Deck Description
Procurement	Provides visibility into top-level KPI cards associated with buying goods and services from vendors.

Prebuilt Decks and Cards - Sales

Deck Name	Deck Description
Order Management	Provides visibility into top-level KPI cards associated with Order to Cash, Fulfillment workflow.
Sales Overview	Provides visibility into top-level KPI cards associated with Lead to order workflow.

A
Frequently Asked Questions

Refer to these Frequently Asked Questions if you have questions about the behavior of NetSuite Analytics Warehouse.

Topics

- How is net sales calculated?
- What are the transaction types covered in the Net Sales Items fact?
- What are the use cases and possible filter recommendations for the Net Sales Items fact?

How is net sales calculated?

The Net Sales Items fact provides a comprehensive picture of the sales items and adjusted returns. Transactions that are considered for Item Sales consist of sales order, customer invoice, and cash sales. Returns transactions that are considered consist of sales return and cash refund. The Net Sales Items fact has a compound grain consisting of Transaction identifier, Item identifier, and Accounting Book identifier. It also contains additional calculated information such as origin of the transaction in the form of type of transaction (sales order, customer invoice, and cash sales), the actual sales quantity after adjusting for returns, and whether the entry is adjusted for returns (flag attribute).

What are the transaction types covered in the Net Sales Items fact?

Regardless of whether there are multiple linked transactions for the same sales, the Net Sales Items fact holds just one entry for each item sales; the starting transaction and its quintessential information. In case of the item sales starting with Sales Order transaction, the quintessential information of this sale is from Sales Order transaction only. In case of the sales with no sales order, but started with an Invoice or a Cash Sale, then the quintessential information of this entry is Invoice transaction or Cash Sale transaction.

What are the use cases and possible filter recommendations for the Net Sales Items fact?

The sample use cases and filter recommendations for the Net Sates Items fact are:

- Net sales items reporting use case of all potential sales (including unsuccessful sales): No filter required.
- Net sales items reporting use case wherein the sales are closed and are going to close (not including unsuccessful sales): Filters recommended for Deposit Cash Sales, Paid Customer Invoices, Billed Sales Orders, and Closed Sales Orders.
- Net sales items reporting use case that depicts lost sales: Filters recommended for Unapproved Payment Cash Sales, Rejected and Void Invoices, and Canceled Sales Orders.
- Net sales reporting use case wherein the sales are pending approval: Filters recommended for Pending Approval Sales.
